Detail Report

CR Number: 2024239001 **Implementation Date:** 02-Dec-25 Related CR: 2024239001

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Off label use implied, but not specifically stated*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Off label use implied, but not specifically stated is not approved after suspension. The concept has been added as new PT Suspected off label use with relevant LLT options in Batch 20122009.

CR Number: 2024269012 **Implementation Date:** 02-Dec-25 Related CR: 2024269012

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Intentional product prescribing issue*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Intentional product prescribing issue is not approved after suspension. The concept has been added as new PT Suspected off label use with relevant LLT options in Batch 20122009.

CR Number: 2025020002 **Implementation Date:** 07-Aug-25 Related CR: 2025020002

Change Requested	Add a New HLT	Final Disposition	Final Placement	MedDRA Code #
Proposed HLT	*Tobacco, nicotine and smokable substances use*	Rejected After Suspension		
To HLGT	*Lifestyle issues*			

MSSO Comment: The proposal to add a new HLT Tobacco, nicotine and smokable substances use to HLGT Lifestyle issues is not approved after suspension. Upon further review, the current HLT Tobacco use is sufficient to represent the underlying concepts. No changes will be made to the MedDRA hierarchy at this time. As the terminology evolves and additional relevant concepts are added, the HLT name will be reevaluated at that time.

Detail Report

CR Number: 2025020003 **Implementation Date:** 07-Aug-25 Related CR: 2025020003

Change Requested	Merge HLT	Final Disposition	Final Placement	MedDRA Code #
HLT to merge	*Tobacco use*	Rejected After Suspension		
To HLT	*Tobacco, nicotine and smokable substances use*			

MSSO Comment: The proposal to merge HLT Tobacco use to HLT Tobacco, nicotine and smokable substances use is not approved after suspension. Upon further review, the current HLT Tobacco use is sufficient to represent the underlying concepts. No changes will be made to the MedDRA hierarchy at this time. As the terminology evolves and additional relevant concepts are added, the HLT name will be reevaluated at that time. See related request in change request number 2025020002.

CR Number: 2025030002 **Implementation Date:** 05-Dec-25 Related CR: 2025030002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Drug administered for unapproved indication*	Rejected After Suspension		

MSSO Comment: The proposal to add a new LLT Drug administered for unapproved indication is not approved after suspension. Use and administration in the particular context of "unapproved indication" are synonymous. Having the two concepts at PT level would cause confusion.

CR Number: 2025030003 **Implementation Date:** 05-Dec-25 Related CR: 2025030003

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Product administered for unapproved indication*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Product administered for unapproved indication is not approved after suspension. Use and administration in the particular context of "unapproved indication" are synonymous. Having the two concepts at PT level would cause confusion.

Detail Report

CR Number: 2025042001 **Implementation Date:** 06-Aug-25 Related CR: 2025042001

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Product use in unapproved country*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Product use in unapproved country is not approved after suspension. The proposed concept is not clearly conveying the issue you describe, as it is the product which gets approved not the country. Please reconsider naming of the term to more precisely convey the scenario.

CR Number: 2025142006 **Implementation Date:** 08-Aug-25 Related CR: 2025142006

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Replication competent lentivirus test*	Approved Not as Requested After Suspension	Proposed LLT		
			Replication competent lentivirus test	10092971	Current
			To PT		
			Replication competent retrovirus test	10092970	

MSSO Comment: The proposal to add a new PT Replication competent lentivirus test is approved but not as requested after suspension. Lentiviruses are a genus of the broader family of retroviruses. Replication competent lentivirus test will be added as an LLT to a new PT Replication competent retrovirus test, which will be added, in a related change, to HLT Virus identification and serology as a counterpart to existing PT Replication competent retrovirus test positive.

CR Number: 2025220043 **Implementation Date:** 08-Aug-25 Related CR: 2025142006

CR Number: 2025142007 **Implementation Date:** 08-Aug-25 Related CR: 2025142007

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Replication competent lentivirus test positive*	Approved Not as Requested After Suspension	Proposed LLT		
From PT	*Lentivirus test positive*		*Replication competent lentivirus test positive*	10089814	Current
			From PT		
			Lentivirus test positive	10070248	
			To PT		
			Replication competent retrovirus test positive	10080513	

MSSO Comment: The proposal to promote the LLT Replication competent lentivirus test positive from PT Lentivirus test positive is approved but not as requested after suspension. Lentiviruses are a genus of the broader family of retroviruses. LLT Replication competent lentivirus test positive will be moved from PT Lentivirus test positive to PT Replication competent retrovirus test positive for better alignment.

CR Number: 2025142008 **Implementation Date:** 08-Aug-25 Related CR: 2025142008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Uncontrolled CAR T cell proliferation*	Rejected After Suspension		

MSSO Comment: The proposal to add a new term Uncontrolled CAR T cell proliferation is not approved after suspension. Uncontrolled CAR T-cell proliferation refers to the excessive and unregulated growth of genetically modified immune cells (CAR T-cells) after infusion into a patient and as such is perceived as a condition and less as an investigative representation concept. Please reconsider representation of the concept other than an investigative term.

CR Number: 2025143007 **Implementation Date:** 10-Dec-25 Related CR: 2025143007

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Small intestine malignant tumour*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Small intestine malignant tumour is not approved after suspension. The concept Small intestine malignant tumour exists in terms such as LLT Malignant neoplasm of small intestine, unspecified, as "neoplasm" and "tumor" are considered synonym terms. In addition, MedDRA uses "cancer" and "carcinoma" as synonyms as described in the Introductory Guide. Based on legacy data considerations, no change to the carcinoma in the PT name will be done. A separate PT will not be added to avoid signal dispersion because of two very similar terms. For review of indications, please consider doing the analysis at the LLT level.

CR Number: 2025143008 **Implementation Date:** 10-Dec-25 Related CR: 2025143008

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Gastrointestinal malignant tumour*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Gastrointestinal malignant tumour is not approved after suspension. The concept Gastrointestinal malignant tumour exists as LLT Gastrointestinal neoplasm malignant, as "neoplasm" and "tumor" are considered synonym terms. In addition, MedDRA uses "cancer" and "carcinoma" as synonyms as described in the Introductory Guide. Based on legacy data considerations, no change to the carcinoma in the PT name will be done. A separate PT will not be added to avoid signal dispersion because of two very similar terms. For review of indications, please consider doing the analysis at the LLT level.

CR Number: 2025143009 **Implementation Date:** 10-Dec-25 Related CR: 2025143009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Pancreas malignant tumour*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Pancreas malignant tumour is not approved after suspension. The concept Pancreas malignant tumour exists as LLT Malignant neoplasm of pancreas, as "neoplasm" and "tumor" are considered synonym terms. In addition, MedDRA uses "cancer" and "carcinoma" as synonyms as described in the Introductory Guide. Based on legacy data considerations, no change to the carcinoma in the PT name will be done. A separate PT will not be added to avoid signal dispersion because of two very similar terms. For review of indications, please consider doing the analysis at the LLT level.

CR Number: 2025147044 **Implementation Date:** 26-Nov-25 Related CR: 2025147044

Change Requested	Add a new SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed SMQ	*Corneal Epitheliopathy*	Rejected After Suspension		

MSSO Comment: The proposal to add a new SMQ Corneal Epitheliopathy is not approved after suspension. An international team of regulatory and industry representatives (ICH M1 Points to Consider (PtC) Working group) evaluated this request and does not recommend the development of this SMQ. The group considers the existing Corneal disorders (SMQ) relevant and sufficient for retrieval of cases for further analysis for corneal epithelial disorders. Alternatively, terms from the existing Corneal disorders (SMQ) could be grouped in a modified MedDRA Query based on an SMQ.

Detail Report

CR Number: 2025153000 **Implementation Date:** 30-Jun-25 Related CR: 2025153000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Osteochondroplasty*	Approved as Requested	Proposed PT	
			Osteochondroplasty	10092791
			HLT primary	
			Joint therapeutic procedures	10023221
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Osteochondroplasty is approved as requested. Osteochondroplasty is a surgical procedure to repair and reshape damaged joint surfaces. The procedure is performed arthroscopically as a minimally invasive procedure. Osteochondroplasty will be added as PT to HLT Joint therapeutic procedures.

CR Number: 2025153001 **Implementation Date:** 30-Jun-25 Related CR: 2025153001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Hypotonic duodenography*	Approved as Requested	Proposed LLT		
			Hypotonic duodenography	10092794	Current
			To PT		
			Enterography	10092793	

MSSO Comment: The proposal to add a new term Hypotonic duodenography is approved as requested. Duodenography is defined as radiography of the duodenum using barium as a contrast medium, while hypotonic duodenography is a method for showing duodenal anatomy without interference from peristaltic activity. It involves duodenal intubation, drug-induced atony, and visualization with barium and air. Hypotonic duodenography will be added as LLT to new PT Enterography. In a related change, new PT Enterography will be added to HLT Gastrointestinal and abdominal imaging procedures.

CR Number: 2025182002 **Implementation Date:** 01-Jul-25 Related CR: 2025153001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Gastrodoudenal embolization*	Approved Not as Requested	Proposed LLT		
			Gastroduodenal artery embolization	10092795	Current
			To PT		
			Gastroduodenal artery embolisation	10092792	

MSSO Comment: The proposal to add a new term Gastrodoudenal embolization is approved but not as requested. Gastroduodenal artery embolization is a minimally invasive procedure used to stop bleeding from the gastroduodenal artery, often due to peptic ulcers or pseudoaneurysms. The proposed term will be modified for clarity and spelling then added as LLT Gastroduodenal artery embolization to new PT Gastroduodenal artery embolisation which, in a related change, will be linked to HLT Arterial therapeutic procedures (excl aortic).

CR Number: 2025182001 **Implementation Date:** 01-Jul-25 Related CR: 2025153002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Intracardiac echocardiography*	Approved as Requested	Proposed LLT		
			Intracardiac echocardiography	10092796	Current
			To PT		
			Echocardiogram	10014113	

MSSO Comment: The proposal to add a new term Intracardiac echocardiography is approved as requested. Intracardiac echocardiography is a unique imaging modality able to provide high-resolution real-time visualization of cardiac structures, continuous monitoring of catheter location within the heart, and early recognition of procedural complications, such as pericardial effusion or thrombus formation. Intracardiac echocardiography will be added as LLT to PT Echocardiogram.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Facetogenic pain*	Approved Not as Requested	Proposed LLT		
			Facet joint pain	10092797	Current
			To PT		
			Back pain	10003988	

MSSO Comment: The proposal to add a new term Facetogenic pain is approved but not as requested. Facetogenic pain refers to pain originating from the facet joints, which are small joints located between the vertebrae in the spine. Proposed term will be modified to the form most commonly referenced in medical literature and added as LLT Facet joint pain to PT Back pain.

CR Number: 2025153905 **Implementation Date:** 01-Jul-25 Related CR: 2025153905

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Exertional desaturation*	Approved as Requested	Proposed LLT		
			Exertional desaturation	10092790	Current
			To PT		
			Hypoxia	10021143	

MSSO Comment: The proposal to add a new LLT Exertional desaturation is approved as requested. Exertional desaturation is defined as a measurable drop in oxygen saturation (SpO2) during physical activity (usually defined as a drop of ≥4% or SpO2 falling below 88% during exertion). Exertional desaturation will be added as sub-concept LLT to PT Hypoxia.

CR Number: 2025153906 **Implementation Date:** 27-Jun-25 Related CR: 2025153906

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Bacterial wound abscess*	Rejected		

MSSO Comment: The proposal to add a new term Bacterial wound abscess is not approved. Bacterial wound abscess is a term including a qualifier for the abscess and the pathogen. MedDRA tries to limit the inclusion of multi-qualifier terms. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding coding approaches/considerations.

CR Number: 2025154000 **Implementation Date:** 27-Jun-25 Related CR: 2025154000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Tick bite fever*	Rejected		

MSSO Comment: The proposal to add a new LLT Tick bite fever is not approved. The proposed term is a non-specific term and may refer to numerous conditions due to a bite of a tick such as African tick bite fever, Colorado tick fever or spotted fevers. The existing LLT/PT Tick-borne fever may be used for a general term when the causative organism is not known.

CR Number: 2025154001 **Implementation Date:** 30-Jun-25 Related CR: 2025154001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Cutaneous exanthema*	Rejected		

MSSO Comment: The proposal to add a new LLT Cutaneous exanthema is not approved. Exanthema is defined as a disease in which skin eruptions or rashes are a prominent manifestation. The proposed term "cutaneous exanthema" is redundant, as exanthema by definition refers to a widespread rash that appears on the skin. The adjective cutaneous adds no additional clinical meaning and is therefore unnecessary. The proposed term may be represented by existing LLT Skin rash or LLT Exanthema.

CR Number: 2025154002 **Implementation Date:** 30-Jun-25 Related CR: 2025154002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Bilateral carpal tunnel syndrome*	Approved as Requested	Proposed LLT	
			Bilateral carpal tunnel syndrome	10092799 Current
			To PT	
			Carpal tunnel syndrome	10007697

MSSO Comment: The proposal to add a new LLT Bilateral carpal tunnel syndrome is approved as requested. Bilateral carpal tunnel syndrome is not a simple peripheral mononeuropathy of both median nerves but complex disorder with possible involvement of central mechanisms, genetic factors and anatomic anomalies. It is more common than unilateral carpal tunnel syndrome, but significantly more often begins or is more strongly expressed in the dominant hand. Bilateral carpal tunnel syndrome will be added as LLT to PT Carpal tunnel syndrome.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*High anterior resection*	Approved Not as Requested	Proposed LLT		
			High anterior rectal resection	10092800	Current
			To PT		
			Proctocolectomy	10059848	

MSSO Comment: The proposal to add a new LLT High anterior resection is approved but not as requested. High anterior resection is a type of colectomy, sometimes also referred to as sigmoid colectomy or simply sigmoidectomy, where the sigmoid colon is removed, along with the upper rectum and a portion of the left colon. The proposed term will be modified for clarity and added as LLT High anterior rectal resection to PT Proctocolectomy aligned with LLT Recto-sigmoidectomy.

CR Number: 2025154004 **Implementation Date:** 27-Jun-25 Related CR: 2025154004

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Arboviral encephalitis*	Approved as Requested	Proposed LLT		
			Arboviral encephalitis	10092798	Current
			To PT		
			Encephalitis viral	10014612	

MSSO Comment: The proposal to add a new LLT Arboviral encephalitis is approved as requested. Arboviruses, also known as arthropod-borne viruses, refer to a diverse group of viruses that are transmitted via mosquitos, ticks, or sandflies. Arboviral encephalitis are mosquito-borne diseases that can cause neurological symptoms in humans and animals. Arboviral encephalitis will be added as sub-concept LLT to PT Encephalitis viral aligned with LLT Arthropod-borne viral encephalitis.

CR Number: 2025154005 **Implementation Date:** 27-Jun-25 Related CR: 2025154005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Norovirus test negative*	Approved as Requested	Proposed PT	
			Norovirus test negative	10092801
			HLT primary	
			Virus identification and serology	10047490
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term Norovirus test negative is approved as requested. Norovirus test negative is the negatively qualified counterpart of existing terms LLT/PT Norovirus test and LLT/PT Norovirus test positive and will be added as a new PT to HLT Virus identification and serology.

CR Number: 2025154006 **Implementation Date:** 30-Jun-25 Related CR: 2025154006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Paraneoplastic fever*	Rejected		

MSSO Comment: The proposal to add a new term Paraneoplastic fever is not approved. Fever is a widespread symptom with many causes. Although fever is a common representation of tumor-derived cytokine release (e.g., IL-1, IL-6, TNF-alpha), it is usually not a pathognomonic sign of malignancies on its own. MedDRA limits the inclusion to those combination terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding coding approaches/considerations.

CR Number: 2025154007 **Implementation Date:** 30-Jun-25 Related CR: 2025154007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Rhinovirus disease*	Rejected		

MSSO Comment: The proposal to add a new term Rhinovirus disease is not approved. In medical contexts, viral illnesses are usually described as "infections" rather than "diseases" unless they cause more systemic or severe illness (e.g., "HIV infection" vs. "AIDS").

Detail Report

CR Number: 2025154008 **Implementation Date:** 01-Jul-25 Related CR: 2025154008

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Benign familial infantile epilepsy*	Approved as Requested	Proposed PT	
HLT primary	*Neurological disorders congenital NEC*		*Benign familial infantile epilepsy*	10092802
SOC primary	*Congenital, familial and genetic disorders*		HLT primary	
			Neurological disorders congenital NEC	10029300
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Seizures and seizure disorders NEC	10039912
			SOC secondary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Benign familial infantile epilepsy to primary HLT Neurological disorders congenital NEC in SOC Congenital, familial and genetic disorders is approved as requested. Benign familial infantile epilepsy is a genetic epileptic syndrome characterized by the occurrence of afebrile repeated seizures in healthy infants, between the third and eighth month of life. Benign familial infantile epilepsy will be added as PT to primary HLT Neurological disorders congenital NEC and secondary HLT Seizures and seizure disorders NEC. In a related change, for PT Benign familial neonatal convulsions, the secondary HLT will be changed from HLT Generalised tonic-clonic seizures to HLT Seizures and seizure disorders NEC for better alignment.

Proposed PT	*RegiSCAR*	Approved Not as Requested	Proposed PT	
HLT primary	*Dermatitis ascribed to specific agent*		*RegiSCAR score*	10092803
SOC primary	*Skin and subcutaneous tissue disorders*		HLT primary	
			Skin histopathology and skin investigations NEC	10087056
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT RegiSCAR to primary HLT Dermatitis ascribed to specific agent in SOC Skin and subcutaneous tissue disorders and secondary HLT Investigations NEC in SOC Investigations is approved but not as requested. The RegiSCAR scoring system is used to diagnose drug reaction with eosinophilia and systemic symptoms (DRESS) syndrome. It assesses various clinical, laboratory, and timing criteria, including fever, lymphadenopathy, eosinophilia, atypical lymphocytes, widespread skin rash with possible facial edema, internal organ involvement, prolonged resolution, and exclusion of alternative causes. Based on the total score, a case is classified as definite, probable, possible, or not a DRESS case. The proposed term will be modified for clarity and added as PT RegiSCAR score to HLT Skin histopathology and skin investigations NEC.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Immune effector cell-associated enterocolitis*	Rejected		
HLT primary	*Colitis (excl infective)*			
SOC primary	*Gastrointestinal disorders*			

MSSO Comment: The proposal to add a new PT Immune effector cell-associated enterocolitis to primary HLT Colitis (excl infective) in SOC Gastrointestinal disorders is not approved. To avoid overpopulation, MedDRA refrains from adding combination terms, unless they are distinct internationally well characterized and recognized diagnostic entities. This concept, although well described in one high impact publication, does not seem to have reached broad acceptance yet. Please consider coding to the most specific existing MedDRA term. The proposed term was rejected in change request 2024306001 and change request 2024351000.

CR Number: 2025156000 **Implementation Date:** 30-Jun-25 Related CR: 2025156000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Leptomeningitis*	Approved as Requested	Proposed LLT	
			Leptomeningitis	10092805 Current
			To PT	
			Meningitis	10027199

MSSO Comment: The proposal to add a new LLT Leptomeningitis is approved as requested. Leptomeningitis, which is more commonly referred to as meningitis, represents inflammation of the subarachnoid space (i.e. arachnoid mater and pia mater) caused by an infectious or non-infectious process. Leptomeningitis will be added as LLT to PT Meningitis.

CR Number: 2025156005 **Implementation Date:** 30-Jun-25 Related CR: 2025156005

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Intraepithelial melanoma*	Rejected		
To PT	*Malignant melanoma stage 0*			

MSSO Comment: The proposal to add a new LLT Intraepithelial melanoma to PT Malignant melanoma stage 0 is not approved. The specific in-situ concept is available in MedDRA as LLT Malignant melanoma in situ to PT Malignant melanoma stage 0.

Detail Report

CR Number: 2025156006 **Implementation Date:** 30-Jun-25 Related CR: 2025156006

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Vocal cord cyst removal*	Approved Not as Requested	Proposed PT	
			Vocal cord cyst removal	10092804
			HLT primary	
			Laryngeal therapeutic procedures	10023847
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new LLT Vocal cord cyst removal is approved but not as requested. Vocal cord cyst removal is a delicate microsurgical procedure with the goal to preserve the vocal cord's vibratory function and minimize scarring to ensure optimal voice recovery. Vocal cord cyst removal will be added as PT to HLT Laryngeal therapeutic procedures.

CR Number: 2025157000 **Implementation Date:** 01-Jul-25 Related CR: 2025157000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Low-luminance deficit*	Approved as Requested	Proposed PT	
			Low-luminance deficit	10092806
			HLT primary	
			Visual impairment and blindness (excl colour blindness)	10080708
			SOC primary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new term Low-luminance deficit is approved as requested. Low-luminance deficit (LLD) is defined as the difference between visual acuity measured under standard (photopic) lighting conditions and visual acuity measured under low-luminance conditions (typically using a neutral density filter). It quantifies how much a person's visual performance declines when light levels are reduced, and is used as a sensitive indicator of early retinal dysfunction. Low-luminance deficit will be added as PT to the HLT Visual impairment and blindness (excl colour blindness). In a related change, the PT Low luminance best-corrected visual acuity decreased will be demoted under this new PT Low-luminance deficit.

Proposed Term	*Laparoscopic extraperitoneal adenomectomy (millin)*	Approved Not as Requested	Proposed LLT		
			Laparoscopic extraperitoneal adenomectomy	10092809	Current
			To PT		
			Prostate adenoma removal	10065313	

MSSO Comment: The proposal to add a new term Laparoscopic extraperitoneal adenomectomy (millin) is approved but not as requested. Laparoscopic extraperitoneal adenomectomy is a minimally invasive surgical procedure to remove a prostatic adenoma through an extraperitoneal approach, typically used to treat benign prostatic hyperplasia. It is used to remove a central adenoma while preserving the outer part of the gland and its capsule. The requested term will be modified by removing parentheses and added as LLT Laparoscopic extraperitoneal adenomectomy to newly promoted PT Prostate adenoma removal. In a related change, LLT Prostate adenoma removal will be promoted from PT Prostatectomy to a PT level linked to HLT Prostatic therapeutic procedures.

Proposed LLT	*Ilium-sigmoid fistula*	Approved Not as Requested	Proposed LLT		
			Iliac-sigmoid fistula	10092810	Current
			To PT		
			Arterioenteric fistula	10070296	

MSSO Comment: The proposal to add a new LLT Ilium-sigmoid fistula is approved but not as requested. An iliac-sigmoid fistula is an abnormal connection between the iliac artery—usually the common or external iliac—and the sigmoid colon, and it is most frequently secondary to iliac artery aneurysms. This rare and potentially life-threatening condition typically presents with gastrointestinal bleeding, which may be massive and recurrent, along with abdominal pain. The proposed term will be modified for clarity and added as LLT Iliac-sigmoid fistula to PT Arterioenteric fistula.

Proposed LLT	*Cree leukoencephalopathy*	Approved as Requested	Proposed LLT		
			Cree leukoencephalopathy	10092812	Current
			To PT		
			Vanishing white matter disease	10092811	

MSSO Comment: The proposal to add a new LLT Cree leukoencephalopathy is approved as requested. Vanishing white matter disease (VWMD), also known as childhood ataxia with central hypomyelination, is an autosomal recessive leukoencephalopathy. It is caused by mutations in the genes EIF2B1–5 that are involved in initiation and regulation of protein synthesis. VWMD is characterized by a slow progressive deterioration of white matter often exacerbated by infectious episodes or minor head injuries. Cree leukoencephalopathy will be added as a synonym LLT under the new PT Vanishing white matter disease, which will be added, in a related change to primary HLT Cerebral disorders congenital and to secondary HLT Leukodystrophies.

			RUCAM score	10092813
			HLT primary	
			Hepatobiliary function diagnostic procedures	10087057
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT RUCAM Score is approved but not as requested. The RUCAM method is a structured scale used to assess the likelihood that a drug or herbal product caused liver injury. It assigns points to clinical, biochemical, and exclusion-based criteria. RUCAM is widely used in clinical practice and pharmacovigilance studies due to its objectivity and reproducibility. The requested term will be modified in accordance with MedDRA capitalization conventions and will be added as PT RUCAM score to HLT Hepatobiliary function diagnostic procedures. In a related change, the spelled out name of the test, Roussel Uclaf causality assessment method score will be added as LLT to PT RUCAM score.

			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Vascular malformations and acquired anomalies	10047091
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new PT Acquired renal arteriovenous fistula is approved as requested. A renal arteriovenous fistula is an abnormal direct connection between a renal artery and vein. When acquired, it often results after biopsy or trauma, but can also be idiopathic. It can be asymptomatic or cause hematuria, hypertension, or high-output heart failure. Acquired renal arteriovenous fistula will be added as PT with a primary link to HLT Renal vascular and ischaemic conditions and to secondary HLT Urinary tract procedural complications and to secondary HLT Vascular malformations and acquired anomalies.

			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT Intestinal ultrasound to primary HLT Gastrointestinal and abdominal imaging procedures in SOC Investigations is approved as requested. Intestinal ultrasound is a transabdominal examination of the colon and small intestine using high-resolution ultrasound technique.

CR Number: 2025161000 **Implementation Date:** 30-Jun-25 Related CR: 2025161000

Change Requested	Change Status of LLT	Final Disposition	Final Placement	MedDRA Code #
LLT to change	*Contraceptive failure with injectable contraceptive*	Rejected		
Status	*non-current*			

MSSO Comment: The proposal to change status of LLT Contraceptive failure with injectable contraceptive to non-current is not approved. Contraceptive failure with injectable contraceptives refers to a situation where pregnancy occurs despite using injectable birth control correctly or incorrectly. The term does not necessarily imply that the drug was not effective but is a descriptive term. The cause of failure can be due to a number of causes, including delayed or missed injections, incorrect administrations, drug interactions. The LLT Contraceptive failure with injectable contraceptive is another scenario under HLT Unintended pregnancies.

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Lung infection*	Rejected		
From PT	*Pneumonia*			

MSSO Comment: The proposal to promote the LLT Lung infection from PT Pneumonia is not approved. The term lung infection is a broad and non-specific descriptor that encompasses various infectious processes within the pulmonary parenchyma. However, in clinical practice, it is rarely used in a precise or diagnostic context. Instead, it is often used as a colloquial or provisional expression frequently used interchangeably and synonymously for pneumonia. In addition, also due to the frequency of the term and impact on legacy data the current placement will remain.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Atlantodental osteoarthritis*	Approved Not as Requested	Proposed LLT		
			Atlanto-odontoid osteoarthritis	10092828	Current
			To PT		
			Spinal osteoarthritis	10041591	

MSSO Comment: The proposal to add a new term Atlantodental osteoarthritis is approved but not as requested. Atlantodental osteoarthritis is a degenerative joint condition affecting the atlanto-odontoid (atlanto-dens) joint between the atlas (C1) and the odontoid process of the axis (C2) vertebra. It can lead to neck pain, reduced range of motion, and potentially spinal cord compression due to joint space narrowing, osteophyte formation, or ligamentous changes. The proposed term will be modified for clarity and will be added as LLT Atlanto-odontoid osteoarthritis to PT Spinal osteoarthritis.

CR Number: 2025164001 **Implementation Date:** 30-Jun-25 Related CR: 2025164001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Canalicular laceration*	Approved Not as Requested	Proposed PT	
			Lacrimal canalicular laceration	10092826
			HLT primary	
			Eye injuries NEC	10027674
			SOC primary	
			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Lid, lash and lacrimal structural disorders	10024446
			SOC secondary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new term Canalicular laceration is approved but not as requested. Trauma to the face may result in damage to the lacrimal drainage system. Dog bites are a common cause of canalicular lacerations because of the propensity of this type of injury to occur near the medial canthus as are blunt shear injuries. The proposed term will be modified for clarity and added as PT Lacrimal canalicular laceration to primary HLT Eye injuries NEC and to secondary HLT Lid, lash and lacrimal structural disorders.

Proposed Term	*Metatarsal phalangeal joint fusion:*	Approved Not as Requested	Proposed LLT		
			Metatarsal phalangeal joint fusion	10092827	Current
			To PT		
			Arthrodesis	10061683	

MSSO Comment: The proposal to add a new term Metatarsal phalangeal joint fusion: is approved but not as requested. Metatarsophalangeal (MTP) joint fusion is a surgical procedure that permanently joins the bones of the toe and foot at the MTP joint to relieve pain and improve stability, typically in cases of severe arthritis or deformity. The proposed term will be modified by removal of the colon and added as LLT Metatarsal phalangeal joint fusion to PT Arthrodesis.

Proposed Term	*Bursa neuroma complex*	Approved Not as Requested	Proposed LLT		
			Morton's neuroma-bursal complex	10092829	Current
			To PT		
			Morton's neuralgia	10052288	

MSSO Comment: The proposal to add a new term Bursa neuroma complex is approved but not as requested. The majority of patients who have a Morton's neuroma also have fluid around the "peri-neural oedema" nerve. This can build up to form a bursa. The hypoechoic heterogeneous mass that is referred to as a Morton neuroma is really a "neuroma-bursal complex" that is much larger than the actual neuroma itself. Proposed term will be modified for clarity and added as LLT Morton's neuroma-bursal complex to PT Morton's neuralgia.

CR Number: 2025167005 **Implementation Date:** 01-Jul-25 Related CR: 2025167005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Hepatic flexure mobilisation*	Approved as Requested	Proposed PT

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Schwartz-matsuo syndrome*	Approved Not as Requested	Proposed PT	
			Schwartz-Matsuo syndrome	10092832
			HLT primary	
			Retinal structural change, deposit and degeneration	10038896
			SOC primary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new term Schwartz-matsuo syndrome is approved but not as requested. It is a rhegmatogenous retinal detachment that, in addition to separating the retina, causes the release of pigment epithelial cells and photoreceptors into the aqueous humor. These cells obstruct the trabecular meshwork and raise intraocular pressure, resulting in a secondary glaucoma with mild inflammation. The proposed term will be modified with correct capitalization and added as PT Schwartz-Matsuo syndrome to HLT Retinal structural change, deposit and degeneration.

CR Number: 2025168002 **Implementation Date:** 01-Jul-25 Related CR: 2025168002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #

			Nervous system disorders	10029205
			HLT secondary	
			Immune and associated conditions NEC	10027682
			SOC secondary	
			Immune system disorders	10021428

MSSO Comment: The proposal to add a new PT Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome to primary HLT Central nervous system inflammatory disorders NEC in SOC Nervous system disorders is approved but not as requested. Progressive multifocal leukoencephalopathy (PML) can occur in the context of immune reconstitution inflammatory syndrome (IRIS). In AIDS patients on antiretroviral therapy who present with focal neurological deficits or altered mental status along with non-contrast enhancing lesions, a diagnosis of PML IRIS ought to be considered. This condition can present from 1 week to 26 months after the initiation of HAART. Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome will be added as PT to primary HLT Polyomavirus infections and to secondary HLT Demyelinating disorders NEC, to secondary HLT Immune and associated conditions NEC and to secondary HLT Withdrawal and rebound effects.

			Scleral depression	10092839
			HLT primary	
			Ophthalmic histopathology and imaging procedures	10030866
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Scleral indentation/scleral depression is approved but not as requested. Scleral depression, also known as scleral indentation or indentation ophthalmoscopy, is a supplemental ophthalmic technique used to examine the peripheral retina. It involves applying gentle pressure to the sclera to displace the vitreous humor, thereby facilitating visualization of peripheral retinal pathologies. The requested term will be modified to separate the two slashed synonym expressions and added as the PT Scleral depression to the HLT Ophthalmic histopathology and imaging procedures. In a related change, Scleral indentation will be added as a synonym LLT to PT Scleral depression.

Proposed PT	*Sagging eye syndrome*	Approved Not as Requested	Proposed PT	
HLT primary	*Ocular nerve and muscle disorders*		*Sagging eye syndrome*	10092841
SOC primary	*Eye disorders*		HLT primary	
			Orbital structural change, deposit and degeneration	10031055
			SOC primary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new PT Sagging eye syndrome to primary HLT Ocular nerve and muscle disorders in SOC Eye disorders is approved but not as requested. Sagging eye syndrome is a condition primarily affecting older adults, causing double vision due to strabismus. It is characterized by the drooping or inferomedial displacement of the lateral rectus muscle, a muscle responsible for outward eye movement. This displacement results from the degeneration of connective tissues in the eye. Sagging eye syndrome will be added as PT to HLT Orbital structural change, deposit and degeneration, which better represents the etiology.

CR Number: 2025171002 **Implementation Date:** 01-Jul-25 Related CR: 2025171002

Proposed Term	*Retinal ischemic perivascular lesions*	Approved Not as Requested	Proposed LLT		
			Retinal ischemic perivascular lesion	10092850	Current
			To PT		
			Retinal ischaemia	10038871	

MSSO Comment: The proposal to add a new term Retinal ischemic perivascular lesions is approved but not as requested. Retinal ischemic perivascular lesions are typically associated with conditions that impair retinal blood flow, such as diabetic retinopathy, retinal vein occlusion, hypertensive retinopathy, systemic vasculitis, and sickle cell disease. They can appear as cotton wool spots, which represent localized infarcts of the nerve fiber layer, or as areas of capillary non-perfusion seen on fluorescein angiography, and may also include retinal hemorrhages or microaneurysms near the affected vessels. The proposed term will be modified to its singular form and added as LLT Retinal ischemic perivascular lesion, along with its British English spelled counterpart LLT Retinal ischaemic perivascular lesion, to the PT Retinal ischaemia.

To PT	*Neoplasm progression*		From PT		
			Neoplasm	10028980	
			To PT		
			Neoplasm progression	10061309	

MSSO Comment: The proposal to move the LLT Neoplasm growth accelerated from PT Neoplasm to PT Neoplasm progression is approved as requested. Neoplasm growth accelerated is better represented under Neoplasm progression because it implies an active worsening of the disease, not merely the presence of a neoplasm. Accelerated growth reflects a dynamic change (such as increased malignancy or treatment resistance) which aligns with the concept of progression. In an associated change, and for the very same reasons, the LLT Malignant neoplasm growth accelerated will be moved from PT Neoplasm malignant to PT Malignant neoplasm progression.

			Subacute subdural hematoma	10092853	Current
			To PT		
			Subdural haematoma	10042361	

MSSO Comment: The proposal to add a new term Sub acute subdural hematoma is approved but not as requested. Subacute subdural hematoma is known as the gradual pooling of blood in the subdural space that occurs in the period of 4-21 days from the head injury. Usually, it is caused by trauma. This collection causes compression on the brain which leads to the production of localized neurological manifestations, increased intracranial pressure, or altered level of consciousness. Proposed term will be modified for spelling and added as LLT Subacute subdural hematoma to PT Subdural haematoma. In a related change, the British English spelled counterpart LLT Subacute subdural haematoma will also be added to PT Subdural haematoma.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Transplant associated thrombotic microangiopathy*	Approved as Requested	Proposed PT	
HLT primary	*Coagulopathies*		*Transplant associated thrombotic microangiopathy*	10092857
SOC primary	*Blood and lymphatic system disorders*		HLT primary	
			Coagulopathies	10053567
			SOC primary	
			Blood and lymphatic system disorders	10005329
			HLT secondary	
			Renal vascular and ischaemic conditions	10038543
			SOC secondary	
			Renal and urinary disorders	10038359
			HLT secondary	
			Non-site specific embolism and thrombosis	10014524
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new PT Transplant associated thrombotic microangiopathy to primary HLT Coagulopathies in SOC Blood and lymphatic system disorders is approved as requested. Transplant-associated thrombotic microangiopathy is an increasingly recognized complication of hematopoietic stem cell transplant (HSCT) with high morbidity and mortality. The triad of endothelial cell activation, complement dysregulation, and microvascular hemolytic anemia has the potential to cause end organ dysfunction, multiple organ dysfunction syndrome and death, but clinical features mimic other disorders following HSCT, delaying diagnosis. Transplant associated thrombotic microangiopathy will be added as PT to primary HLT Coagulopathies and to secondary HLT Renal vascular and ischaemic conditions, to secondary HLT Non-site specific embolism and thrombosis and secondary HLT Transplantation complications.

			SOC secondary	
			Immune system disorders	10021428

MSSO Comment: The proposal to add a new PT Cardiac allograft vasculopathy to primary HLT Transplantation complications in SOC Injury, poisoning and procedural complications is approved as requested. Cardiac allograft vasculopathy is a chronic form of cardiac graft rejection that affects transplant recipients. It is characterized by a diffuse and insidious proliferation of the intima in the graft's coronary arteries, which can involve both epicardial vessels and the microvasculature. Cardiac allograft vasculopathy will also be added to secondary HLT Coronary artery disorders NEC and to secondary HLT Transplant rejections.

Detail Report

CR Number: 2025180003 **Implementation Date:** 08-Jul-25 Related CR: 2025180003

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Diastolic hyperemia-free ratio*	Approved Not as Requested	Proposed PT	
HLT primary	*Cardiac function diagnostic procedures*		*Diastolic hyperaemia-free ratio*	10092858
SOC primary	*Investigations*		HLT primary	
			Cardiac function diagnostic procedures	10007566
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT Diastolic hyperemia-free ratio to primary HLT Cardiac function diagnostic procedures in SOC Investigations is approved but not as requested. The Diastolic hyperemia-free ratio (DFR) is a physiological index used in cardiac catheterization to assess the severity of coronary artery stenosis. DFR measures the pressure difference across a blockage during diastole without inducing artificial hyperemia with medications like adenosine. The proposed term will be modified into the British English spelling and added as PT Diastolic hyperaemia-free ratio to HLT Cardiac function diagnostic procedures. In a related change, the American English spelled counterpart LLT Diastolic hyperemia-free ratio will also be added to PT Diastolic hyperaemia-free ratio.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Neuronal electrophysiology*	Rejected		

MSSO Comment: The proposal to add a new LLT Neuronal electrophysiology is not approved. Neuronal electrophysiology is the study of the electrical properties of neurons. It involves measuring how neurons generate and transmit electrical signals which are essential for brain and nervous system function. Often this involves experimental ex-vivo settings. For human medical applications, please consider existing terms, like e.g. Electroencephalogram. If a term relevant for your scenario is missing, consider submitting the specific clinical investigation term in a change request.

CR Number: 2025181002 **Implementation Date:** 08-Jul-25 Related CR: 2025181002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Hypocreatininemia*	Rejected		

MSSO Comment: The proposal to add a new LLT Hypocreatininemia is not approved. Hypocreatininemia is usually not considered a clinically relevant entity but can be a clue for another underlying condition. Low serum creatinine can result from a wide range of unrelated conditions—such as reduced muscle mass, pregnancy, or fluid overload—each with distinct clinical implications. The concept exists in MedDRA as LLT/PT Blood creatinine decreased.

CR Number: 2025181003 **Implementation Date:** 08-Jul-25 Related CR: 2025181003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #

			Liver venous deprivation procedure	10092861
			HLT primary	
			Hepatic therapeutic procedures	10019704
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new LLT Liver venous deprivation is approved but not as requested. Liver venous deprivation combines hepatic vein embolization to the well-established portal vein embolization strategy for future liver remnant hypertrophy before major hepatectomy. The proposed term will be modified for clarity and added as PT Liver venous deprivation procedure to HLT Hepatic therapeutic procedure. In a related change, PT Portal vein embolisation will be moved from HLT Venous therapeutic procedures to HLT Hepatic therapeutic procedures for better alignment.

			Phosphorylated tau increased	10092864
			HLT primary	
			Neurologic diagnostic procedures	10029285
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Phosphorylated tau increased is approved but not as requested. Accumulation of phosphorylated tau is a key pathological feature of Alzheimer's disease. Phosphorylated tau accumulation causes synaptic impairment, neuronal dysfunction and formation of neurofibrillary tangles. Its presence correlates with the severity of cognitive decline, making it a key biomarker for early diagnosis and progression monitoring of Alzheimer’s disease. Phosphorylated tau increased will be added as PT to HLT Neurologic diagnostic procedures.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Local immune effector cell associated toxicity syndrome*	Rejected After Suspension		

MSSO Comment: The proposal to add a new LLT Local immune effector cell associated toxicity syndrome is not approved after suspension. Local immune effector cell-associated toxicity syndrome represents an immune reset mediated toxicity, which is organ-specific, starts days to weeks after CAR T-cell therapy. The concept is not yet fully established in medical literature and as such is only referenceable in a few medical articles. The same term was also rejected in change request 2025161005.

CR Number: 2025181008 **Implementation Date:** 08-Jul-25 Related CR: 2025181008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*High ventricular ectopic burden*	Approved Not as Requested	Proposed LLT		
			High burden of ventricular ectopy	10092865	Current
			To PT		
			Ventricular extrasystoles	10047289	

MSSO Comment: The proposal to add a new term High ventricular ectopic burden is approved but not as requested. High burden ventricular ectopy refers to a condition where there is a significantly elevated number of premature ventricular contractions (PVCs) in a patient's heart rhythm. While occasional PVCs are usually harmless, a high burden can be a sign of potential heart problems and may lead to complications like ectopy-mediated cardiomyopathy or even sudden cardiac arrest. Proposed term will be modified for clarity and added as LLT High burden of ventricular ectopy to PT Ventricular extrasystoles.

CR Number: 2025183000 **Implementation Date:** 08-Jul-25 Related CR: 2025183000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Cephalhematoma excision*	Approved as Requested	Proposed LLT		
			Cephalhematoma excision	10092877	Current
			To PT		
			Cephalhaematoma excision	10092869	

MSSO Comment: The proposal to add a new term Cephalhematoma excision is approved as requested. Cephalhematoma is a subperiosteal collection of blood which occurs mainly as the result of birth trauma. It usually develops in the parietal eminence and does not extend past the suture line. The treatment strategy of most cephalhematoma is conservative. However, in cases of ossified cephalhematoma causing skull deformities, surgical management is indicated. Cephalhematoma excision will be added as LLT to a new British English spelled counterpart PT Cephalhaematoma excision which will be added, in a related change, to HLT Skull and brain therapeutic procedures.

			Subperiosteal hematoma	10092873	Current
			To PT		
			Periosteal haematoma	10077341	

MSSO Comment: The proposal to add a new term Subperiosteal hematoma is approved as requested. A subperiosteal hematoma occurs between the periosteum and the cortex of a bone and is, therefore, geographically limited to the affected bone. Subperiosteal hematomas have been described in the calvarium, iliac bone, humerus, femur and tibia. Subperiosteal hematoma will be added as LLT to PT Periosteal haematoma as the terms are often used interchangeably. In a related change, its British English spelled counterpart LLT Subperiosteal haematoma will also be added to PT Periosteal haematoma.

Proposed Term	*Frontal calvarial erosion/calvarial destruction*	Approved Not as Requested	Proposed LLT		
			Calvarial erosion	10092872	Current
			To PT		
			Bone erosion	10051728	

MSSO Comment: The proposal to add a new term Frontal calvarial erosion/calvarial destruction is approved but not as requested. Frontal calvarial erosion refers to the thinning or loss of bone in the frontal portion of the skull (calvaria), often visible on imaging studies as focal defects or irregularities. It can be associated with conditions such as metastatic disease, multiple myeloma, or inflammatory disorders affecting the skull. The proposed term will be modified to represent a broader concept and added as LLT Calvarial erosion to PT Bone erosion.

CR Number: 2025183006 **Implementation Date:** 08-Jul-25 Related CR: 2025183006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Calvarial lesion*	Rejected		

MSSO Comment: The proposal to add a new term Calvarial lesion is not approved. MedDRA refrains from adding lesion terms, as generally, a broad “lesion” term only adds an additional imprecise term to existing “disorder” concepts.

CR Number: 2025183007 **Implementation Date:** 08-Jul-25 Related CR: 2025183007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Squamous cell carcinoma of colon*	Approved as Requested	Proposed LLT		
			Squamous cell carcinoma of colon	10092874	Current
			To PT		
			Colon cancer	10009944	

MSSO Comment: The proposal to add a new term Squamous cell carcinoma of colon is approved as requested. Squamous cell carcinoma (SCC) of the gastrointestinal tract is an extremely rare clinical entity and usually involves the esophagus or anal canal. Few cases of SCC of the colon have been reported in the literature and they represent 0.1% of colon cancer cases. Squamous cell carcinoma of colon will be added as an LLT to PT Colon cancer.

Proposed Term	*Posterior lumbar interbody fusion surgery/ plif surgery*	Approved Not as Requested	Proposed LLT		
			Posterior lumbar interbody fusion surgery	10092886	Current
			To PT		
			Spinal fusion surgery	10050505	

MSSO Comment: The proposal to add a new term Posterior lumbar interbody fusion surgery/ plif surgery is approved but not as requested. Posterior lumbar interbody fusion is a spine surgery that stabilizes the lower back by removing a damaged disc and fusing adjacent vertebrae through a posterior approach. Bone grafts and implants are placed in the disc space to promote fusion and restore spinal stability. The proposed term will be modified to select the clearer of the two names proposed and added as LLT Posterior lumbar interbody fusion to PT Spinal fusion surgery, aligned with existing LLT Transforaminal lumbar interbody fusion.

CR Number: 2025183010 **Implementation Date:** 08-Jul-25 Related CR: 2025183010

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Posterolateral lumbar fusion/posterolateral gutter spine fusion surgery*	Approved Not as Requested	Proposed LLT		
			Posterolateral lumbar fusion surgery	10092885	Current
			To PT		
			Spinal fusion surgery	10050505	

MSSO Comment: The proposal to add a new term Posterolateral lumbar fusion/posterolateral gutter spine fusion surgery is approved but not as requested. Posterolateral lumbar fusion, also called posterolateral gutter spine fusion surgery, is a procedure to fuse adjacent vertebrae in the lower back by placing bone grafts in the posterolateral space outside the spine (the posterolateral gutters). Unlike interbody fusion, the disc is not removed; instead, fusion occurs between the transverse processes, usually supported with screws and rods for stability. The proposed term will be modified to separate the two names proposed and added as LLT Posterolateral lumbar fusion surgery to PT Spinal fusion surgery. In a related change, the synonym term Posterolateral gutter spine fusion surgery will also be added as LLT to PT Spinal fusion surgery.

			Rhinitis sicca	10092884 Current
			To PT	
			Rhinitis atrophic	10039088

MSSO Comment: The proposal to add a new term Rhinitis sicca is approved as requested. Rhinitis sicca is a synonym of dry rhinitis, often associated with atrophic or chronic inflammatory changes in the nasal mucosa. Rhinitis sicca will be added as LLT to PT Rhinitis atrophic.

Detail Report

CR Number: 2025183015 **Implementation Date:** 08-Jul-25 Related CR: 2025183015

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pseudomonas folliculitis*	Approved as Requested	Proposed PT	
			Pseudomonas folliculitis	10092880
			HLT primary	
			Pseudomonal infections	10037132
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Skin and subcutaneous tissue infections NEC	10040793
			SOC secondary	
			Skin and subcutaneous tissue disorders	10040785

MSSO Comment: The proposal to add a new term Pseudomonas folliculitis is approved as requested. Pseudomonas folliculitis is a skin infection of the hair follicles caused by Pseudomonas aeruginosa, typically acquired through exposure to contaminated water in hot tubs, pools, or saunas. It usually presents as itchy red papules or pustules, often appearing in areas covered by swimwear. Pseudomonas folliculitis will be added as PT with a primary link to HLT Pseudomonal infections and a secondary link to HLT Skin and subcutaneous tissue infections NEC.

CR Number: 2025183016 **Implementation Date:** 08-Jul-25 Related CR: 2025183016

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Hot tub folliculitis*	Rejected		

MSSO Comment: The proposal to add a new term Hot tub folliculitis is not approved. This infection is sufficiently well represented with the PT Pseudomonas folliculitis added in change request 2025183015 and its synonym LLT Hot tub rash added in change request 2025183016.

CR Number: 2025183018 **Implementation Date:** 08-Jul-25 Related CR: 2025183018

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Leiomyomatosis peritonealis disseminata*	Approved as Requested	Proposed PT	
			Leiomyomatosis peritonealis disseminata	10092879
			HLT primary	
			Peritoneal and retroperitoneal disorders	10034653
			SOC primary	
			Gastrointestinal disorders	10017947

MSSO Comment: The proposal to add a new term Leiomyomatosis peritonealis disseminata is approved as requested. Leiomyomatosis peritonealis disseminata is a rare, benign condition characterized by multiple smooth muscle nodules scattered throughout the peritoneum. It typically affects women of reproductive age and is often estrogen-dependent. Although it can mimic peritoneal carcinomatosis radiologically, it lacks malignant features histologically. Leiomyomatosis peritonealis disseminata will be added as PT to the HLT Peritoneal and retroperitoneal disorders.

CR Number: 2025183021 **Implementation Date:** 08-Jul-25 Related CR: 2025183021

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Rectal pressure*	Approved Not as Requested	Proposed LLT		
			Rectal pressure sensation	10092868	Current
			To PT		
			Anorectal discomfort	10068286	

MSSO Comment: The proposal to add a new LLT Rectal pressure is approved but not as requested. The term "rectal pressure" in a consumer complaint typically refers to a subjective sensation of fullness, heaviness, or pressure in the rectum. The proposed term will be modified for clarity and added as LLT Rectal pressure sensation to PT Anorectal discomfort.

			Premature fontanelle closure	10092866
			HLT primary	
			Musculoskeletal and connective tissue deformities of skull, face and buccal cavity	10028378
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395

MSSO Comment: The proposal to add a new term Premature fontanelle closure is approved as requested. The anterior fontanelle usually closes between 10 and 24 months. Premature fontanelle closure is the early ossification of a skull fontanelle before the normal age range, which may be associated with abnormal skull or brain development. Premature fontanelle closure will be added as a PT to HLT Musculoskeletal and connective tissue deformities of skull, face and buccal cavity.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Psoriasis alba*	Approved Not as Requested After Suspension	Proposed LLT		
			Interdigital psoriasis	10092928	Current
			To PT		
			Psoriasis	10037153	

MSSO Comment: The proposal to add a new term Psoriasis alba is approved but not as requested after suspension. Interdigital psoriasis of the feet ("psoriasis alba") is considered a rare form of inverse psoriasis. Interdigital psoriasis of the feet is often missed and is commonly mistaken for interdigital fungal infection as it usually presents as characteristic whitish and sodden plaques or patches. The proposed term will be modified to reflect the form most commonly found in literature and added as LLT Interdigital psoriasis to PT Psoriasis.

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Immune-mediated hypopituitarism*	Approved as Requested	Proposed LLT	
From PT	*Immune-mediated hypophysitis*		*Immune-mediated hypopituitarism*	10090937
			From PT	
			Immune-mediated hypophysitis	10085025
			HLT primary	
			Anterior pituitary hypofunction	10002701
			SOC primary	
			Endocrine disorders	10014698
			HLT secondary	
			Immune and associated conditions NEC	10027682
			SOC secondary	
			Immune system disorders	10021428

MSSO Comment: The proposal to promote the LLT Immune-mediated hypopituitarism from PT Immune-mediated hypophysitis is approved as requested. Immune-mediated hypophysitis is inflammation of the pituitary gland caused by immune system activity, often detectable on imaging. Immune-mediated hypopituitarism refers to the resulting hormone deficiencies caused by immune-related damage to the pituitary, whether or not inflammation is still present. To align with other hypophysitis and hypopituitarism concepts in MedDRA, LLT Immune-mediated hypopituitarism will be promoted from under PT PT Immune-mediated hypophysitis to PT level and added to primary HLT Anterior pituitary hypofunction and secondary HLT Immune and associated conditions NEC.

CR Number: 2025185000 **Implementation Date:** 09-Jul-25 Related CR: 2025185000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Trachelitis*	Rejected		
To PT	*Cervix inflammation*			

MSSO Comment: The proposal to add a new LLT Trachelitis to PT Cervix inflammation is not approved. The proposed term is an outdated synonym of LLT/PT Cervicitis, in addition it may be confused with LLT/PT Tracheitis.

Detail Report

CR Number: 2025185001 **Implementation Date:** 09-Jul-25 Related CR: 2025185001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Granular parakeratosis*	Approved as Requested	Proposed LLT	
			Granular parakeratosis	10092892 Current
			To PT	
			Parakeratosis	10058318

MSSO Comment: The proposal to add a new LLT Granular parakeratosis is approved as requested. Granular parakeratosis is a rare skin-limited dermatosis. It is characterized by scaly eruptions, most commonly in intertriginous areas, with characteristic histopathologic features. The hallmark is retention of keratohyalin granules with parakeratosis in the stratum corneum. Granular parakeratosis will be added as an LLT to PT Parakeratosis.

CR Number: 2025186000 **Implementation Date:** 09-Jul-25 Related CR: 2025186000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Seronegative intestinal villous atrophy*	Approved Not as Requested	Proposed LLT		
HLT primary	*Gastrointestinal mucosal dystrophies and secretion disorders*		*Seronegative intestinal villous atrophy*	10092893	Current
			To PT		
SOC primary	*Gastrointestinal disorders*		*Intestinal mucosal atrophy*	10067745	

MSSO Comment: The proposal to add a new PT Seronegative intestinal villous atrophy to primary HLT Gastrointestinal mucosal dystrophies and secretion disorders in SOC Gastrointestinal disorders is approved but not as requested. Seronegative intestinal villous atrophy refers to the thinning or disappearance of the villi in the small intestine when a person has negative celiac disease antibody tests. While often associated with celiac disease, seronegative villous atrophy can also be caused by other conditions, making diagnosis challenging. Seronegative intestinal villous atrophy will be added as an LLT to PT Intestinal mucosal atrophy. In a related change, PT Intestinal mucosal atrophy will be moved from HLT Gastrointestinal disorders NEC to HLT Gastrointestinal mucosal dystrophies and secretion disorders. Furthermore, PT Intestinal villi atrophy will be demoted under PT Intestinal mucosal atrophy for better alignment.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Mucorrhea*	Rejected		

MSSO Comment: The proposal to add a new LLT Mucorrhea is not approved. The proposed term is too broad and may refer to different body systems. Please consider using LLT Rectal mucous secretion or LLT Mucous discharge and the most relevant anatomically specific term such as LLT Cervical discharge, depending upon your case scenario.

CR Number: 2025188002 **Implementation Date:** 09-Jul-25 Related CR: 2025188002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Boari bladder flap*	Approved as Requested	Proposed LLT		
			Boari bladder flap	10092891	Current
			To PT		
			Ureteroneocystostomy	10052686	

MSSO Comment: The proposal to add a new LLT Boari bladder flap is approved as requested. A Boari bladder flap is one of the options for ureteric reimplantation when the diseased ureteric segment is long (e.g. more than 5 cm). It is useful in the management of lower ureteric strictures and can be performed as either an open or laparoscopic procedure. It involves tubularisation of a flap of bladder to extend from the bladder to the ureteral orifice. Boari bladder flap will be added as sub-concept LLT to PT Ureteroneocystostomy.

Proposed Term	*Periprosthetic joint infection*	Approved as Requested	Proposed PT	
			Periprosthetic joint infection	10092896
			HLT primary	
			Bone and joint infections	10005940
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Musculoskeletal procedural complications	10028392
			SOC secondary	
			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Bone and joint infections (excl arthritis)	10005941
			SOC secondary	
			Musculoskeletal and connective tissue disorders	10028395

MSSO Comment: The proposal to add a new term Periprosthetic joint infection is approved as requested. Periprosthetic joint infection (PJI) is a unique clinical entity, markedly different from infections involving native bones or joints. PJIs are classified according to when they occur in relation to the insertion of the prosthetic joint. Periprosthetic joint infection will be added as PT to primary HLT Bone and joint infections, to secondary HLT Musculoskeletal procedural complications and to secondary HLT Bone and joint infections (excl arthritis).

Proposed LLT	*Vitreous particles*	Approved After Suspension	Proposed LLT	
			Vitreous particles	10092992 Current
			To PT	
			Vitreous floaters	10047654

MSSO Comment: The proposal to add a new LLT Vitreous particles is approved as requested after suspension. Although the expression vitreous particles is not a formal diagnostic term, it is used descriptively to refer to particulate matter observed within the vitreous humor of the eye. This term is commonly applied in the context of postoperative findings—such as after cataract or vitreoretinal surgery—where it may denote lens fragments, blood, inflammatory cells, or silicone oil droplets. It is also used in reference to degenerative or inflammatory eye conditions like uveitis or vitreous hemorrhage, where debris or pigment may appear as particles. Vitreous particles will be added as an LLT to PT Vitreous floaters.

Change Requested	Demote a PT	Final Disposition	Final Placement	MedDRA Code #
PT to merge	*Acute interstitial pneumonitis*	Rejected		
To PT	*Interstitial lung disease*			

MSSO Comment: The proposal to demote the PT Acute interstitial pneumonitis under PT Interstitial lung disease is not approved. MedDRA is providing specific and general terms for coding purposes. Interstitial lung disease is a grouping term which encompasses primary pathologic processes usually affecting the interstitial of the lungs. The term is valuable as a general description. Acute interstitial pneumonitis is a specific disorder, which along with other specific diagnoses is adequately represented at the PT level.

CR Number: 2025190002 **Implementation Date:** 10-Jul-25 Related CR: 2025190002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Infantile paralysis*	Rejected		
To PT	*Poliomyelitis*			

MSSO Comment: The proposal to add a new LLT Infantile paralysis to PT Poliomyelitis is not approved. Polio is extremely rare globally at present and the term proposed is outdated. Besides, the risk for misinterpretation of this older term outweighs the benefit of adding it as a synonym.

CR Number: 2025190006 **Implementation Date:** 26-Nov-25 Related CR: 2025190006

Change Requested	Add a new SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed SMQ	*Drug exposure via parent (DEVP)*	Rejected After Suspension		

MSSO Comment: The proposal to add a new SMQ Drug exposure via parent (DEVP) is not approved after suspension. An international team of regulatory and industry representatives (ICH M1 Points to Consider (PtC) Working group) evaluated this request and does not recommend the development of this SMQ. The scope of the proposed SMQ encompasses a broad range of exposure scenarios that are more appropriately addressed through a comprehensive, database-specific case-retrieval strategy (including relevant non-MedDRA coded database fields). In addition, the current MedDRA hierarchy supports case retrieval through two relevant HLTs (HLT Exposures associated with pregnancy, delivery and lactation and HLT Foetal and neonatal conditions associated with product exposure).

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Anastomosing hemangioma*	Approved as Requested	Proposed LLT		
To PT	*Haemangioma*		*Anastomosing hemangioma*	10092901	Current
			To PT		
			Haemangioma	10018814	

MSSO Comment: The proposal to add a new LLT Anastomosing hemangioma to PT Haemangioma is approved as requested. Anastomosing hemangioma is a rare, benign (non-cancerous) vascular tumor that typically arises in the kidney or genitourinary tract, but it can also occur in other soft tissues like the liver, adrenal gland, or retroperitoneum. The name "anastomosing" refers to the network-like pattern of interconnected blood vessels seen under the microscope. In a related change, the British English spelled counterpart will be added as LLT Anastomosing haemangioma to PT Haemangioma.

Proposed Term	*Supraumbilical hernia*	Approved as Requested	Proposed LLT	
			Supraumbilical hernia	10092904 Current
			To PT	
			Para-umbilical hernia	10033747

MSSO Comment: The proposal to add a new term Supraumbilical hernia is approved as requested. In a supraumbilical hernia, a small part of abdominal tissue—usually fatty tissue and less commonly a loop of intestine—pushes through a weak spot in the abdominal muscles located just above the belly button, which results in a visible or palpable bulge that may become more noticeable when standing, coughing, or straining. Supraumbilical hernia will be added as LLT to the newly promoted PT Para-umbilical hernia. In a related change, LLT Para-umbilical hernia will be promoted from PT Umbilical hernia to a PT level under HLT Umbilical hernias.

Proposed Term	*Urachal calculi*	Approved Not as Requested	Proposed PT	
			Urachal calculus	10092903
			HLT primary	
			Genital and urinary tract disorders NEC	10027680
			SOC primary	
			Renal and urinary disorders	10038359

MSSO Comment: The proposal to add a new term Urachal calculi is approved but not as requested. Urachal anomalies (encompassing cysts, sinuses, diverticula, and patent urachus) can lead to complications such as infection, malignancy, and calculus. Urachal calculus - a very rare entity - is a lithiasis that forms within a urachal cyst or a urachal diverticulum, typically in the context of chronic inflammation or recurrent infection over a previous existing urachal anomaly. The proposed term will be modified into singular form and added as PT Urachal calculus to HLT Genital and urinary tract disorders NEC.

To HLT	*Coagulopathies*		*Pulmonary tumour thrombotic microangiopathy*	10079988
			To HLT	
			Coagulopathies	10053567

MSSO Comment: The proposal to link the PT Pulmonary tumour thrombotic microangiopathy to the HLT Coagulopathies is approved as requested. The thrombotic microangiopathy in pulmonary tumour thrombotic microangiopathy is a consequence of tumor cells metastasizing to the distal tiny arterioles, venules and lymphatics of the lungs. The embolized cells induce an intravascular procoagulant effect resulting in fibrocellular overgrowth of the intima and vasoconstriction.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Glisson's sheath edema*	Rejected		

MSSO Comment: The proposal to add a new term Glisson's sheath edema is not approved. The proposed concept is rarely referenced in literature. Glisson's sheath is the connective tissue ensheathing the portal vein, hepatic artery, and bile duct within the liver. Although the connective tissue surrounding the liver surface is known as Glisson's capsule, its structure and function are poorly understood, and a specific finding of the sheath is rarely mentioned.

CR Number: 2025195002 **Implementation Date:** 21-Jul-25 Related CR: 2025195002

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Dermatopolymyositis*	Rejected		

MSSO Comment: The proposal to add a new PT Dermatopolymyositis is not approved. Dermatomyositis is a type of polymyositis with characteristic inflammatory skin changes, including the Gottron sign. Dermatomyositis and polymyositis are both inflammatory myopathies, but dermatomyositis includes a characteristic skin rash alongside muscle weakness, while polymyositis primarily affects muscles. The proposed concept may be represented by the broad existing term, PT Dermatomyositis.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*HCN1 gene mutation*	Approved Not as Requested	Proposed PT	
HLT primary	*Gene mutations and other alterations NEC*		*HCN1 gene mutation*	10092906
SOC primary	*Congenital, familial and genetic disorders*		HLT primary	
			Neurological disorders congenital NEC	10029300
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Seizures and seizure disorders NEC	10039912
			SOC secondary	
			Nervous system disorders	10029205
			HLT secondary	
			Pervasive developmental disorders NEC	10034740
			SOC secondary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new PT HCN1 gene mutation to primary HLT Gene mutations and other alterations NEC in SOC Congenital, familial and genetic disorders is approved but not as requested. A mutation in the HCN1 gene affects the function of ion channels that regulate the electrical activity of neurons. These channels are important for brain signaling and heart rhythm. Mutations can lead to excessive or abnormal neuronal excitability, which may cause epilepsy, developmental delay, movement disorders, or sleep disturbances. Some mutations are inherited, while others occur de novo (new in the affected individual). HCN1 gene mutation will be added as PT with a primary link to Neurological disorders congenital NEC and secondary links to HLT Seizures and seizure disorders NEC and to HLT Pervasive developmental disorders NEC.

			Nervous system neoplasms benign NEC	10029210
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Nervous system neoplasms benign NEC	10029210
			SOC secondary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Lhermitte-Duclos disease to primary HLT Neuromas in SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) is approved but not as requested. Lhermitte-Duclos disease is a rare, benign cerebellar lesion characterized by abnormal ganglion cell growth and mass effect. It typically affects young adults and presents with symptoms of increased intracranial pressure. In practical terms, it can be classified as a benign tumor of the cerebellum, although its nature is more complex. MRI reveals a distinctive laminated pattern in the cerebellum. Around one third of adult cases are linked to germline PTEN mutations and Cowden syndrome; the rest are sporadic. Lhermitte-Duclos disease will be added as PT to primary HLT Nervous system neoplasms benign NEC, which is bi-axial to primary SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) and to secondary SOC Nervous system disorders.

			Cardiac disorders congenital NEC	10007542
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Cardiomyopathies	10007635
			SOC secondary	
			Cardiac disorders	10007541

MSSO Comment: The proposal to add a new PT Arrhythmogenic ventricular dysplasia to primary HLT Cardiac disorders congenital NEC in SOC Congenital, familial and genetic disorders and secondary HLT Cardiomyopathies in SOC Cardiac disorders is approved but not as requested. Arrhythmogenic cardiomyopathy (ACM) is a rare heart muscle disease where the heart's muscle tissue is progressively replaced by scar tissue and fat, leading to arrhythmias and potentially sudden cardiac death. It is often genetic and can affect primarily the right ventricle, left ventricle, or both. The proposed term will be modified to the most current form of the concept and added as PT Arrhythmogenic cardiomyopathy to primary HLT Cardiac disorders congenital NEC and to secondary HLT Cardiomyopathies. In a related change, PT Arrhythmogenic right ventricular dysplasia will be demoted under broader new PT Arrhythmogenic cardiomyopathy for better alignment.

			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Reproductive tract neoplasms NEC	10027697
			SOC secondary	
			Reproductive system and breast disorders	10038604

MSSO Comment: The proposal to add a new PT BRIP1 gene mutation to primary HLT Gene mutations and other alterations NEC in SOC Congenital, familial and genetic disorders is approved as requested. BRIP1 stands for BRCA1 Interacting Protein C-Terminal Helicase 1. A BRIP1 gene mutation is a change in a gene involved in DNA repair that can increase the risk of certain cancers, especially ovarian cancer. PT BRIP1 gene mutation will also be linked to secondary HLT Reproductive tract neoplasms NEC.

Proposed Term	*Uneven thyroid density*	Approved Not as Requested	Proposed LLT		
			Heterogeneous thyroid texture	10092911	Current
			To PT		
			Thyroid disorder	10043709	

MSSO Comment: The proposal to add a new term Uneven thyroid density is approved but not as requested. A heterogeneous texture of the thyroid is often associated with e.g., chronic autoimmune thyroiditis, multinodular goiter or subacute thyroiditis. It suggests varying tissue composition, fibrosis, inflammation, or nodularity, and is a sign of an underlying pathology. The proposed term will be modified for clarity and added as LLT Heterogeneous thyroid texture to PT Thyroid disorder.

CR Number: 2025197004 **Implementation Date:** 23-Jul-25 Related CR: 2025197004

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Brachial neuritis*	Approved as Requested	Proposed LLT

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Cytolethal distending toxin positive*	Approved as Requested	Proposed PT		
			Cytolethal distending toxin positive	10092912	
			HLT primary		
			Bacteria identification and serology (excl mycobacteria)	10004000	
			SOC primary		
			Investigations	10022891	

MSSO Comment: The proposal to add a new term Cytolethal distending toxin positive is approved as requested. The cytolethal distending toxin (CDT) is produced by many pathogenic gram-negative bacteria and is considered as a virulence factor. Altogether, these results suggest that CDT may contribute to virulence and pathogenicity by interfering with various cellular processes, leading to genomic instability and inflammation. Cytolethal distending toxin positive will be added as new PT to HLT Bacteria identification and serology (excl mycobacteria).

CR Number: 2025199000 **Implementation Date:** 23-Jul-25 Related CR: 2025199000

Change Requested	Change Status of LLT	Final Disposition	Final Placement	MedDRA Code #	
LLT to change	*Cough decreased*	Approved as Requested	LLT to change		
Status	*non-current*		*Cough decreased*	10011225	Non-Current
			Status		
			non-current		

MSSO Comment: The proposal to change status of LLT Cough decreased to non-current is approved as requested. The LLT Cough decreased describes a change in symptom severity, reflecting disease improvement in the course of the symptom. MedDRA does not usually add severity or course of disease qualifiers in the MedDRA term name, as these can be captured in other database fields. Additionally, mixing LLTs reflecting improvement and aggravation under the base PT makes analysis more complicated.

Proposed Term	*Mixed neuroendocrine-nonneuroendocrine neoplasm*	Approved Not as Requested	Proposed LLT		
			Mixed neuroendocrine non-neuroendocrine neoplasm	10092915	Current
			To PT		
			Neuroendocrine tumour	10052399	

MSSO Comment: The proposal to add a new term Mixed neuroendocrine-nonneuroendocrine neoplasm is approved but not as requested. Mixed Neuroendocrine–non-neuroendocrine neoplasms are rare tumors composed of both neuroendocrine and non-neuroendocrine components, each making up at least 30% of the lesion. They most often arise in the gastrointestinal tract or pancreas. Their behavior is usually aggressive, with prognosis and treatment guided by the more malignant component, typically the neuroendocrine part. The proposed term will be modified to the most commonly used form in literature and added as LLT Mixed neuroendocrine non-neuroendocrine neoplasm to PT Neuroendocrine tumour.

Proposed Term	*Blood fibrotest*	Rejected After Suspension		

MSSO Comment: The proposal to add a new term Blood fibrotest is not approved after suspension. The proposed term is a trademark name and may be represented by existing PT Hepatic fibrosis marker test. If this does not fulfill your need, please resubmit with a non-trademark term name which more precisely represents your concept.

CR Number: 2025202004 **Implementation Date:** 25-Jul-25 Related CR: 2025202004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Flexor tenosynovitis*	Approved Not as Requested	Proposed LLT		
			Hand flexor tenosynovitis	10092916	Current
			To PT		
			Tenosynovitis	10043261	

MSSO Comment: The proposal to add a new term Flexor tenosynovitis is approved but not as requested. Flexor tenosynovitis is an inflammation of the synovial sheath that surrounds the flexor tendons of the fingers. The proposed term will be modified for clarity and added as LLT Hand flexor tenosynovitis to PT Tenosynovitis.

CR Number: 2025202005 **Implementation Date:** 25-Jul-25 Related CR: 2025202005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Scrambler therapy*	Approved as Requested	Proposed LLT		
			Scrambler therapy	10092917	Current
			To PT		
			Peripheral nerve neurostimulation	10034587	

MSSO Comment: The proposal to add a new term Scrambler therapy is approved as requested. Scrambler therapy is a non-invasive treatment for chronic neuropathic and cancer-related pain. It delivers low-intensity electrical signals through the skin to mimic “non-pain” messages, aiming to retrain the nervous system. Electrodes are placed around the painful area, and the therapy is used in conditions like peripheral neuropathy, post-surgical pain, complex regional pain syndrome and sciatica. Scrambler therapy may be considered a sub-concept LLT to PT Peripheral nerve neurostimulation.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Oral erosive lichen planus*	Approved as Requested	Proposed LLT		
			Oral erosive lichen planus	10092913	Current
			To PT		
			Oral lichen planus	10030983	

MSSO Comment: The proposal to add a new term Oral erosive lichen planus is approved as requested. Oral erosive lichen planus is a chronic inflammatory condition affecting the mucous membranes of the mouth, characterized by painful, red, and sometimes ulcerated lesions. It is a more severe form of oral lichen planus. Oral erosive lichen planus will be added as LLT to PT Oral lichen planus.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Cardiac wall erosion*	Approved Not as Requested	Proposed LLT		
			Cardiac wall erosion associated with device	10092918	Current
			To PT		
			Cardiac complication associated with device	10069801	

MSSO Comment: The proposal to add a new PT Cardiac wall erosion is approved but not as requested. Device-related erosion, particularly in the context of cardiac devices used for atrial septal defect closure, is a rare but potentially serious complication. It occurs when the device, often due to improper sizing or deficient rims, rubs against the heart wall or other structures, leading to tissue damage and erosion. Proposed term will be modified for clarity and added as sub-concept LLT Cardiac wall erosion associated with device to PT Cardiac complication associated with device.

Proposed Term	*Elastofibroma dorsi*	Approved as Requested	Proposed LLT		
			Elastofibroma dorsi	10092919	Current
			To PT		
			Elastofibroma	10079215	

MSSO Comment: The proposal to add a new term Elastofibroma dorsi is approved as requested. Elastofibroma dorsi is a rare, benign, slow-growing tumor typically found beneath the scapula in older adults, especially women. It consists of fibrous tissue and abnormal elastic fibers mixed with fat and is usually unilateral but can be bilateral. Elastofibroma dorsi is an anatomical subtype of elastofibroma representing its most frequent anatomical collation and will be added as LLT to PT Elastofibroma.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Walking aid application*	Approved Not as Requested	Proposed LLT		
HLT primary	*Therapeutic procedures NEC*		*Walking aid support*	10092924	Current
SOC primary	*Surgical and medical procedures*		To PT		
			Mobility support	10092920	

MSSO Comment: The proposal to add a new PT Walking aid application to primary HLT Therapeutic procedures NEC in SOC Surgical and medical procedures is approved but not as requested. A walking aid is one of several devices a patient may be issued in order to improve their walking pattern, balance or safety while mobilizing independently. The proposed term will be modified for clarity and added as LLT Walking aid support to a new PT Mobility support added in change request 2025206001.

CR Number: 2025205004 **Implementation Date:** 29-Jul-25 Related CR: 2025205004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #

SOC primary	*Surgical and medical procedures*		HLT primary	
			Therapeutic procedures NEC	10027700
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new PT Orthosis application to primary HLT Therapeutic procedures NEC in SOC Surgical and medical procedures is approved as requested. An orthosis is a mechanical device applied to the body in order to support a body segment, correct anatomical alignment, protect a body part, or assist motion.

CR Number: 2025205005 **Implementation Date:** 29-Jul-25 Related CR: 2025205005

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Exacerbation of pulmonary fibrosis*	Rejected		
To PT	*Pulmonary fibrosis*			

MSSO Comment: The proposal to add a new LLT Exacerbation of pulmonary fibrosis to PT Pulmonary fibrosis is not approved. MedDRA generally refrains from adding course of disease descriptors. Pulmonary fibrosis does not typically evolve through exacerbations in the same way that conditions like COPD or asthma do. Instead, it usually follows a progressive course, with gradual worsening of symptoms (especially dyspnea and cough) over months to years.

CR Number: 2025206000 **Implementation Date:** 29-Jul-25 Related CR: 2025206000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Interspinous ligament swelling*	Approved as Requested	Proposed PT	
			Interspinous ligament swelling	10092926
			HLT primary	
			Ligament disorders	10052774
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395

MSSO Comment: The proposal to add a new term Interspinous ligament swelling is approved as requested. Interspinous ligament swelling is a radiologic finding characterized by increased fluid content within the interspinous ligament, typically seen as hyperintensity on fluid-sensitive MRI sequences. It often indicates inflammation, strain, or repetitive stress injury and may be associated with conditions like Baastrup's disease, degenerative disc disease, or mechanical low back pain. Interspinous ligament swelling will be added as a PT to HLT Ligament disorders.

CR Number: 2025206001 **Implementation Date:** 29-Jul-25 Related CR: 2025206001

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Mobility support*	Approved as Requested	Proposed PT

SOC primary	*Surgical and medical procedures*		HLT primary	
			Therapeutic procedures NEC	10027700
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new PT Mobility support to primary HLT Therapeutic procedures NEC in SOC Surgical and medical procedures is approved as requested. Mobility support summarizes measures to enable or enhance the mobility for individuals who have difficulty walking or cannot walk at all. Such support offers a means of independent movement, enabling people to participate in daily activities, social engagements, and access services like work and healthcare.

CR Number: 2025206002 **Implementation Date:** 29-Jul-25 Related CR: 2025206002

			Pseudo-Pelger-Huet anomaly	10092930
			HLT primary	
			White blood cell abnormal findings NEC	10047936
			SOC primary	
			Blood and lymphatic system disorders	10005329

MSSO Comment: The proposal to add a new LLT Pseudo-Pelger-Huet anomaly is approved but not as requested. Pseudo-Pelger-Huët anomaly is an acquired morphological abnormality of neutrophils, characterized by hyposegmented nuclei—often bilobed or dumbbell-shaped—with dense chromatin and a normal or slightly hypogranular cytoplasm. It is commonly associated with myelodysplastic syndromes, myeloid leukemias, certain drugs, severe infections, or exposure to toxins. Pseudo-Pelger-Huet anomaly will be added as a PT to HLT White blood cell abnormal findings NEC. In a related change, Pelger-Huet anomaly will be added to primary HLT Haematological disorders congenital NEC and to secondary HLT White blood cell abnormal findings NEC.

HLT primary	*Renal failure complications*		*Uremic fetor*	10092931	Current
SOC primary	*Renal and urinary disorders*		To PT		
			Uraemia odour	10056609	

MSSO Comment: The proposal to add a new PT Uremic fetor to primary HLT Renal failure complications in SOC Renal and urinary disorders is approved but not as requested. Uremic fetor, characterized by a urine-like or fishy odor, is typically a sign of uremia resulting from advanced kidney failure. While most commonly associated with chronic kidney disease or end-stage renal disease, it may also occur in cases of severe dehydration or excessive protein intake in individuals with impaired renal function. LLT Uremic fetor and its British English spelled counterpart LLT Uraemic foetor will both be added to PT Uraemia odour.

HLT primary	*Anaemias haemolytic immune*			
SOC primary	*Blood and lymphatic system disorders*			

MSSO Comment: The proposal to add a new PT Immune-mediated haemolytic anaemia to primary HLT Anaemias haemolytic immune in SOC Blood and lymphatic system disorders is not approved. Proposed term already exists as LLT Immune hemolytic anemia under PT Autoimmune haemolytic anaemia.

CR Number: 2025209005 **Implementation Date:** 30-Jul-25 Related CR: 2025209005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Myosteatosis*	Approved Not as Requested	Proposed PT	
HLT primary	*Muscle related signs and symptoms NEC*		*Myosteatosis*	10092934
SOC primary	*Musculoskeletal and connective tissue disorders*		HLT primary	
			Muscle weakness conditions	10062913
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395
			HLT secondary	
			Lipid metabolism and deposit disorders NEC	10024581
			SOC secondary	
			Metabolism and nutrition disorders	10027433

MSSO Comment: The proposal to add a new PT Myosteatosis to primary HLT Muscle related signs and symptoms NEC in SOC Musculoskeletal and connective tissue disorders and secondary HLT Lipid metabolism and deposit disorders NEC in SOC Metabolism and nutrition disorders is approved but not as requested. Myosteatosis refers to the excessive infiltration of fat within skeletal muscle tissue, encompassing intermuscular, intramuscular, and intramyocellular fat. This condition is distinct from sarcopenia, which primarily involves muscle mass loss. Myosteatosis will be added as a PT to primary HLT Muscle weakness conditions and to secondary HLT Lipid metabolism and deposit disorders NEC.

			Nervous system disorders	10029205
			HLT secondary	
			Specific cognitive ability disturbances	10041427
			SOC secondary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new LLT Dysorthography is approved but not as requested. Dysorthography is a specific learning disorder characterized by persistent difficulties with spelling and written expression, despite normal intelligence and adequate instruction. It is neurodevelopmental in origin and distinct from dyslexia, affecting written language skills rather than reading ability. Dysorthography will be added as a PT to primary HLT Cortical dysfunction NEC and secondary HLT Specific cognitive ability disturbances.

Proposed LLT	*Dysorthography*	Rejected		

MSSO Comment: The proposal to add a new LLT Dysorthography is not approved. This is a duplicate request of change request 2025210000. The term has been implemented as PT in change request 2025210000.

CR Number: 2025210003 **Implementation Date:** 07-Aug-25 Related CR: 2025210003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Alpha-L-fucosidase*	Approved Not as Requested After Suspension	Proposed PT	
			Alpha-L-fucosidase test	10092963
			HLT primary	
			Cell marker analyses	10072981
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Alpha-L-fucosidase is approved but not as requested after suspension. An Alpha-L-fucosidase (AFU) test measures the level of the enzyme alpha-L-fucosidase in a sample, typically blood or serum. Elevated levels of AFU in the blood can be an indicator of certain conditions, most notably hepatocellular carcinoma. The proposed term will be modified to an investigative test and added as PT Alpha-L-fucosidase test to HLT Cell marker analyses.

			Arthritis reactive	10003267	

MSSO Comment: The proposal to move the LLT Postdysenteric arthropathy involving lower leg from PT Arthritis infective to PT Arthritis reactive is approved as requested. Post dysenteric arthropathy is defined as sterile reactive oligoarthritis which may occur 1 to 3 weeks after dysentery induced Shigella flexneri infection, and usually settles within a few weeks. Non-current LLT Postdysenteric arthropathy involving lower leg will be moved for better alignment in relation to change request 2025191006.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*ATRIAL ABLATION*	Approved Not as Requested	Proposed LLT		
			Atrial ablation	10092947	Current
			To PT		
			Cardiac ablation	10059864	

MSSO Comment: The proposal to add a new LLT ATRIAL ABLATION is approved but not as requested. Atrial ablation is a medical procedure used to treat arrhythmias, primarily for atrial fibrillation, atrial flutter, and supraventricular tachycardia that are not controlled by medications. Atrial ablation involves scarring or destroying small areas of heart tissue that are causing irregular electrical signals. The proposed term will be modified for MedDRA capitalization rules and added as LLT Atrial ablation to PT Cardiac ablation.

CR Number: 2025211004 **Implementation Date:** 05-Aug-25 Related CR: 2025211004

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Hypoplastic Left ventricle*	Rejected		

MSSO Comment: The proposal to add a new LLT Hypoplastic Left ventricle is not approved. The concept described in submitters justification already exists as LLT/PT Hypoplastic left heart syndrome. In case, this concept does not address your needs, please resubmit and clarify the concept you are requesting.

CR Number: 2025211005 **Implementation Date:** 05-Aug-25 Related CR: 2025211005

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Gallbladder attack*	Rejected		

MSSO Comment: The proposal to add a new LLT Gallbladder attack is not approved. The proposed concept already exists as PT Biliary colic with its various synonym LLTs.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*ATTENUATED VESSELS*	Rejected		

MSSO Comment: The proposal to add a new LLT ATTENUATED VESSELS is not approved. An anatomically non-qualified term for attenuated vessels has limited value regarding the medical information. For specific anatomical locations, MedDRA has existing terms like e.g. LLT Retinal vessel attenuation, which is the example given in the initial justification.

CR Number: 2025211007 **Implementation Date:** 05-Aug-25 Related CR: 2025211007

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*NEUTROPHILIC POLYNUCLEOSIS*	Rejected		

MSSO Comment: The proposal to add a new LLT NEUTROPHILIC POLYNUCLEOSIS is not approved. Neutrophilic polynucleosis is not a standard or widely accepted term in international English medical nomenclature. The concept can be represented by existing MedDRA terms, e.g. LLT/PT Neutrophilia.

CR Number: 2025211008 **Implementation Date:** 05-Aug-25 Related CR: 2025211008

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*STEREOTAXY*	Rejected		

MSSO Comment: The proposal to add a new LLT STEREOTAXY is not approved. Stereotaxy, or stereotactic surgery, is a minimally invasive surgical technique that uses a three-dimensional coordinate system to precisely locate and target areas within the brain or body. It is commonly used in neurosurgery for procedures such as biopsies, deep brain stimulation, and lesioning. The requested concept is represented in MedDRA with a clear procedure name as LLT Stereotactic surgery, as well as more specific procedures and diagnostic techniques.

Proposed LLT	*SPIEGEL LOBE RESECTION*	Approved Not as Requested	Proposed LLT	
			Caudate lobectomy	10092944 Current
			To PT	
			Hepatectomy	10061997

MSSO Comment: The proposal to add a new LLT SPIEGEL LOBE RESECTION is approved but not as requested. Spiegel lobe resection refers to a surgical removal of the Spiegel lobe, which is a part of the caudate lobe of the liver. The proposed term will be modified to the more commonly used term Caudate lobectomy and added as LLT to PT Hepatectomy.

CR Number: 2025211011 **Implementation Date:** 05-Aug-25 Related CR: 2025211011

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Liposculpture*	Approved as Requested	Proposed LLT	
			Liposculpture	10092946 Current
			To PT	
			Liposuction	10048701

MSSO Comment: The proposal to add a new LLT Liposculpture is approved as requested. Liposculpture is a type of cosmetic surgery that removes and reshapes fat to enhance the body's contours. It is a more refined and precise form of liposuction, often used to sculpt specific areas of the body rather than just reduce fat volume. Liposculpture will be added as LLT to PT Liposuction.

Proposed LLT	*Tracheal displacement*	Approved as Requested	Proposed LLT		
			Tracheal displacement	10092943	Current
			To PT		
			Tracheal deviation	10044287	

MSSO Comment: The proposal to add a new LLT Tracheal displacement is approved as requested. Tracheal displacement refers to a shift of the trachea from its normal midline position, often visible or palpable in the neck. Tracheal displacement will be added as LLT to PT Tracheal deviation.

CR Number: 2025211013 **Implementation Date:** 05-Aug-25 Related CR: 2025211013

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*PULMONARY LYMPHOMATOID GRANULOMATOSIS*	Approved Not as Requested	Proposed PT	
			Pulmonary lymphomatoid granulomatosis	10092942
			HLT primary	
			Lymphoproliferative disorders NEC (excl leukaemias and lymphomas)	10025353
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Lymphoproliferative disorders NEC (excl leukaemias and lymphomas)	10025353
			SOC secondary	
			Blood and lymphatic system disorders	10005329
			HLT secondary	
			Epstein-Barr viral infections	10015107
			SOC secondary	
			Infections and infestations	10021881

MSSO Comment: The proposal to add a new LLT PULMONARY LYMPHOMATOID GRANULOMATOSIS is approved but not as requested. Pulmonary lymphomatoid granulomatosis is a rare multisystem Epstein-Barr virus-associated lymphoproliferative disorder. The proposed term will be modified for MedDRA capitalization rules and added as PT Pulmonary lymphomatoid granulomatosis to biaxial HLT Lymphoproliferative disorders NEC (excl leukaemias and lymphomas) (primary SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) and secondary SOC Blood and lymphatic system disorders), secondary HLT Epstein-Barr viral infections and secondary HLT Lower respiratory tract inflammatory and immunologic conditions. In a related change, LLT Lymphomatoid granulomatosis will be moved from PT Angiocentric lymphoma to new PT Pulmonary lymphomatoid granulomatosis.

			Reproductive system and breast disorders	10038604
			HLT secondary	
			Postpartum complications NEC	10036416
			SOC secondary	
			Pregnancy, puerperium and perinatal conditions	10036585

MSSO Comment: The proposal to add a new LLT Perineal oedema is approved but not as requested. Perineal edema is the swelling of tissues in the perineal area, often caused by fluid accumulation due to trauma, childbirth, surgery, or inflammation. It can also result from prolonged pressure, infection, allergic reactions, or certain medical conditions like preeclampsia. Perineal oedema will be added as a new PT to primary HLT Reproductive tract signs and symptoms NEC and secondary HLT Postpartum complications NEC. In a related change, the American English spelled counterpart LLT Perineal edema will be added to new PT Perineal oedema.

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Flu-like symptoms*	Rejected		
From PT	*Influenza like illness*			
To PT	*Influenza*			

MSSO Comment: The proposal to move the LLT Flu-like symptoms from PT Influenza like illness to PT Influenza is not approved. The current mapping of Flu-like symptoms is considered correct. This case is a justified exception due to is very high frequency of use. "Influenza like illness" does not represent a definitive clinical diagnosis, but rather a term created specifically to capture these "flu-like" syndromes without a defined etiology. Flu-like symptoms - such as fever, chills, fatigue, body aches, and cough — are not exclusive to influenza and may occur with other illnesses such as viral infections, common cold, etc.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*POST COVID 19 FATIGUE*	Rejected		

MSSO Comment: The proposal to add a new LLT POST COVID 19 FATIGUE is not approved. The proposed term combines a temporal/causal modifier ("post COVID-19") with a symptom ("fatigue"). The MSSO refrains from adding terms representing an underlying causal condition together with complication or symptom. Please refer to Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document which defines these as "combination terms" and provides coding guidance. Please consider existing terms such as LLT Post-COVID syndrome and LLT Fatigue or LLT Post viral fatigue, depending on your specific scenario.

CR Number: 2025212005 **Implementation Date:** 05-Aug-25 Related CR: 2025212005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Cytomegalovirus DNA test*	Approved as Requested	Proposed LLT		
			Cytomegalovirus DNA test	10092952	Current
			To PT		
			Cytomegalovirus test	10061806	

MSSO Comment: The proposal to add a new term Cytomegalovirus DNA test is approved as requested. A Cytomegalovirus DNA test, specifically a cytomegalovirus (CMV) DNA PCR test, detects the presence of CMV's genetic material (DNA) in a sample, usually plasma, using a real-time PCR technique. Cytomegalovirus DNA test will be added as LLT to PT Cytomegalovirus test.

CR Number: 2025212006 **Implementation Date:** 05-Aug-25 Related CR: 2025212006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Viral blood test*	Approved as Requested	Proposed LLT		
			Viral blood test	10092953	Current
			To PT		
			Viral test	10062358	

MSSO Comment: The proposal to add a new term Viral blood test is approved as requested. A viral blood test is used to detect the presence of specific viruses or antibodies to those viruses in a person's blood. Viral blood test will be added as LLT to PT Viral test.

CR Number: 2025212007 **Implementation Date:** 05-Aug-25 Related CR: 2025212007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Fungal blood test*	Approved as Requested	Proposed LLT *Fungal blood test*	10092954	Current
			To PT *Fungal test*	10070457	

MSSO Comment: The proposal to add a new term Fungal blood test is approved as requested. A fungal blood test, also known as a fungal culture blood test, is used to detect the presence of fungi in a blood sample, which can indicate a fungal infection. This test is valuable in diagnosing serious fungal infections, particularly in immunocompromised individuals. Fungal blood test will be added as LLT to PT Fungal test.

Change Requested	Change Status of LLT	Final Disposition	Final Placement	MedDRA Code #	
LLT to change	*Secondary malignant neoplasm of small intestine incl duodenum*	Approved as Requested	LLT to change *Secondary malignant neoplasm of small intestine incl duodenum*	10056778	Non-Current
Status	*non-current*		Status *non-current*		

MSSO Comment: The proposal to change status of LLT Secondary malignant neoplasm of small intestine incl duodenum to non-current is approved as requested. Although "secondary malignancy" has traditionally included metastases in definitions such as those from the National Cancer Institute, its contemporary use increasingly refers to a new, distinct primary cancer resulting from prior treatment. This shift in usage reflects a need for greater clinical precision, as equating metastases with treatment-related cancers can lead to diagnostic and therapeutic misunderstandings. Recognizing this evolving distinction helps ensure clearer communication in both clinical and research settings and avoids ambiguity.

CR Number: 2025213024 **Implementation Date:** 06-Aug-25 Related CR: 2025213024

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Splenic artery bleeding*	Approved Not as Requested	Proposed PT *Splenic artery haemorrhage*	10092955
			HLT primary *Haemorrhages NEC*	10018987
			SOC primary *Vascular disorders*	10047065

MSSO Comment: The proposal to add a new term Splenic artery bleeding is approved but not as requested. Splenic artery bleeding refers to hemorrhage originating from the splenic artery, a major branch of the celiac trunk that supplies the spleen. Though less frequent than splenic vein hemorrhage, it is significantly more dangerous, as it occurs under higher pressure and can lead to rapid hemodynamic deterioration. The proposed term will be modified to its most frequent medical representation in literature and added as PT Splenic artery haemorrhage to HLT Haemorrhages NEC. In a related change, the American English spelled counterpart will also be added as LLT Splenic artery hemorrhage to PT Splenic artery haemorrhage.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Wrist osteopenia*	Approved as Requested	Proposed LLT		
To PT	*Osteopenia*		*Wrist osteopenia*	10092958	Current
			To PT		
			Osteopenia	10049088	

MSSO Comment: The proposal to add a new LLT Wrist osteopenia to PT Osteopenia is approved as requested. Osteopenia, a condition characterized by lower than normal bone density, most commonly affects the spine, hip, and wrist. These are also the areas where fractures are most likely to occur due to osteopenia.

CR Number: 2025216005 **Implementation Date:** 08-Aug-25 Related CR: 2025216005

Change Requested	Reassign Primary SOC	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Metabolic stroke*	Rejected		
Old Primary SOC	*Nervous system disorders*			
New Primary SOC	*Metabolism and nutrition disorders*			

MSSO Comment: The proposal to reassign the primary SOC of PT Metabolic stroke from current SOC Nervous system disorders to SOC Metabolism and nutrition disorders is not approved. While the primary etiology for metabolic stroke is a systemic metabolic derangement, not a primary neurologic process. The MedDRA Introductory guide for SOC allocation rules states that PTs relating to diseases or signs and symptoms are assigned primarily to the site of manifestation SOC, with a few exceptions. The manifestation of a stroke is neurologic and thus the SOC Nervous system disorders is correct.

CR Number: 2025216006 **Implementation Date:** 08-Aug-25 Related CR: 2025216006

Change Requested	Reassign Primary SOC	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Metabolic stroke*	Rejected		
Old Primary SOC	*Nervous system disorders*			
New Primary SOC	*Metabolism and nutrition disorders*			

MSSO Comment: The proposal to reassign the primary SOC of PT Metabolic stroke from current SOC Nervous system disorders to SOC Metabolism and nutrition disorders is not approved. While the primary etiology for metabolic stroke is a systemic metabolic derangement, not a primary neurologic process. The MedDRA Introductory guide for SOC allocation rules states that PTs relating to diseases or signs and symptoms are assigned primarily to the site of manifestation SOC, with a few exceptions. The manifestation of a stroke is neurologic and thus the SOC Nervous system disorders is correct.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Scratching eczema*	Rejected			

MSSO Comment: The proposal to add a new LLT Scratching eczema is not approved. Proposed concept is not a recognized medical disease concept and merely a qualifier of eczema.

CR Number: 2025216054 **Implementation Date:** 07-Aug-25 Related CR: 2025216054

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Penrose drain placement*	Approved as Requested	Proposed LLT		
			Penrose drain placement	10092960	Current
			To PT		
			Drain placement	10072795	

MSSO Comment: The proposal to add a new LLT Penrose drain placement is approved as requested. A Penrose drain is a soft, flexible rubber tube used in surgery to prevent the buildup of fluid in a surgical site or wound by allowing it to drain passively. Penrose drain placement will be added as LLT to PT Drain placement.

CR Number: 2025216055 **Implementation Date:** 08-Aug-25 Related CR: 2025216055

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Midgut volvulus*	Approved After Suspension	Proposed LLT		
			Midgut volvulus	10092972	Current
			To PT		
			Volvulus of small bowel	10065666	

MSSO Comment: The proposal to add a new LLT Midgut volvulus is approved as requested after suspension. Midgut volvulus is an uncommon but critical complication arising from congenital intestinal malrotation or it may occur in adults, often as a result of prior surgery or other complications. It occurs when the small intestine twists on itself, leading to a blockage of blood flow and potential risk of tissue damage. Midgut volvulus will be added as LLT to PT Volvulus of small bowel.

CR Number: 2025216056 **Implementation Date:** 07-Aug-25 Related CR: 2025216056

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Rib Inflammation*	Rejected		

MSSO Comment: The proposal to add a new LLT Rib Inflammation is not approved. Rib inflammation is an ambiguous term, as it can refer to different medical conditions: costochondritis, rib osteitis, rib periostitis, Tietze syndrome. Please consider existing MedDRA terms, or resubmit with a clear, unambiguous concept name.

CR Number: 2025216057 **Implementation Date:** 07-Aug-25 Related CR: 2025216057

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Urethral polypectomy*	Approved as Requested	Proposed PT	
			Urethral polypectomy	10092961
			HLT primary	
			Urethral therapeutic procedures	10046460
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Urethral polypectomy is approved as requested. Urethral polypectomy is a surgical procedure to remove urethral polyps, which are benign growths in the urethra. Treatment usually involves endoscopic transurethral resection, where the polyp is removed using a small camera and instruments inserted into the urethra. Urethral polypectomy will be added as new PT to HLT Urethral therapeutic procedures.

CR Number: 2025217000 **Implementation Date:** 08-Aug-25 Related CR: 2025217000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*AA-PNH syndrome*	Approved Not as Requested	Proposed LLT		
			Paroxysmal nocturnal haemoglobinuria with aplastic anaemia	10092964	Current
			To PT		
			Paroxysmal nocturnal haemoglobinuria	10034042	

MSSO Comment: The proposal to add a new term AA-PNH syndrome is approved but not as requested. Paroxysmal nocturnal haemoglobinuria (PNH) with bone marrow failure is when the bone marrow examination in PNH patients reveals hypoplasia or myelodysplasia that meets criteria for aplastic anemia or myelodysplastic syndrome, with variable levels of hemolysis-associated findings. The proposed concept will be modified to the most commonly found in literature and added as LLT Paroxysmal nocturnal haemoglobinuria with aplastic anaemia, along with its American spelled counterpart LLT Paroxysmal nocturnal hemoglobinuria with aplastic anemia both will be added to PT Paroxysmal nocturnal haemoglobinuria.

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Injection site lipodystrophy*	Rejected		
From PT	*Injection site atrophy*			

MSSO Comment: The proposal to promote the LLT Injection site lipodystrophy from PT Injection site atrophy is not approved. If every local manifestation were promoted to PT status with a site qualifier, the PT level would become overpopulated. While "Injection site lipodystrophy" may encompass both atrophic and hypertrophic changes at the injection site, current term alignment is acceptable for a site reaction, in which specificity does not need to be so accurate as in the representation of the basic condition itself.

CR Number: 2025217012 **Implementation Date:** 08-Aug-25 Related CR: 2025217012

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Cubitus valgus congenital*	Approved Not as Requested	Proposed LLT		
			Congenital cubitus valgus	10092966	Current
			To PT		
			Congenital musculoskeletal disorder of limbs	10086689	

MSSO Comment: The proposal to add a new LLT Cubitus valgus congenital is approved but not as requested. Cubitus valgus congenital is a non-traumatic, birth-present deformity, where the elbow bends outward more than normal, sometimes as part of a genetic syndrome. The proposed term will be modified to natural language word order and added as LLT Congenital cubitus valgus to PT Congenital musculoskeletal disorder of limbs.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Hypermobile joints*	Rejected		

MSSO Comment: The proposal to add a new LLT Hypermobile joints is not approved. The concept of "joint hypermobility" is ambiguous, as it may represent both joint hyperextension and joint laxity, two distinct entities which already exist in MedDRA. This lack of precision can lead to clinical misinterpretation.

CR Number: 2025217014 **Implementation Date:** 08-Aug-25 Related CR: 2025217014

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Rhizomelic shortening of limbs*	Approved Not as Requested	Proposed LLT	
			Rhizomelia	10092967 Current
			To PT	
			Limb reduction defect	10024503

MSSO Comment: The proposal to add a new LLT Rhizomelic shortening of limbs is approved but not as requested. Rhizomelic shortening of limbs refers to the disproportionate shortening of the proximal segments of the limbs. The proposed concept will be modified to the more frequently used medical expression and added as LLT Rhizomelia to PT Limb reduction defect. This modified term is also in alignment with existing LLT Hemimelia and LLT Mesomelia, which represent underdevelopment of the distal and middle segments of the limbs.

CR Number: 2025218000 **Implementation Date:** 08-Aug-25 Related CR: 2025218000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Pleural effusion aggravated*	Rejected		

MSSO Comment: The proposal to add a new LLT Pleural effusion aggravated is not approved. The MSSO refrains from adding new terms with a qualifier of aggravation / worsening / exacerbation unless such a term represents an internationally accepted unique medical concept.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Supravalvular aortic stenosis,congenital*	Approved Not as Requested	Proposed PT	
			Supravalvular aortic stenosis	10042598
			To HLT	
			Cardiac valve disorders congenital	10007614

MSSO Comment: The proposal to add a new term Supravalvular aortic stenosis,congenital is approved but not as requested. Supravalvular aortic stenosis is a rare congenital narrowing of the aorta just above the valve, often linked to Williams–Beuren syndrome. It raises left-heart workload, can limit coronary blood flow, and in severe cases causes chest pain, breathlessness, or fainting. The proposed concept already exists in MedDRA, however supravalvular aortic stenosis is classically a congenital, and very rarely an acquired condition. Therefore, the PT Supravalvular aortic stenosis will also be linked to HLT Cardiac valve disorders congenital. In a related change, the primary SOC for PT Supravalvular aortic stenosis will be moved from SOC Cardiac disorders to SOC Congenital, familial and genetic disorders. This will now be appropriately represented as a congenital condition.

Proposed LLT	*Corneal epithelium injury*	Approved Not as Requested	Proposed PT	
			Corneal epithelium injury	10092973
			HLT primary	
			Eye injuries NEC	10027674
			SOC primary	
			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Corneal injuries	10011024
			SOC secondary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new LLT Corneal epithelium injury is approved but not as requested. A corneal epithelium injury is a superficial damage to the outermost layer of the cornea, usually from trauma, foreign bodies, or chemical/thermal causes, and typically heals quickly with low risk of scarring. Corneal epithelium injury will be added as a PT to primary HLT Eye injuries NEC and to secondary HLT Corneal injuries.

CR Number: 2025218010 **Implementation Date:** 14-Aug-25 Related CR: 2025218010

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Keratinocyte proliferation*	Rejected		

MSSO Comment: The proposal to add a new term Keratinocyte proliferation is not approved. The proposed concept is a normal process where keratinocytes multiply and increase in number. This process is essential for skin repair, including wound healing, and maintaining a healthy skin barrier.

CR Number: 2025219000 **Implementation Date:** 08-Oct-25 Related CR: 2025219000

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Anxiodepressive syndrome*	Rejected After Suspension		
From PT	*Mixed anxiety and depressive disorder*			
To PT	*Depression*			

MSSO Comment: The proposal to move the LLT Anxiodepressive syndrome from PT Mixed anxiety and depressive disorder to PT Depression is not approved after suspension. Anxiodepressive syndrome is generally used in literature to refer to mixed anxiety and depressive disorder and has a high frequency that may impact legacy data. As such, LLT Anxiodepressive syndrome will remain under PT Mixed anxiety and depressive disorder.

			Intrauterine transfusion	10092975
			HLT primary	
			Blood and blood product treatment	10019028
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Intrauterine transfusion is approved as requested. Intrauterine transfusion is a medical procedure in which blood is administered to the fetus while still in the uterus, usually through the umbilical cord or, less frequently, into the fetal abdominal cavity. It is mainly used to treat severe fetal anemia, such as that caused by Rh incompatibility or other isoimmunizations, congenital infections, or certain hematologic disorders. Intrauterine transfusion will be added as PT to HLT Blood and blood product treatment.

Change Requested	Reassign Primary SOC	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Oropharyngeal squamous cell carcinoma*	Approved Not as Requested	Proposed LLT	
Old Primary SOC	*Neoplasms benign, malignant and unspecified (incl cysts and polyps)*		*Human papilloma virus positive oropharyngeal squamous cell carcinoma*	10082410
New Primary SOC	*Infections and infestations*		From PT	
			Oropharyngeal squamous cell carcinoma	10031112
			HLT primary	
			Oropharyngeal, nasopharyngeal and tonsillar neoplasms malignant and unspecified	10028801
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Papilloma viral infections	10033724
			SOC secondary	
			Infections and infestations	10021881

MSSO Comment: The proposal to reassign the primary SOC of PT Oropharyngeal squamous cell carcinoma from current SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) to SOC Infections and infestations is approved but not as requested. Recent research has shown that Human papilloma virus (HPV)-associated oropharyngeal squamous cell carcinoma (SCC) is a distinct etiologic entity, and this subset of head and neck cancers is associated with an improved prognosis as compared to HPV-negative head and neck cancers. As such, LLT Human papilloma virus positive oropharyngeal squamous cell carcinoma will be promoted from PT Oropharyngeal squamous cell carcinoma and linked to primary HLT Oropharyngeal, nasopharyngeal and tonsillar neoplasms malignant and unspecified and secondary HLT Papilloma viral infection and secondary HLT Malignant oral cavity neoplasms and secondary HLT Upper respiratory tract neoplasms. In addition, LLT HPV positive oropharyngeal squamous cell carcinoma will be moved from PT Oropharyngeal squamous cell carcinoma to the newly promoted LLT Human papilloma virus positive oropharyngeal squamous cell carcinoma. While HPV-positive rectal SCC is biologically distinct from the typical rectal adenocarcinoma—and closer in profile to HPV-related anal SCC—it remains too uncommon to be formally designated a standalone entity on the basis of prognosis, and therefore remain an LLT HPV positive rectal squamous cell carcinoma.

SOC primary	*Congenital, familial and genetic disorders*		HLT primary	
			Chromosomal abnormalities NEC	10008805
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Neoplasms malignant site unspecified NEC	10029105
			SOC secondary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104

MSSO Comment: The proposal to add a new PT Short telomere to primary HLT Chromosomal abnormalities NEC in SOC Congenital, familial and genetic disorders and secondary HLT Chromosome analyses in SOC Investigations is approved but not as requested. Short telomere syndromes are accelerated aging syndromes often caused by inheritable gene mutations resulting in decreased telomere lengths. Conditions for which short telomere syndrome increases risk, rather than representing its primary manifestations, are mainly neoplasms. The proposed term will be modified to represent a disorder term and added as PT Short telomere syndrome to primary HLT Chromosomal abnormalities NEC and to secondary HLT Neoplasms malignant site unspecified NEC.

Detail Report

CR Number: 2025224004 **Implementation Date:** 14-Aug-25 Related CR: 2025224004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Epidural cyst*	Approved Not as Requested	Proposed LLT		
			Spinal epidural cyst	10092984	Current
			To PT		
			Spinal meningeal cyst	10067375	

MSSO Comment: The proposal to add a new term Epidural cyst is approved but not as requested. A spinal epidural cyst is a spinal cyst situated upon or outside the dura mater. Proposed term will be modified for clarity and added as sub-concept LLT Spinal epidural cyst to PT Spinal meningeal cyst.

CR Number: 2025224005 **Implementation Date:** 14-Aug-25 Related CR: 2025224005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Neovaginal bleeding*	Approved as Requested	Proposed LLT		
			Neovaginal bleeding	10092985	Current
			To PT		
			Neovaginal haemorrhage	10092982	

MSSO Comment: The proposal to add a new term Neovaginal bleeding is approved as requested. Neovaginal bleeding refers to bleeding from a neovagina, a surgically created vaginal cavity, typically in transgender women after vaginoplasty. Neovaginal bleeding will be added as an LLT to new PT Neovaginal haemorrhage. In a related change, new PT Neovaginal haemorrhage will be added to primary HLT Reproductive tract and breast procedural complications, to secondary HLT Vulvovaginal signs and symptoms and to secondary HLT Reproductive system haemorrhages. Furthermore, the American English spelled LLT Neovaginal hemorrhage will be added to new PT Neovaginal haemorrhage.

Proposed LLT	*Neovaginal Bleeding*	Rejected		

MSSO Comment: The proposal to add a new LLT Neovaginal Bleeding is not approved. The proposed term has recently been added in change request 2025224005 as LLT Neovaginal bleeding to new PT Neovaginal haemorrhage.

CR Number: 2025225004 **Implementation Date:** 19-Aug-25 Related CR: 2025225004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Product use in unapproved country*	Approved Not as Requested	Proposed PT	
			Product use in country where product is unapproved	10092988
			HLT primary	
			Medication errors, product use errors and issues NEC	10079146
			SOC primary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new PT Product use in unapproved country is approved but not as requested. There are sometimes scenarios reported in which a product is used in a country where the product has not been approved for use or where the product is not marketed. The proposed concept will be modified for clarity to prevent the possible misinterpretation of the scenario and added as new PT Product use in country where product is unapproved to HLT Medication errors, product use errors and issues NEC.

Detail Report

CR Number: 2025225045 **Implementation Date:** 19-Aug-25 Related CR: 2025225045

Change Requested	Reassign Primary SOC	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Abdominal mass*	Rejected		
Old Primary SOC	*Gastrointestinal disorders*			
New Primary SOC	*General disorders and administration site conditions*			

MSSO Comment: The proposal to reassign the primary SOC of PT Abdominal mass from current SOC Gastrointestinal disorders to SOC General disorders and administration site conditions is not approved. Administration site reactions represent only one of many possible etiologies for an abdominal mass. In the example, “injection site nodule on the abdomen”, abdominal is a qualifier that describes the region of the skin affected by a nodule appearance. This is distinct from “abdominal mass”, which refers to a pathological finding involving the abdominal wall or intra-abdominal structures. The specific event term is available as LLT Injection site nodule which links to primary SOC General disorders and administration site conditions. As stated in the MedDRA points to Consider document in section 3.7.2-Select a term for the event, rather than a term that reflects a non-specific condition at the body site.

CR Number: 2025225046 **Implementation Date:** 19-Aug-25 Related CR: 2025225046

Change Requested	Reassign Primary SOC	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Skin mass*	Rejected		
Old Primary SOC	*Skin and subcutaneous tissue disorders*			
New Primary SOC	*General disorders and administration site conditions*			

MSSO Comment: The proposal to reassign the primary SOC of PT Skin mass from current SOC Skin and subcutaneous tissue disorders to SOC General disorders and administration site conditions is not approved. Injection site reactions are only one of many possible etiologies of skin masses, which may also result from cysts, benign or malignant tumors, inflammatory dermatoses, infections, or trauma. The current primary classification under Skin and subcutaneous tissue disorders accurately reflects the anatomical site. The specific event term is available as LLT Injection site mass which links to primary SOC General disorders and administration site conditions. As stated in the MedDRA points to Consider document in section 3.7.2-Select a term for the event, rather than a term that reflects a non-specific condition at the body site.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Non ischemic cardiac chest pain*	Rejected		

MSSO Comment: The proposal to add a new term Non ischemic cardiac chest pain is not approved. Non-ischemic cardiac chest pain refers to chest pain originating from the heart that is not due to myocardial ischemia. It is not a distinct standalone diagnosis, but rather a descriptive umbrella term used clinically to group cardiac chest pain etiologies after ischemic causes are excluded e.g. pericarditis, myocarditis, valve disease, or arrhythmia-related pain. MedDRA includes terms for these more specific causes.

CR Number: 2025226005 **Implementation Date:** 19-Aug-25 Related CR: 2025226005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Delayed angioedema*	Approved Not as Requested	Proposed LLT		
			Delayed angioedema	10092990	Current
			To PT		
			Angioedema	10002424	

MSSO Comment: The proposal to add a new PT Delayed angioedema is approved but not as requested. Delayed angioedema refers to episodes of swelling that occur after a significant delay following exposure to a trigger, such as medications, infections, or allergens. Delayed angioedema will be added as LLT to PT Angioedema.

CR Number: 2025226006 **Implementation Date:** 19-Aug-25 Related CR: 2025226006

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Chronic post rheumatic arthropathy*	Approved Not as Requested	Proposed LLT	
From PT	*Rheumatoid arthritis*		*Chronic post rheumatic arthropathy*	10057222
To PT	*Polyarthritis*		From PT	
			Rheumatoid arthritis	10039073
			HLT primary	
			Arthropathies NEC	10003284
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395

MSSO Comment: The proposal to move the LLT Chronic post rheumatic arthropathy from PT Rheumatoid arthritis to PT Polyarthritis is approved but not as requested. Chronic postrheumatic arthropathy, often referred to as Jaccoud's arthropathy, is a rare, chronic condition characterized by joint deformities, particularly affecting the hands and feet, following rheumatic fever or other connective tissue diseases. It is distinct from rheumatoid arthritis due to the absence of significant joint erosions on X-rays and the potential for reversibility of deformities. LLT Chronic post rheumatic arthropathy will be promoted from PT Rheumatoid arthritis to a PT level and linked to HLT Arthropathies NEC. In a related change, LLT Jaccoud's arthropathy and LLT Chronic post rheumatic fever arthropathy will both be moved from PT Polyarthritis to the newly promoted PT Chronic post rheumatic arthropathy. Furthermore, non-current LLT Chronic postrheumatic arthropathy will be moved from PT Rheumatoid arthritis to the newly promoted PT Chronic post rheumatic arthropathy.

Change Requested	Rename HLT	Final Disposition	Final Placement	MedDRA Code #
Term to modify	*Poliomyelitis viral infections*	Approved Not as Requested After Suspension	Proposed HLT	
Replacement term	*Poliovirus infections*		*Poliovirus infections*	10093283
			To HLGT	
			Viral infectious disorders	10047438

MSSO Comment: The proposal to rename the HLT Poliomyelitis viral infections to Poliovirus infections is approved but not as requested after suspension. New HLT Poliovirus infections will be added to HLGT Viral infectious disorders. Polio viruses are a group of viruses that cause poliomyelitis, a highly infectious disease that can affect the nervous system and lead to paralysis. Polioviruses are single-stranded RNA viruses that belong to the Enterovirus subgroup of the family Picornaviridae. Humans are the only reservoir for poliovirus. The new HLT name conforms to the MedDRA term naming conventions and reflects the taxonomic classification as well as standard medical usage. In a related change, existing HLT Poliomyelitis viral infections will be merged under new HLT Poliovirus infections.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pleuritic chest pain*	Rejected		

MSSO Comment: The proposal to add a new term Pleuritic chest pain is not approved. Pleuritic chest pain is the usual presentation of pleuritic pain and the concept already exists in LLT/PT Pleuritic pain.

CR Number: 2025230000 **Implementation Date:** 22-Aug-25 Related CR: 2025230000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*MSI-H/dMMR solid tumors*	Approved Not as Requested	Proposed PT	
			MSI-H/dMMR cancer	10092995
			HLT primary	
			Neoplasms malignant site unspecified NEC	10029105
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104

MSSO Comment: The proposal to add a new term MSI-H/dMMR solid tumors is approved but not as requested. A subset of cancers express deficient mismatch repair (dMMR) and its characteristic genetic signature, high levels of microsatellite instability (MSI-H) across the genome. MSI-H or dMMR tumors are generally considered together for treatment purposes because both indicate a high likelihood of responding to immunotherapy. The proposed term will be modified and added as PT MSI-H/dMMR cancer to HLT Neoplasms malignant site unspecified NEC. In a related change, the spelled-out term Microsatellite instability-high and deficient mismatch repair cancer will be added as LLT to new PT MSI-H/dMMR cancer. Furthermore, PT Microsatellite instability cancer will be merged with new PT MSI-H/dMMR cancer to avoid overrepresentation at the PT level.

Detail Report

			MSI-H/dMMR cancer	10092995	

MSSO Comment:

CR Number: 2025230001 **Implementation Date:** 22-Aug-25 Related CR: 2025230001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Mismatch repair deficient cancer*	Approved as Requested	Proposed LLT		
			Mismatch repair deficient cancer	10092996	Current
			To PT		
			MSI-H/dMMR cancer	10092995	

MSSO Comment: The proposal to add a new term Mismatch repair deficient cancer is approved as requested. A subset of cancers express deficient mismatch repair (dMMR) and its characteristic genetic signature, high levels of microsatellite instability (MSI-H) across the genome. The inability to repair DNA damage results in the accumulation of mutations. Tumors that lack the mismatch repair (MMR) mechanism harbor many more mutations than do tumors of the same type without such MMR defects. Mismatch repair deficient cancer will be added as LLT to PT MSI-H/dMMR cancer added in change request 2025230000.

Detail Report

CR Number: 2025230002 **Implementation Date:** 21-Aug-25 Related CR: 2025230002

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Ranson's criteria*	Approved Not as Requested	Proposed PT	
HLT primary	*Investigations NEC*		*Ranson's score*	10092993
SOC primary	*Investigations*		HLT primary	
			Investigations NEC	10022892
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT Ranson's criteria to primary HLT Investigations NEC in SOC Investigations is approved but not as requested. Ranson's criteria are a set of clinical and laboratory parameters used to assess the severity and prognosis of acute pancreatitis. Ranson's criteria are recognized worldwide, but due to the fact that they require 48 hours to complete, they are being replaced by faster and more reliable scoring systems in clinical practice. The proposed term will be modified and added as PT Ranson's score to HLT Investigations NEC, indicating the result of applying the Ranson's criteria.

CR Number: 2025230003 **Implementation Date:** 21-Aug-25 Related CR: 2025230003

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Glasgow-Imrie criteria*	Approved Not as Requested	Proposed PT	
			Glasgow-Imrie score	10092994
			HLT primary	
			Investigations NEC	10022892
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT Glasgow-Imrie criteria is approved but not as requested. Glasgow–Imrie criteria are a set of 8 criteria used to assess severity of acute pancreatitis within the first 48 hours of admission. In modern international practice, they are less commonly used than BISAP or APACHE II scoring criteria. The proposed term will be modified and added as PT Glasgow-Imrie score to HLT Investigations NEC, indicating the result of applying the Glasgow-Imrie criteria.

CR Number: 2025230005 **Implementation Date:** 21-Aug-25 Related CR: 2025230005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Subclinical symptoms*	Rejected		
HLT primary	*General signs and symptoms NEC*			
SOC primary	*General disorders and administration site conditions*			

MSSO Comment: The proposal to add a new PT Subclinical symptoms to primary HLT General signs and symptoms NEC in SOC General disorders and administration site conditions is not approved. Descriptors of severity are not included in the terminology because the combination of terms with all possible qualifiers would lead to an overpopulation of MedDRA. Severity descriptors are usually captured in other database fields. Please consider unspecific general terms for your coding needs and consider recording the approach in your company specific coding guidance.

Proposed Term	*Dyskeratosis*	Approved as Requested	Proposed PT	
			Dyskeratosis	10092998
			HLT primary	
			Dermal and epidermal conditions NEC	10012424
			SOC primary	
			Skin and subcutaneous tissue disorders	10040785

MSSO Comment: The proposal to add a new term Dyskeratosis is approved as requested. Dyskeratosis refers to an abnormal, premature, or imperfect keratinization of the keratinocytes. It is a histologic feature of e.g. actinic keratosis, squamous cell carcinoma, Darier disease and Grover disease. Dyskeratosis will be added as PT to HLT Dermal and epidermal conditions NEC.

CR Number: 2025231001 **Implementation Date:** 22-Aug-25 Related CR: 2025231001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Candida breast*	Approved Not as Requested	Proposed PT	
			Breast candidiasis	10092999
			HLT primary	
			Candida infections	10007134
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Breast infections and inflammations	10021883
			SOC secondary	
			Reproductive system and breast disorders	10038604

MSSO Comment: The proposal to add a new term Candida breast is approved but not as requested. Candida breast refers broadly to any infection of the breast tissue caused by Candida species, most commonly Candida albicans. It includes superficial skin infections (like yeast rash under the breast) and deeper ductal infections (Candida mastitis). The proposed term will be modified for clarity and added as PT Breast candidiasis to primary HLT Candida infections and secondary HLT Breast infections and inflammations.

Detail Report

CR Number: 2025231002 **Implementation Date:** 22-Aug-25 Related CR: 2025231002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Breast yeast infection*	Rejected		

MSSO Comment: The proposal to add a new term Breast yeast infection is not approved. The concept is represented in MedDRA by LLT/PT Mastitis fungal.

CR Number: 2025231003 **Implementation Date:** 22-Aug-25 Related CR: 2025231003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Candida mastitis*	Approved as Requested	Proposed LLT		
			Candida mastitis	10093000	Current
			To PT		
			Breast candidiasis	10092999	

MSSO Comment: The proposal to add a new term Candida mastitis is approved as requested. Candida mastitis is a specific subset of breast candidiasis, usually referring to Candida infection of the ducts or deeper breast tissue, not just the skin surface. Candida mastitis will be added as LLT to PT Breast candidiasis added in change request 2025231001.

CR Number: 2025231004 **Implementation Date:** 22-Aug-25 Related CR: 2025231004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Intraepithelial carcinoma*	Approved as Requested	Proposed LLT		
			Intraepithelial carcinoma	10093001	Current
			To PT		
			Carcinoma in situ	10061450	

MSSO Comment: The proposal to add a new term Intraepithelial carcinoma is approved as requested. Intraepithelial carcinoma refers to a carcinoma that is confined within the epithelium of an organ. It is also referred to as carcinoma in situ or high-grade intraepithelial neoplasia (e.g., CIN 3). Intraepithelial carcinoma will be added as LLT to PT Carcinoma in situ.

CR Number: 2025231005 **Implementation Date:** 22-Aug-25 Related CR: 2025231005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Hilar enlargement*	Rejected		

MSSO Comment: The proposal to add a new term Hilar enlargement is not approved. Hilar enlargement is a broad, unspecific term. Although it is mainly used for the hilar region of the lung, hilum is a general anatomical term. It refers to the area of an organ where structures like blood vessels, nerves, and ducts enter or exit. The term is therefore ambiguous. Please consider existing LLT/PT Pulmonary hilar enlargement for your coding needs, based on the provided justification.

CR Number: 2025231006 **Implementation Date:** 22-Aug-25 Related CR: 2025231006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Tremor distal*	Rejected		

MSSO Comment: The proposal to add a new term Tremor distal is not approved. The proposed term can be represented by existing terms: LT Tremor of hands, LLT Tremor finger, LLT Tremor limb. Although, MedDRA terms are added in singular form, they can refer to both sides, as well as upper/lower extremities.

Detail Report

CR Number: 2025231007 **Implementation Date:** 22-Aug-25 Related CR: 2025231007

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Splenic sclerosing angiomatoid nodular transformation*	Approved as Requested	Proposed PT	
			Splenic sclerosing angiomatoid nodular transformation	10093002
HLT primary	*Spleen disorders*		HLT primary	
			Spleen disorders	10041635
SOC primary	*Blood and lymphatic system disorders*		SOC primary	
			Blood and lymphatic system disorders	10005329
			HLT secondary	
			Vascular malformations and acquired anomalies	10047091
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new PT Splenic sclerosing angiomatoid nodular transformation to primary HLT Spleen disorders in SOC Blood and lymphatic system disorders is approved as requested. Splenic sclerosing angiomatoid nodular transformation is described as a benign vascular proliferation of uncertain (probably reactive) nature. Splenic sclerosing angiomatoid nodular transformation will also be added to secondary HLT Vascular malformations and acquired anomalies.

CR Number: 2025231008 **Implementation Date:** 22-Aug-25 Related CR: 2025231008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Post stroke sequelae*	Rejected		

MSSO Comment: The proposal to add a new term Post stroke sequelae is not approved. Post stroke sequela is an unspecific grouping term for a variety of physical and neurological complications after a stroke. MedDRA does not include general terms for sequelae, but specific types of sequelae can be coded by existing MedDRA terms.

Detail Report

CR Number: 2025232000 **Implementation Date:** 27-Aug-25 Related CR: 2025232000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Post surgery paresthesia*	Rejected		

MSSO Comment: The proposal to add a new LLT Post surgery paresthesia is not approved. Post-surgery paraesthesia is an unspecific combination term, as it combines paresthesia with a time component rather than an etiology. It can be due to a number of different factors, like direct nerve damage, positioning and anesthesia-related factors, vascular or ischemic causes, inflammation etc. Please consider a more specific concept like LLT/PT Incision site paraesthesia or other existing paresthesia terms depending on your specific scenario.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Hot fomentation*	Rejected		
To PT	*Heat therapy*			

MSSO Comment: The proposal to add a new LLT Hot fomentation to PT Heat therapy is not approved. This is an uncommon expression to describe warm/hot compress therapy, which already exists as LLT Hot compress therapy to PT Heat therapy.

CR Number: 2025232002 **Implementation Date:** 27-Aug-25 Related CR: 2025232002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Warm eye compress*	Rejected		

MSSO Comment: The proposal to add a new LLT Warm eye compress is not approved. MedDRA cannot accommodate an anatomically qualified term for every supportive treatment. The concept exists as a general term in LLT Hot compress therapy.

Detail Report

CR Number: 2025232003 **Implementation Date:** 22-Aug-25 Related CR: 2025232003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Mastectomy unilateral*	Rejected		

MSSO Comment: The proposal to add a new LLT Mastectomy unilateral is not approved. The most common form of mastectomy performed is unilateral and only when performed bilaterally, it is specified that the procedure was performed bilaterally. Generally, the most common form of a concept is unqualified.

CR Number: 2025232005 **Implementation Date:** 22-Aug-25 Related CR: 2025232005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Congenital hypotonia*	Approved Not as Requested	Proposed LLT	
			Congenital hypotonia	10093004 Current
			To PT	
			Congenital floppy infant	10053153

MSSO Comment: The proposal to add a new PT Congenital hypotonia is approved but not as requested. Congenital hypotonia, also known as floppy baby syndrome, refers to decreased muscle tone present at birth. It can be a symptom of various underlying conditions or, in some cases, a condition on its own. While not always a serious condition, it can lead to developmental delays and other complications if not addressed. Congenital hypotonia will be added as synonym LLT to PT Congenital floppy infant. In a related change, PT Floppy infant and PT Hypotonia neonatal will both be demoted under PT Congenital floppy infant.

CR Number: 2025232008 **Implementation Date:** 22-Aug-25 Related CR: 2025232008

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Treatment resistent epilepsy*	Rejected		
To PT	*Epilepsy*			

MSSO Comment: The proposal to add a new LLT Treatment resistent epilepsy to PT Epilepsy is not approved. The proposed concept may be represented by existing LLT Refractory epilepsy.

CR Number: 2025232009 **Implementation Date:** 12-Sep-25 Related CR: 2025232009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Early infantile encephalopathy*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Early infantile encephalopathy is not approved after suspension. Infantile encephalopathy refers to a range of brain conditions affecting infants, often characterized by seizures, developmental delays, and neurological abnormalities and as such is a grouping term.

Detail Report

CR Number: 2025232010 **Implementation Date:** 22-Aug-25 Related CR: 2025232010

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Seizure-triggered migraine*	Approved Not as Requested	Proposed PT	
HLT primary	*Migraine headaches*		*Postictal migraine*	10093003
SOC primary	*Nervous system disorders*		HLT primary	
			Migraine headaches	10027603
			SOC primary	
			Nervous system disorders	10029205
			HLT secondary	
			Cerebrovascular and spinal vascular disorders NEC	10008193
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new PT Seizure-triggered migraine to primary HLT Migraine headaches in SOC Nervous system disorders is approved but not as requested. Postictal migraine refers to a migraine headache that occurs after a seizure. Seizures provoke a syndrome similar to the headache phase of migraine in 50% of epileptics. The proposed term will be modified into the most referenced form and added as new PT Postictal migraine to primary HLT Migraine headaches and to secondary HLT Cerebrovascular and spinal vascular disorders NEC.

CR Number: 2025232011 **Implementation Date:** 22-Aug-25 Related CR: 2025232011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Postictal epileptic headache*	Rejected		

MSSO Comment: The proposal to add a new PT Postictal epileptic headache is not approved. Headache may be associated with seizures as a preictal, ictal, or postictal phenomenon, but it is often neglected because of the dramatic neurological manifestations of the seizure. The proposed concept may be represented by existing LLT/PT Postictal headache.

			Superior cluneal nerve entrapment syndrome	10093007
			HLT primary	
			Mononeuropathies	10027917
			SOC primary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new term Superior cluneal nerve entrapment syndrome is approved as requested. Superior cluneal nerve entrapment syndrome is a condition where the sensory superior cluneal nerves become compressed or irritated as they pass through tunnels near the iliac crest. This entrapment results in chronic pain in the lower back and buttocks, potentially causing burning pain, tingling, numbness, or weakness. Superior cluneal nerve entrapment syndrome will be added as PT to HLT Mononeuropathies.

CR Number: 2025234000 **Implementation Date:** 27-Aug-25 Related CR: 2025234000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Anorectal wound*	Approved as Requested	Proposed PT	
			Anorectal wound	10093012
			HLT primary	
			Abdominal and gastrointestinal injuries NEC	10083613

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Absent thyroid isthmus*	Approved Not as Requested	Proposed LLT		
			Thyroid isthmus agenesis	10093014	Current
			To PT		
			Thyroid malformation	10062125	

MSSO Comment: The proposal to add a new term Absent thyroid isthmus is approved but not as requested. Agenesis of the thyroid isthmus is usually a benign anatomical variant, in which a thin band of thyroid tissue connecting the two lobes does not develop. This variant has important surgical (landmark-related), diagnostic (imaging pitfalls), and embryological (associated anomalies) implications. The proposed term will be modified for clarity and added as LLT Thyroid isthmus agenesis to PT Thyroid malformation.

CR Number: 2025237000 **Implementation Date:** 27-Aug-25 Related CR: 2025237000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Aspartate beta-hydroxylase increased*	Approved as Requested	Proposed PT	
			Aspartate beta-hydroxylase increased	10093015
			HLT primary	
			Cell marker analyses	10072981
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term Aspartate beta-hydroxylase increased is approved as requested. The observation that increased levels of Aspartate beta-hydroxylase (ASPH) on the surface of cancer cells correlate with enhanced tumor invasiveness coupled with the observations that ASPH is upregulated in many tumors and is hypoxically regulated make ASPH an interesting potential cancer target. Aspartate beta-hydroxylase increased will be added as new PT to HLT Cell marker analyses. In a related change, the counterpart acronym LLT ASPH increased will also be added to new PT Aspartate beta-hydroxylase increased.

Detail Report

Proposed LLT	*Gastrointestinal stromal tumor malignant*	Approved as Requested	Proposed LLT		
			Gastrointestinal stromal tumor malignant	10093011	Current
			To PT		
			Gastrointestinal stromal tumour malignant	10093009	

MSSO Comment: The proposal to add a new LLT Gastrointestinal stromal tumor malignant is approved as requested. Gastrointestinal stromal tumour is a mesenchymal neoplasm with variable behaviour, characterized by differentiation towards the interstitial cells of Cajal or precursors to these cells. The tumors can be malignant or noncancerous benign. Gastrointestinal stromal tumor malignant will be added as an LLT to the new British English spelled counterpart PT Gastrointestinal stromal tumour malignant. In a related change, PT Gastrointestinal stromal tumour malignant will be added to primary HLT Gastrointestinal neoplasms malignant NEC and secondary HLT Gastrointestinal neoplasms NEC. Furthermore, LLT Gastrointestinal stromal cancer will be moved from PT Gastrointestinal stromal tumour to new PT Gastrointestinal stromal tumour malignant for better alignment. In addition, PT Gastrointestinal stromal tumour will change its primary HLT from HLT Gastrointestinal neoplasms malignant NEC to HLT Gastrointestinal neoplasms malignancy unspecified NEC.

			To PT		
			Multiple self-healing squamous epithelioma	10093017	

MSSO Comment: The proposal to add a new term Ferguson smith disease is approved but not as requested. Multiple self-healing squamous epithelioma, also known as Ferguson-Smith disease, is a rare inherited skin cancer syndrome characterized by the development of multiple locally invasive skin tumors resembling keratoacanthomas of the face and limbs which usually heal spontaneously after several months leaving pitted scars. The proposed term will be modified and will be added as LLT Ferguson-Smith disease to new PT Multiple self-healing squamous epithelioma. In a related change, PT Multiple self-healing squamous epithelioma will be added to primary HLT Skin and subcutaneous tissue disorders congenital NEC and to secondary HLT Skin neoplasms malignant and unspecified (excl melanoma).

Proposed Term	*Pleural carcinosis*	Approved Not as Requested	Proposed LLT	
			Pleural carcinomatosis	10093019 Current
			To PT	
			Metastases to pleura	10027463

MSSO Comment: The proposal to add a new term Pleural carcinosis is approved but not as requested. Pleural carcinosis is the metastatic spread of a malignant tumor to the pleura, most often originating from carcinomas of the lung, breast, ovary, stomach, or pancreas. It typically presents with malignant pleural effusion, pleural thickening, and respiratory symptoms, and indicates advanced disease with poor prognosis. The proposed term will be modified to represent the more frequently used term and added as LLT Pleural carcinomatosis to PT Metastases to pleura.

Proposed LLT	*Ego dissolution*	Approved Not as Requested	Proposed LLT		
To PT	*Depersonalisation/derealisation disorder*		*Ego dissolution*	10093020	Current
			To PT		
			Dissociation	10013457	

MSSO Comment: The proposal to add a new LLT Ego dissolution to PT Depersonalisation/derealisation disorder is approved but not as requested. Ego dissolution is a temporary state of mind, where the individual loses their sense of self. It is commonly experienced with psychedelic substances or in the context of mystical states. It describes a temporary state of mind, not a chronic disorder. Therefore, Ego dissolution will be added as an LLT to PT Dissociation.

CR Number: 2025240003 **Implementation Date:** 02-Sep-25 Related CR: 2025240003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Large optic nerve disc*	Rejected		
To PT	*Congenital optic nerve anomaly*			

MSSO Comment: The proposal to add a new LLT Large optic nerve disc to PT Congenital optic nerve anomaly is not approved. In the congenital context described in the justification, the proposed term is a synonym for existing term LLT Megalopapilla. Megalopapilla is defined as a non-progressive human eye condition in which the optic nerve head (optic disc) has an enlarged diameter, exceeding 2.1 mm with no other morphological abnormalities.

Proposed Term	*Radiation burn of oral cavity*	Approved After Suspension	Proposed LLT		
			Radiation burn of oral cavity	10093061	Current
			To PT		
			Stomatitis radiation	10042137	

MSSO Comment: The proposal to add a new term Radiation burn of oral cavity is approved as requested after suspension. Radiation burn of oral cavity refers to painful sores, inflammation, and tissue damage inside the mouth caused by radiation therapy, particularly to the head and neck. This condition arises as radiation damages and kills oral cells faster than they can regenerate, leading to the breakdown of the mouth's protective lining. Radiation burn of oral cavity will be added as an LLT to PT Stomatitis radiation.

Proposed Term	*Radiation burns of eye*	Approved After Suspension	Proposed LLT		
			Radiation burns of eye	10093063	Current
			To PT		
			Radiation eye injury	10093058	

MSSO Comment: The proposal to add a new term Radiation burns of eye is approved as requested after suspension. Radiation burns of eye are caused by exposure to ultraviolet radiation from sources like the sun or welding arcs, and can be caused by lasers or medical radiation. Symptoms include pain, photophobia, tearing, and blurred vision. Radiation burns of eye will be added as an LLT to PT Radiation eye injury. In a related change, new PT Radiation eye injury will be added to primary HLT Radiation injuries to secondary HLT Ocular injuries NEC. Furthermore, PT Radiation corneal injury will be demoted under new PT Radiation eye injury to align anatomically similar PTs.

Detail Report

CR Number: 2025241000 **Implementation Date:** 05-Sep-25 Related CR: 2025241000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*AAV-induced liver toxicity*	Rejected		
To PT	*Hepatotoxicity*			

MSSO Comment: The proposal to add a new LLT AAV-induced liver toxicity to PT Hepatotoxicity is not approved. Adeno-associated virus vectors are successfully used in gene therapies. However, the introduction of a foreign compound into hepatocytes leads to hepatic reactions. Several mechanisms appear to be involved in liver injury, including an immune response, but also direct toxicity depending on the method of gene transfer. The proposed term implies a causal relationship between two concepts and therefore represents a combination term. The MSSO generally refrains from adding such terms as to avoid overpopulation of MedDRA. Additionally, MedDRA includes several concepts, which link to specific PTs, e.g. LLT Adenoviral hepatitis, LLT Immune-mediated hepatic disorder or LLT Immune-mediated hepatitis as well as LLT Drug-induced liver injury. Please consider the existing terms for your specific scenario.

CR Number: 2025241001 **Implementation Date:** 05-Sep-25 Related CR: 2025241001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Nanoparticle-induced nephrotoxicity*	Rejected		
To PT	*Nephropathy toxic*			

MSSO Comment: The proposal to add a new LLT Nanoparticle-induced nephrotoxicity to PT Nephropathy toxic is not approved. The proposed term implies a causal relationship between two concepts and therefore represents a combination term. The MSSO generally refrains from adding such terms as to avoid overpopulation of MedDRA. Additionally, this concept is described for in-vitro and in-vivo toxicology findings but is not yet established as a recognized clinical entity. You may consider the existing, less specific, LLT/PT Nanoparticle toxicity for your coding needs.

CR Number: 2025241002 **Implementation Date:** 05-Sep-25 Related CR: 2025241002

Proposed LLT	*Pachydrusen*	Approved as Requested	Proposed LLT		
To PT	*Retinal drusen*		*Pachydrusen*	10093022	Current
			To PT		
			Retinal drusen	10062776	

MSSO Comment: The proposal to add a new LLT Pachydrusen to PT Retinal drusen is approved as requested. Pachydrusen are large, irregular drusen located beneath the retinal pigment epithelium, often scattered across the posterior pole rather than clustered in the macula. They are associated with pachychoroid spectrum diseases, which feature a thickened choroid and dilated choroidal vessels, rather than classic age-related macular degeneration. Unlike soft drusen, pachydrusen have jagged margins and a wider distribution, making them an important diagnostic clue for underlying pachychoroid pathology.

Proposed LLT	*Sleeping Baby Syndrome*	Rejected		

MSSO Comment: The proposal to add a new LLT Sleeping Baby Syndrome is not approved. The term "Sleeping Baby Syndrome" is not recognized in the medical literature. It is an ambiguous term. The term "Sleeping Baby Syndrome" is not recognized in the medical literature. At most, it can be a layman's term for "sudden infant death syndrome", but its use is imprecise and potentially misleading. Excessive sleepiness in an infant should be documented as a clinical sign (e.g., lethargy or hypersomnia) rather than designated as a distinct syndrome.

Proposed LLT	*Post myocardial infarction syndrome*	Approved Not as Requested	Proposed PT		
From PT	*Dressler's syndrome*		*Dressler's syndrome*	10013637	Current
			With LLT		
			Post-cardiac injury syndrome	10057768	

MSSO Comment: The proposal to promote the LLT Post myocardial infarction syndrome from PT Dressler's syndrome is approved but not as requested. The term post-cardiac injury syndrome encompasses a group of pericardial inflammatory syndromes that occur after injury to the myocardium, pericardium, or both. This syndrome includes Dressler's syndrome (after myocardial infarction), post-pericardiotomy syndrome (after cardiac surgery), and other forms of pericarditis secondary to cardiac trauma or invasive procedures. PT Dressler's syndrome will be swapped with LLT Post-cardiac injury syndrome for better alignment which warrants the broader concept at the PT level. In a related change, new PT Post-cardiac injury syndrome will be linked to HLT Cardiac and vascular procedural complications. Furthermore, PT Postpericardiotomy syndrome will be demoted under PT Post-cardiac injury syndrome.

CR Number: 2025244004 **Implementation Date:** 05-Sep-25 Related CR: 2025244004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Carotid artery pseudoaneurysm*	Approved as Requested	Proposed PT	
HLT primary	*Central nervous system vascular disorders NEC*		*Carotid artery pseudoaneurysm*	10093026
SOC primary	*Nervous system disorders*		HLT primary	
			Central nervous system vascular disorders NEC	10007962
			SOC primary	
			Nervous system disorders	10029205
			HLT secondary	
			Cerebrovascular aneurysms and dissections	10008194
			SOC secondary	
			Vascular disorders	10047065
			HLT secondary	
			Neurological and psychiatric procedural complications	10029294
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new PT Carotid artery pseudoaneurysm to primary HLT Central nervous system vascular disorders NEC in SOC Nervous system disorders is approved as requested. A carotid artery pseudoaneurysm is a contained rupture of the carotid arterial wall in which blood collects between vessel layers or in the surrounding tissue, forming a sac that communicates with the arterial lumen. Unlike a true aneurysm, it does not involve all three layers of the arterial wall. Additionally, PT Carotid artery pseudoaneurysm will be linked to secondary HLT Cerebrovascular aneurysms and dissections and to secondary HLT Neurological and psychiatric procedural complications.

CR Number: 2025245000 **Implementation Date:** 05-Sep-25 Related CR: 2025245000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Aortic root dilation*	Approved Not as Requested	Proposed LLT		
			Aortic root dilatation	10093027	Current
			To PT		
			Aortic dilatation	10057453	

MSSO Comment: The proposal to add a new term Aortic root dilation is approved but not as requested. Aortic root dilatation refers to abnormal enlargement of the aortic root which may be focally aneurysmal or a more diffuse ectasia. Aortic root dilatation has long been recognized to cause functional aortic regurgitation with anatomically normal aortic valve cusps that are stretched by the dilated root and, therefore, fail to close. The proposed concept will be modified for MedDRA term naming conventions and added as LLT Aortic root dilatation to PT Aortic dilatation.

Detail Report

CR Number: 2025245001 **Implementation Date:** 13-Oct-25 Related CR: 2025245001

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Drug ineffective for non-conform use*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Drug ineffective for non-conform use is not approved after suspension. The proposed term is ambiguous and is not globally understood/interpreted uniformly. Please resubmit with the intended concept meaning as "unapproved" use or a "misuse" scenario.

CR Number: 2025245002 **Implementation Date:** 13-Oct-25 Related CR: 2025245002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Drug ineffective for non-conform use*	Rejected After Suspension		
To PT	*Drug ineffective for non-conform use*			

MSSO Comment: The proposal to add a new LLT Drug ineffective for non-conform use to PT Drug ineffective for non-conform use is not approved after suspension. This is a technical rejection since the corresponding PT was rejected in change request 2025245001.

CR Number: 2025245003 **Implementation Date:** 05-Sep-25 Related CR: 2025245003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Prescription drug obtained without a prescription*	Rejected		

MSSO Comment: The proposal to add a new term Prescription drug obtained without a prescription is not approved. Obtaining a prescription drug without prescription is a description of the circumstances of how the drug was acquired including considerations as the supply chain and legality of the way the drug was obtained. MedDRA includes several concepts such as LLT Illicit prescription attainment, LLT Prescription form tampering describing a specific from of illicit prescription attainment, as well as LLT Drug diversion, focusing more on the seller/provider part which you may consider depending upon your reported scenario.

Proposed Term	*Gastric calculus*	Approved as Requested	Proposed LLT		
			Gastric calculus	10093029	Current
			To PT		
			Gastrolithiasis	10062890	

MSSO Comment: The proposal to add a new term Gastric calculus is approved as requested. Gastric calculus is a mineralized stone or true lithiasis. Gastric calculus will be added as synonym LLT to PT Gastrolithiasis.

CR Number: 2025245008 **Implementation Date:** 05-Sep-25 Related CR: 2025245008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Trigger point pressure*	Approved Not as Requested	Proposed LLT		
			Trigger point therapy	10093030	Current
			To PT		
			Massage	10026871	

MSSO Comment: The proposal to add a new term Trigger point pressure is approved but not as requested. Trigger point therapy is a type of massage therapy that focuses on releasing tight, tender areas of muscle tissue called trigger points. These trigger points can cause pain, stiffness, and reduced range of motion. Proposed term will be modified into the form most commonly referenced and added as LLT Trigger point therapy to PT Massage.

CR Number: 2025246000 **Implementation Date:** 13-Oct-25 Related CR: 2025246000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Accelerated phase myeloproliferative neoplasms*	Approved Not as Requested After Suspension	Proposed LLT		
			Accelerated phase myeloproliferative neoplasm	10093127	Current
			To PT		
			Myeloproliferative neoplasm	10077465	

MSSO Comment: The proposal to add a new term Accelerated phase myeloproliferative neoplasms is approved but not as requested after suspension. The accelerated phase is seen from the perspective of the original disease, meaning that the chronic myeloproliferative neoplasm is no longer stable but has acquired more aggressive features. It is a defined stage distinct from both the chronic phase and the blast (leukemic) phase. The proposed term will be modified and added in its singular form as LLT Accelerated phase myeloproliferative neoplasm to PT Myeloproliferative neoplasm.

Detail Report

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Product storage error exposure to light*	Approved Not as Requested	Proposed LLT		
To PT	*Product storage error*		*Light exposure storage error*	10093031	Current
			To PT		
			Product storage error	10079843	

MSSO Comment: The proposal to add a new LLT Product storage error exposure to light to PT Product storage error is approved but not as requested. Some products have a specific storage requirement. A deviation in storage conditions where a product is exposed to light beyond specified limits may result in degradation, reduced potency, or altered safety profile. The proposed term will be modified for clearer expression and added as LLT Light exposure storage error to PT Product storage error.

CR Number: 2025246003 **Implementation Date:** 05-Sep-25 Related CR: 2025246003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Paratenonitis*	Approved as Requested	Proposed LLT		
			Paratenonitis	10093032	Current
			To PT		
			Tenosynovitis	10043261	

MSSO Comment: The proposal to add a new term Paratenonitis is approved as requested. Paratenonitis is inflammation of the paratenon, the thin, loose connective tissue sheath that surrounds a tendon, such as the Achilles tendon. This inflammation is often caused by overuse or repetitive strain, leading to pain, tenderness, and swelling around the affected tendon. Paratenonitis will be added as LLT to PT Tenosynovitis.

CR Number: 2025247000 **Implementation Date:** 12-Sep-25 Related CR: 2025247000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Pruritic rash on abdomen*	Rejected		

MSSO Comment: The proposal to add a new LLT Pruritic rash on abdomen is not approved. The proposed term is too granular. A rash with pruritus is a frequent, non-specific clinical condition and adding anatomical qualifiers for every possible site would overpopulate MedDRA.

Detail Report

CR Number: 2025248000 **Implementation Date:** 12-Sep-25 Related CR: 2025248000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Disciform scar*	Approved Not as Requested	Proposed LLT	
			Macular disciform scar	10093033 Current
			To PT	
			Macular scar	10063185

MSSO Comment: The proposal to add a new term Disciform scar is approved but not as requested. The term “disciform scar” is used primarily in ophthalmology to describe the end-stage scarring process of neovascular age-related macular degeneration. However, disciform scar is a general, descriptive term for disc-shaped scars/lesions and might be ambiguous. The proposed term will be modified for specificity and added as LLT Macular disciform scar to PT Macular scar.

CR Number: 2025251000 **Implementation Date:** 12-Sep-25 Related CR: 2025251000

Change Requested	Demote a PT	Final Disposition	Final Placement	MedDRA Code #
PT to merge	*Ecchymosis*	Rejected		
To PT	*Haemorrhage subcutaneous*			

MSSO Comment: The proposal to demote the PT Ecchymosis under PT Haemorrhage subcutaneous is not approved. The generic concept Ecchymosis remains at PT level because it represents the overarching clinical concept, whereas the regional or anatomical variants (e.g., conjunctival, eyelid, catheter site) are represented at LLT level to capture location-specific detail without overpopulating the PT level and complicating MedDRA hierarchy.

CR Number: 2025251001 **Implementation Date:** 12-Sep-25 Related CR: 2025251001

Change Requested	Demote a PT	Final Disposition	Final Placement	MedDRA Code #
PT to merge	*Petechiae*	Rejected		
To PT	*Haemorrhage subcutaneous*			

MSSO Comment: The proposal to demote the PT Petechiae under PT Haemorrhage subcutaneous is not approved. The generic LLT/PT Petechiae is retained at PT level because it represents the fundamental pathological event - small pinpoint hemorrhages in the skin or mucosa - without limiting it to a specific site. In contrast, the petechiae LLTs provide location (e.g., oral mucosal petechiae, vaginal petechiae, petechiae on lower extremities), offering precise codes for clinical detail when required, without overpopulating the PT level.

CR Number: 2025251002 **Implementation Date:** 12-Sep-25 Related CR: 2025251002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Sagittal imbalance*	Approved Not as Requested	Proposed LLT		
			Sagittal imbalance of spine	10093035	Current
			To PT		
			Spinal deformity	10058907	

MSSO Comment: The proposal to add a new term Sagittal imbalance is approved but not as requested. Sagittal imbalance specifically refers to abnormal alignment of the spine in the sagittal plane (side view), where the head and trunk no longer balance properly over the pelvis. The proposed term will be modified for clarity and added as LLT Sagittal imbalance of spine to PT Spinal deformity.

CR Number: 2025251003 **Implementation Date:** 12-Sep-25 Related CR: 2025251003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Spinal imbalance*	Approved as Requested	Proposed LLT		
			Spinal imbalance	10093034	Current
			To PT		
			Spinal deformity	10058907	

MSSO Comment: The proposal to add a new term Spinal imbalance is approved as requested. Spinal imbalance is a condition where the spine's normal alignment is disrupted, causing the head and trunk to shift abnormally forward, backward, or sideways relative to the pelvis. This misalignment, seen in either the sagittal or coronal plane, can lead to pain, fatigue, compensatory postures, and functional disability. Spinal imbalance will be added as LLT to PT Spinal deformity aligned with unspecific LLT Curvature of spine.

CR Number: 2025252001 **Implementation Date:** 16-Sep-25 Related CR: 2025252001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Lentiginous junctional nevus*	Approved as Requested	Proposed LLT		
			Lentiginous junctional nevus	10093036	Current
			To PT		
			Melanocytic naevus	10027145	

MSSO Comment: The proposal to add a new term Lentiginous junctional nevus is approved as requested. A lentiginous junctional nevus is a benign melanocytic nevus located at the dermoepidermal junction of the skin. Melanocytes are found at the interface between the epidermis and the dermis, in a linear pattern of proliferation of melanocytes along the basal layer of the epidermis. Lentiginous junctional nevus will be added as LLT to PT Melanocytic naevus. In a related change, the British English counterpart LLT Lentiginous junctional naevus will also be added to PT Melanocytic naevus.

Detail Report

CR Number: 2025253013 **Implementation Date:** 18-Sep-25 Related CR: 2025253013

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase decreased*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase decreased*		*Blood creatine phosphokinase decreased*	10067760	Current
			With LLT		
			Creatine kinase decreased	10073428	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase decreased with the LLT Creatine kinase decreased is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025253014 **Implementation Date:** 18-Sep-25 Related CR: 2025253014

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*CK decreased*	Approved as Requested	Proposed LLT		
To PT	*Creatine kinase decreased*		*CK decreased*	10093048	Current
			To PT		
			Creatine kinase decreased	10073428	

MSSO Comment: The proposal to add a new LLT CK decreased to PT Creatine kinase decreased is approved as requested. CK decreased is a common abbreviation for Creatine kinase decreased (promoted to PT level in change request 2025253013) and will be added as a synonym for ease of coding.

CR Number: 2025253015 **Implementation Date:** 18-Sep-25 Related CR: 2025253015

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase increased*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase increased*		*Blood creatine phosphokinase increased*	10005470	Current
			With LLT		
			Creatine kinase increased	10011336	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase increased with the LLT Creatine kinase increased is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

Detail Report

CR Number: 2025253016 **Implementation Date:** 18-Sep-25 Related CR: 2025253016

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase MB*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase MB*		*Blood creatine phosphokinase MB*	10005471	Current
			With LLT		
			Creatine kinase MB	10011337	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase MB with the LLT Creatine kinase MB is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025253017 **Implementation Date:** 18-Sep-25 Related CR: 2025253017

Change Requested	Rename PT/LLT	Final Disposition	Final Placement	MedDRA Code #	
Term to modify	*Blood creatine phosphokinase MB abnormal*	Approved Not as Requested	PT to merge		
Replacement term	*Blood creatine kinase MB abnormal*		*Blood creatine phosphokinase MB abnormal*	10005472	Current
			To PT		
			Creatine kinase MB abnormal	10093044	

MSSO Comment: The proposal to rename PT/LLT Blood creatine phosphokinase MB abnormal to Blood creatine kinase MB abnormal is approved but not as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names. Blood creatine phosphokinase MB abnormal will be demoted to new PT Creatine kinase MB abnormal, which will be added in change request 2025253019.

CR Number: 2025253018 **Implementation Date:** 18-Sep-25 Related CR: 2025253018

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*CK-MB abnormal*	Approved as Requested	Proposed LLT		
			CK-MB abnormal	10093047	Current
			To PT		
			Creatine kinase MB abnormal	10093044	

MSSO Comment: The proposal to add a new LLT CK-MB abnormal is approved as requested. CK-MB abnormal is a common, internationally recognized abbreviation for Creatine kinase MB abnormal. CK-MB abnormal will be added as LLT to new PT Creatine kinase MB abnormal which was added in change request 2025253019.

Detail Report

CR Number: 2025253019 **Implementation Date:** 18-Sep-25 Related CR: 2025253019

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Creatine kinase MB abnormal*	Approved Not as Requested	Proposed PT	
			Creatine kinase MB abnormal	10093044
			HLT primary	
			Skeletal and cardiac muscle analyses	10040768
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Creatine kinase MB abnormal is approved but not as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names. Creatine kinase MB abnormal will be added as specimen type free PT to HLT Skeletal and cardiac muscle analyses.

CR Number: 2025253020 **Implementation Date:** 18-Sep-25 Related CR: 2025253020

Change Requested	Rename PT/LLT	Final Disposition	Final Placement	MedDRA Code #

MSSO Comment: The proposal to add a new LLT Creatine kinase MB decreased is approved but not as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names. Creatine kinase MB decreased will be added as PT to HLT Skeletal and cardiac muscle analyses.

Detail Report

CR Number: 2025253022 **Implementation Date:** 18-Sep-25 Related CR: 2025253022

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase MB increased*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase MB increased*		*Blood creatine phosphokinase MB increased*	10005474	Current
			With LLT		
			Creatine kinase MB increased	10011339	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase MB increased with the LLT Creatine kinase MB increased is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025253023 **Implementation Date:** 18-Sep-25 Related CR: 2025253023

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase MB normal*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase MB normal*		*Blood creatine phosphokinase MB normal*	10005475	Current
			With LLT		
			Creatine kinase MB normal	10011340	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase MB normal with the LLT Creatine kinase MB normal is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025253024 **Implementation Date:** 18-Sep-25 Related CR: 2025253024

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*CK-MB normal*	Approved as Requested	Proposed LLT		
			CK-MB normal	10093046	Current
			To PT		
			Creatine kinase MB normal	10011340	

MSSO Comment: The proposal to add a new LLT CK-MB normal is approved as requested. CK-MB normal is a common, internationally recognized abbreviation for Creatine kinase MB normal. CK-MB normal will be added as LLT to PT Creatine kinase MB normal, which was promoted in change request 2025253023.

Detail Report

CR Number: 2025253025 **Implementation Date:** 18-Sep-25 Related CR: 2025253025

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase MM*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase MM*		*Blood creatine phosphokinase MM*	10005476	Current
			With LLT		
			Creatine kinase MM	10011341	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase MM with the LLT Creatine kinase MM is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025253026 **Implementation Date:** 18-Sep-25 Related CR: 2025253026

Change Requested	Rename PT/LLT	Final Disposition	Final Placement	MedDRA Code #

			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Creatine kinase MM increased is approved but not as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names. Creatine kinase MM increased will be added as specimen type free PT to HLT Skeletal and cardiac muscle analyses.

CR Number: 2025253030 **Implementation Date:** 18-Sep-25 Related CR: 2025253030

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase MM normal*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase MM normal*		*Blood creatine phosphokinase MM normal*	10005478	Current
			With LLT		
			Creatine kinase MM normal	10011342	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase MM normal with the LLT Creatine kinase MM normal is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

Detail Report

CR Number: 2025253031 **Implementation Date:** 18-Sep-25 Related CR: 2025253031

Change Requested	Swap a PT with an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Blood creatine phosphokinase normal*	Approved as Requested	Proposed PT		
With LLT	*Creatine kinase normal*		*Blood creatine phosphokinase normal*	10005479	Current
			With LLT		
			Creatine kinase normal	10011343	

MSSO Comment: The proposal to swap the PT Blood creatine phosphokinase normal with the LLT Creatine kinase normal is approved as requested. According to MedDRA conventions, the specimen type for lab values is on LLT level, while the PT is usually specimen type free. This also aligns with the LOINC standard, as well as the fact, that IUPAC and IFCC standards do not include specimen types in the analyte names.

CR Number: 2025254000 **Implementation Date:** 18-Sep-25 Related CR: 2025254000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Tilted optic nerve cup*	Approved as Requested	Proposed LLT		
			Tilted optic nerve cup	10093039	Current
			To PT		
			Optic nerve cupping	10030931	

MSSO Comment: The proposal to add a new term Tilted optic nerve cup is approved as requested. Tilted optic nerve cup can be considered a descriptive term used in imaging and clinical reports to indicate an eccentric or obliquely shaped optic cup within the disc. Tilted optic nerve cup will be added as LLT to PT Optic nerve cupping.

CR Number: 2025254001 **Implementation Date:** 18-Sep-25 Related CR: 2025254001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Infrared spectroscopy*	Approved as Requested	Proposed PT	
			Infrared spectroscopy	10093038
			HLT primary	
			Investigations NEC	10022892
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term Infrared spectroscopy is approved as requested. Infrared spectroscopy is an analytical technique used to identify chemical compounds and explore their structures based on the interaction of infrared radiation with matter by measuring the molecules absorption of infrared radiation. It is primarily an analytical technique which detects the molecular fingerprint of a sample (tissue, fluid, culture). Infrared spectroscopy will be added as PT to the HLT Investigations NEC.

Detail Report

CR Number: 2025254002 **Implementation Date:** 18-Sep-25 Related CR: 2025254002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Treponema pallidum antibody test positive*	Approved as Requested	Proposed LLT		
			Treponema pallidum antibody test positive	10093049	Current
			To PT		
			Syphilis test positive	10051317	

MSSO Comment: The proposal to add a new term Treponema pallidum antibody test positive is approved as requested. Treponema pallidum antibody is a generic term for a treponemal test that detects antibodies specific to Treponema pallidum which, once positive, usually remains so for life. It encompasses techniques such as FTA-ABS, TPHA, MHA-TP, etc. Treponema pallidum antibody test positive represents the positive outcome of such group of tests, and will be added as LLT to the PT Syphilis test positive, as a qualified counterpart of existing LLT Treponema pallidum antibody.

CR Number: 2025254003 **Implementation Date:** 18-Sep-25 Related CR: 2025254003

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Liver insufficiency*	Rejected		

MSSO Comment: The proposal to add a new PT Liver insufficiency is not approved. In most medical references, insufficiency and failure are used synonymously. Other terminology classifications have Hepatic failure as the disorder with insufficiency being an acceptable synonym. The requested concept already exists in MedDRA as LLT Hepatic insufficiency under PT Hepatic failure.

CR Number: 2025254004 **Implementation Date:** 18-Sep-25 Related CR: 2025254004

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Anti SCL70 Negative*	Approved Not as Requested	Proposed LLT		
To PT	*Antinuclear antibody negative*		*Anti-SCL 70 negative*	10093050	Current
			To PT		
			Antinuclear antibody negative	10002809	

MSSO Comment: The proposal to add a new LLT Anti SCL70 Negative to PT Antinuclear antibody negative is approved but not as requested. Anti-SCL 70 antibodies are primarily associated with scleroderma. They are also found in a smaller percentage of patients with other autoimmune disorders, such as lupus and rheumatoid arthritis. Proposed term will be modified for MedDRA capitalization and punctuation conventions and added as LLT Anti-SCL 70 negative to PT Antinuclear antibody negative.

Detail Report

CR Number: 2025254005 **Implementation Date:** 18-Sep-25 Related CR: 2025254005

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Anti SCL70 Positive*	Approved Not as Requested	Proposed LLT		
To PT	*Antinuclear antibody positive*		*Anti-SCL 70 positive*	10093051	Current
			To PT		
			Antinuclear antibody positive	10060055	

MSSO Comment: The proposal to add a new LLT Anti SCL70 Positive to PT Antinuclear antibody positive is approved but not as requested. Anti-SCL 70 antibodies are primarily associated with scleroderma. They are also found in a smaller percentage of patients with other autoimmune disorders, such as lupus and rheumatoid arthritis. Proposed term will be modified for MedDRA capitalization and punctuation conventions and added as LLT Anti-SCL 70 positive to PT Antinuclear antibody positive.

CR Number: 2025254006 **Implementation Date:** 18-Sep-25 Related CR: 2025254006

Change Requested	Rename HLT	Final Disposition	Final Placement	MedDRA Code #
Term to modify	*Parainfluenzae viral infections*	Approved as Requested	Term to modify	
Replacement term	*Parainfluenza viral infections*		*Parainfluenzae viral infections*	10033796
			Replacement term	
			Parainfluenza viral infections	10033796

MSSO Comment: The proposal to rename the HLT Parainfluenzae viral infections to Parainfluenza viral infections is approved as requested. This update corrects the spelling of ‘Parainfluenzae’ to the appropriate name of ‘Parainfluenza’.

CR Number: 2025255000 **Implementation Date:** 18-Sep-25 Related CR: 2025255000

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Pain loin*	Approved as Requested	Proposed LLT		
From PT	*Back pain*		*Pain loin*	10033460	Current
To PT	*Flank pain*		From PT		
			Back pain	10003988	
			To PT		
			Flank pain	10016750	

MSSO Comment: The proposal to move the LLT Pain loin from PT Back pain to PT Flank pain is approved as requested for better alignment. In reference to batch 10121702 and for better alignment, move LLT Pain loin from PT Back pain to PT Flank pain.

Detail Report

CR Number: 2025258002 **Implementation Date:** 18-Sep-25 Related CR: 2025258002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Arrhythmology visit*	Rejected		

MSSO Comment: The proposal to add a new term Arrhythmology visit is not approved. Arrhythmology is a specialty within cardiology that specializes in the treatment of heart rhythm disorders. Proposed concept may be captured with existing concept LLT Cardiologist consultation.

CR Number: 2025258003 **Implementation Date:** 18-Sep-25 Related CR: 2025258003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Mesenteric resection*	Approved as Requested	Proposed PT	
			Mesenteric resection	10093052
			HLT primary	
			Gastrointestinal therapeutic procedures NEC	10018013
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Mesenteric resection is approved as requested. Mesenteric resection is directed toward the primary pathology of the accompanying organ. The most surgical common procedure that includes resection of the mesentery is small bowel resection. Mesenteric resection will be added as PT to HLT Gastrointestinal therapeutic procedures NEC.

CR Number: 2025259000 **Implementation Date:** 18-Sep-25 Related CR: 2025259000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Acute bacterial sinusitis*	Rejected		

MSSO Comment: The proposal to add a new term Acute bacterial sinusitis is not approved. MedDRA has LLT/PT Acute sinusitis and LLT/PT Sinusitis bacterial. Moreover, bacterial sinusitis usually presents in the acute form.

Detail Report

Proposed Term	*Pulmonary foreign body*	Approved Not as Requested	Proposed LLT		
			Foreign body in lung	10093055	Current
			To PT		
			Foreign body in respiratory tract	10079847	

MSSO Comment: The proposal to add a new term Pulmonary foreign body is approved but not as requested. A foreign body in the lung occurs when a foreign body enters the respiratory tract and becomes lodged in the lungs. The proposed term will be modified for better alignment and added as LLT Foreign body in lung to PT Foreign body in respiratory tract.

CR Number: 2025260003 **Implementation Date:** 19-Sep-25 Related CR: 2025260003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Celiac artery dissection*	Approved as Requested	Proposed LLT		
			Celiac artery dissection	10093057	Current
			To PT		
			Coeliac artery dissection	10093056	

MSSO Comment: The proposal to add a new term Celiac artery dissection is approved as requested. Celiac artery dissection is usually iatrogenic or secondary to atherosclerosis, trauma, pregnancy, fibromuscular dysplasia, inflammatory or infectious diseases, or congenital disorder of the vascular wall. Celiac artery dissection will be added as LLT to new PT Coeliac artery dissection. In a related change, new PT Coeliac artery dissection will be added to primary HLT Gastrointestinal vascular malformations and secondary HLT Aneurysms and dissections site specific NEC and secondary HLT Gastrointestinal and hepatobiliary procedural complications.

Detail Report

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Ova and parasite test(o&p stool test)*	Approved Not as Requested	Proposed LLT		
			Ova and parasite test	10093070	Current
			To PT		
			Parasite stool test	10060812	

MSSO Comment: The proposal to add a new LLT Ova and parasite test(o&p stool test) is approved but not as requested. Ova and parasite test is the classic stool parasite test, in which a stool sample is examined under a microscope for eggs, cysts, and adult parasites. Other parasite stool tests include modern investigation techniques like antigen detection or DNA testing. The proposed term will be modified to exclude the acronym in parenthesis and added as LLT Ova and parasite test to PT Parasite stool test.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Chronic histiocytic intervillositis*	Approved as Requested	Proposed PT	
			Chronic histiocytic intervillositis	10093066
			HLT primary	
			Placental abnormalities (excl neoplasms)	10035130
			SOC primary	
			Pregnancy, puerperium and perinatal conditions	10036585
			HLT secondary	
			Immune and associated conditions NEC	10027682
			SOC secondary	
			Immune system disorders	10021428

MSSO Comment: The proposal to add a new term Chronic histiocytic intervillositis is approved as requested. Chronic histiocytic intervillositis (CHI) is defined by a diffuse infiltration of monocytes into the intervillous space, which often leads to poor obstetrical outcomes, including recurrent intrauterine growth restriction, miscarriage, and fetal death. Although its underlying aetiology is unclear, due to the presence of maternal macrophages and the reported increased incidence in women with autoimmune disease, CHI is hypothesized to be an inappropriate immune response to the semi-allogeneic foetus. Chronic histiocytic intervillositis will be added as PT to primary HLT Placental abnormalities (excl neoplasms) and to secondary HLT Immune and associated conditions NEC.

Proposed Term	*Polyminimyoclonus in hirayama disease*	Approved Not as Requested	Proposed LLT	
			Polyminimyoclonus	10093071 Current
			To PT	
			Myoclonus	10028622

MSSO Comment: The proposal to add a new term Polyminimyoclonus in hirayama disease is approved but not as requested. Polyminimyoclonus is defined as intermittent, arrhythmic, low-amplitude myoclonic jerks, typically affecting multiple fingers simultaneously, most evident during posture maintenance or early phases of voluntary movement. It is thought to arise from pathological motor unit instability, often in the context of anterior horn cell disorders, motor neuron disease, or hereditary motor neuropathies. Hirayama disease may be represented by its synonym LLT/PT Monomelic amyotrophy. The proposed term will be modified to a general symptom and added as LLT Polyminimyoclonus to PT Myoclonus.

Proposed Term	*Ivor lewis esophagectomy*	Approved Not as Requested	Proposed LLT		
			Ivor Lewis esophagectomy	10093067	Current
			To PT		
			Oesophagectomy	10030215	

MSSO Comment: The proposal to add a new term Ivor lewis esophagectomy is approved but not as requested. The Ivor Lewis esophagectomy is a two-stage surgical procedure for mid and distal esophageal cancer, involving gastric conduit creation followed by intrathoracic esophagogastric anastomosis. It is an internationally established and widely practiced approach, with both open and minimally invasive variants. The proposed term will be modified for MedDRA capitalization rules and added as LLT Ivor Lewis esophagectomy to PT Oesophagectomy. In a related change, the British English spelled counterpart LLT Ivor Lewis oesophagectomy will also be added to PT Oesophagectomy.

Proposed PT	*Hyperthermia malignant*	Approved as Requested	Proposed PT	
Old Primary SOC	*General disorders and administration site conditions*		*Hyperthermia malignant*	10020844
New Primary SOC	*Congenital, familial and genetic disorders*		Old Primary SOC	
			General disorders and administration site conditions	10018065
			New Primary SOC	
			Congenital, familial and genetic disorders	10010331

MSSO Comment: The proposal to reassign the primary SOC of PT Hyperthermia malignant from current SOC General disorders and administration site conditions to SOC Congenital, familial and genetic disorders is approved as requested. Malignant hyperthermia (MH) is a genetic disease that causes a life-threatening reaction to certain anesthesia medications. MH occurs in genetically predisposed individuals exposed to inhalation anesthetics or succinylcholine. The genetic defects identified so far cause perturbation of skeletal muscle excitation–contraction coupling resulting in myoplasmic calcium dysregulation. The most commonly involved gene is RYR1.

			Blood and lymphatic system disorders	10005329

MSSO Comment: The proposal to add a new PT Natural killer/t-cell lymphoma is approved but not as requested after suspension. NK/T-cell lymphoma is an aggressive type of non-Hodgkin lymphoma that arises from natural killer (NK) cells or, less commonly, cytotoxic T cells. It most often involves the nasal cavity and upper aerodigestive tract and is strongly associated with Epstein–Barr virus (EBV) infection. The proposed term will be modified for MedDRA capitalization conventions and added as PT Natural killer/T-cell lymphoma to bi-axial HLT Peripheral T-cell lymphomas NEC (primary SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) to secondary SOC Blood and lymphatic system disorders).

CR Number: 2025262011 **Implementation Date:** 26-Sep-25 Related CR: 2025262011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Incision site granuloma*	Rejected		

MSSO Comment: The proposal to add a new PT Incision site granuloma is not approved. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding the coding of combination terms. The most common cause of granuloma at incision site is the suture. Other instances may be captured by LLT/PT Granuloma skin and LLT/PT Incision site complication, depending on case scenario.

Detail Report

CR Number: 2025262012 **Implementation Date:** 26-Sep-25 Related CR: 2025262012

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Tracheitis sicca*	Approved as Requested	Proposed PT	
			Tracheitis sicca	10093078
			HLT primary	
			Tracheal disorders (excl infections and neoplasms)	10044288
			SOC primary	
			Respiratory, thoracic and mediastinal disorders	10038738
			HLT secondary	
			Respiratory tract and thoracic cavity procedural complications	10052823
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new PT Tracheitis sicca is approved as requested. Tracheitis sicca is a rare condition that occurs due to drying and crusting of the tracheal mucosa, typically following an injury to the airway. It is a complication that has been observed most often in patients who have undergone endotracheal intubation or have a tracheostomy. Tracheitis sicca will be added as PT to primary HLT Tracheal disorders (excl infections and neoplasms) and secondary HLT Respiratory tract and thoracic cavity procedural complications.

CR Number: 2025262013 **Implementation Date:** 08-Oct-25 Related CR: 2025262013

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Satellitosis*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Satellitosis is not approved after suspension. Satellitosis can refer to several distinct phenomena occurring in different contexts such as around white blood cells, typically in a blood sample after exposure to the anticoagulant EDTA, and perineuronal satellitosis or perivascular satellitosis which involves glial cells or neoplastic cells surrounding neurons or blood vessels in the nervous system. As such, the unqualified term is ambiguous without medical context.

Detail Report

CR Number: 2025264000 **Implementation Date:** 26-Sep-25 Related CR: 2025264000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Testicular neoplasm surgery*	Rejected		

MSSO Comment: The proposal to add a new term Testicular neoplasm surgery is not approved. This is a multiple concept term combining several qualifiers which can be coded using more than one MedDRA term. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding the coding of combination terms.

CR Number: 2025265000 **Implementation Date:** 26-Sep-25 Related CR: 2025265000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Dialysis device removal*	Approved Not as Requested	Proposed PT	
			Dialysis access removal	10093083
			HLT primary	
			Renal therapeutic procedures	10023431
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Dialysis device removal is approved but not as requested. Dialysis device removal refers to the removal of a dialysis access device, which may be a central venous catheter (tunneled or non-tunneled) used for hemodialysis, an arteriovenous fistula graft or prosthetic graft when explantation is required, or a peritoneal catheter for peritoneal dialysis. The procedure consists of removing the dialysis access when it is no longer needed, is malfunctioning, infected, or must be replaced by another access. The proposed term will be modified for greater clarity and added as PT Dialysis access removal to HLT Renal therapeutic procedures, to complement existing PT Dialysis device insertion.

CR Number: 2025265001 **Implementation Date:** 26-Sep-25 Related CR: 2025265001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Arteriovenous graft removal*	Approved as Requested	Proposed PT	
			Arteriovenous graft removal	10093084
			HLT primary	
			Vascular therapeutic procedures NEC	10047094
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Arteriovenous graft removal is approved as requested. Arteriovenous graft (AVG) removal, known as AVG excision, is a surgical procedure to remove an AVG, often due to complications like infection, blood clots, or mechanical issues like weakening of the artery. Arteriovenous graft removal will be added as a PT to HLT Vascular therapeutic procedures NEC.

CR Number: 2025265002 **Implementation Date:** 26-Sep-25 Related CR: 2025265002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Arteriovenous graft placement*	Approved as Requested	Proposed PT	
			Arteriovenous graft placement	10093085
			HLT primary	
			Vascular therapeutic procedures NEC	10047094
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Arteriovenous graft placement is approved as requested. Arteriovenous (AV) graft placement is a surgical procedure to create a connection between an artery and a vein, usually in the arm or leg, using a synthetic tube for hemodialysis access. Arteriovenous graft placement will be added as a PT to HLT Vascular therapeutic procedures NEC. In a related change, PT Arteriovenous graft will be demoted to new PT Arteriovenous graft placement in order to have the more precise concept at the PT level.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Graft versus host disease of the kidney*	Approved as Requested	Proposed PT	
			Graft versus host disease of the kidney	10093086
			HLT primary	
			Immune and associated conditions NEC	10027682
			SOC primary	
			Immune system disorders	10021428
			HLT secondary	
			Renal failure and impairment	10038443
			SOC secondary	
			Renal and urinary disorders	10038359
			HLT secondary	
			Transplantation complications	10074474
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new term Graft versus host disease of the kidney is approved as requested. Graft-versus-host disease (GVHD) is a serious complication of bone marrow and stem cell transplantation, but also less frequently due to solid organ transplants, which can affect skin, mouth, eyes, serous membranes, liver, gastrointestinal and respiratory tracts, and the musculoskeletal, hematopoietic, and immune systems. While the incidence of acute kidney injury varies, renal involvement secondary to GVHD is considered rare. Graft versus host disease of the kidney will be added as a PT to primary HLT Immune and associated conditions NEC, to secondary HLT Renal failure and impairment and to secondary HLT Transplantation complications.

CR Number: 2025265004 **Implementation Date:** 26-Sep-25 Related CR: 2025265004

Proposed Term	*Segmental vitiligo*	Approved as Requested	Proposed LLT		
			Segmental vitiligo	10093087	Current
			To PT		
			Vitiligo	10047642	

MSSO Comment: The proposal to add a new term Segmental vitiligo is approved as requested. Segmental vitiligo is an early-onset form of the disease marked by unilateral depigmented patches that spread rapidly at first and then stabilize, often following a dermatomal pattern. It is less often linked to autoimmune conditions and commonly involves leukotrichia in the affected area. Segmental vitiligo will be added as a sub-concept LLT to PT Vitiligo

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Immune-mediated gastric mucocal damage*	Rejected		

MSSO Comment: The proposal to add a new term Immune-mediated gastric mucocal damage is not approved. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. When considering the addition of such combination terms, MedDRA generally attempts to limit inclusion to those terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Gastric mucosal damage is a descriptive term. Concept can be represented by existing LLT/PT Immune-mediated gastritis or a combination of existing terms depending on your specific scenario.

CR Number: 2025265006 **Implementation Date:** 26-Sep-25 Related CR: 2025265006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Immune-mediated esophageal mucosal damage*	Rejected		

MSSO Comment: The proposal to add a new term Immune-mediated esophageal mucosal damage is not approved. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. When considering the addition of such combination terms, MedDRA generally attempts to limit inclusion to those terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Esophageal mucosal damage is a descriptive term. Concept can be represented by existing LLT/PT Immune-mediated oesophagitis or a combination of existing terms depending on your specific scenario.

Detail Report

CR Number: 2025266000 **Implementation Date:** 26-Sep-25 Related CR: 2025266000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Eosinophilic bronchiolitis*	Approved Not as Requested	Proposed PT	
			Eosinophilic bronchiolitis	10093089
			HLT primary	
			Bronchial conditions NEC	10006429
			SOC primary	
			Respiratory, thoracic and mediastinal disorders	10038738
			HLT secondary	
			Eosinophilic disorders	10052828
			SOC secondary	
			Blood and lymphatic system disorders	10005329

MSSO Comment: The proposal to add a new LLT Eosinophilic bronchiolitis is approved but not as requested. Eosinophilic bronchiolitis primarily affects the bronchioles, presenting with dyspnea, wheezing, air trapping, and CT changes such as mosaic pattern and centrilobular nodules. It is often associated with severe asthma or other systemic eosinophilic diseases. It differs from eosinophilic bronchitis in that the latter affects the large and medium-sized bronchi and is characterized by chronic cough with eosinophilic sputum, but without bronchial hyperreactivity or the variable obstruction typical of asthma. Eosinophilic bronchiolitis will be added as new PT to primary HLT Bronchial conditions NEC and secondary HLT Eosinophilic disorders.

CR Number: 2025266001 **Implementation Date:** 26-Sep-25 Related CR: 2025266001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Complexion-associated melanosis*	Approved Not as Requested	Proposed PT	
			Complexion-associated melanosis	10093088
			HLT primary	
			Ocular neoplasms benign	10030056
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Ocular neoplasms benign	10030056
			SOC secondary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new LLT Complexion-associated melanosis is approved but not as requested. Complexion-associated melanosis (CAM) is a benign lesion found among darkly pigmented individuals. It is typically observed around the limbus. On examination, the pigmentation appears flat and non-cystic. It can cover the conjunctiva extensively and increase in size with age. Complexion-associated melanosis will be added as new PT to bi-axial HLT Ocular neoplasms benign (primary SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) and secondary SOC Eye disorders).

MSSO Comment: The proposal to add PT Low-luminance deficit to Retinal disorders (SMQ) as a Broad term is approved as requested. Low-luminance deficit (LLD) is defined as the difference between visual acuity measured under standard (photopic) lighting conditions and visual acuity measured under low-luminance conditions (typically using a neutral density filter). It quantifies how much a person's visual performance declines when light levels are reduced, and is used as a sensitive indicator of early retinal dysfunction. Low-luminance deficit matches the inclusion criteria and will be added to the broad scope of Retinal disorders (SMQ).

MSSO Comment: The proposal to add PT Pulmonary lymphomatoid granulomatosis to Malignant lymphomas (SMQ) as a Narrow term is approved as requested. Pulmonary lymphomatoid granulomatosis (PLG) is a rare, Epstein-Barr virus (EBV)-associated, malignant B-cell lymphoproliferative disorder, primarily affecting the lungs, but also potentially involving other organs. Although classified as an EBV-associated B-cell lymphoproliferative disorder of the lung with an angioinvasive/angiodestructive reactive T-cell infiltrate, a relevant percentage of cases can develop into severe lymphoma. Pulmonary lymphomatoid granulomatosis will be added to the narrow scope of Malignant lymphomas (SMQ).

MSSO Comment: The proposal to add PT Sagging eye syndrome to Ocular motility disorders (SMQ) as a Narrow term is approved as requested. Sagging eye syndrome is an age-related condition in which mechanical displacements of the ocular muscles occur due to physical changes of the orbital contents. It is one of the most common causes of diplopia in older adults. Sagging eye syndrome will be added as a narrow search term to Ocular motility disorders (SMQ).

Detail Report

			0	

MSSO Comment: The proposal to add PT Schwartz-Matsuo syndrome to Retinal disorders (SMQ) as a Narrow term is approved as requested. Schwartz-Matsuo syndrome a rhegmatogenous retinal detachment that, in addition to separating the retina, causes the release of pigment epithelial cells and photoreceptors into the aqueous humor. These cells obstruct the trabecular meshwork and raise intraocular pressure, resulting in a secondary glaucoma with mild inflammation. A triad of aqueous cells in the anterior chamber, rhegmatogenous retinal detachment, and elevated intraocular pressure is required for the diagnosis of Schwartz-Matsuo syndrome. Schwartz-Matsuo syndrome will be added as narrow search term to SMQ Retinal disorders (SMQ).

MSSO Comment: The proposal to add PT Low-luminance deficit to Lens disorders (SMQ) as a Broad term is approved as requested. Low-luminance deficit (LLD) is defined as the difference between visual acuity measured under standard (photopic) lighting conditions and visual acuity measured under low-luminance conditions (typically using a neutral density filter). It quantifies how much a person's visual performance declines when light levels are reduced. Low-luminance deficit will be added to the broad scope of Lens disorders (SMQ).

MSSO Comment: The proposal to add PT Anorectal wound to Accidents and injuries (SMQ) as a Narrow term is approved as requested. An anorectal wound is a tear, cut, or injury to the tissues of the anus and rectum. Although they have many etiologies, they are commonly caused by trauma and accidental injuries. This SMQ contains several "wound" terms and, because this particular term specifies an anatomic location, it will be included in the narrow search terms of this SMQ.

MSSO Comment: The proposal to add PT Benign familial infantile epilepsy to Convulsions (SMQ) as a Narrow term is approved as requested. Benign familial infantile epilepsy (BFIE) is a genetic epileptic syndrome characterized by the occurrence of afebrile repeated seizures in healthy infants, between the third and eighth month of life. Although the prognosis for BFIE is generally excellent, somewhere between 10-30% of affected individuals may have recurrent seizures later in life, and in rare cases, develop intellectual disabilities or other neurological issues. Since this term describes a specific type of epilepsy, it will be added to the narrow search terms of this SMQ.

MSSO Comment: The proposal to add PT Corneal epithelium injury to Accidents and injuries (SMQ) as a Narrow term is approved as requested. A corneal epithelium injury is a superficial damage to the outermost layer of the cornea, usually from trauma, foreign bodies, or chemical/thermal causes. Such injuries typically heal quickly and have a low risk of scarring. This term, which describes a specific type of injury, will be added to the narrow search terms of this SMQ.

MSSO Comment: The proposal to add PT HCN1 gene mutation to Convulsions (SMQ) as a Broad term is approved as requested. The HCN1 gene, also known as potassium/sodium hyperpolarization-activated cyclic nucleotide-gated channel, is a gene that encodes a protein involved in the ion channel activity in neurons. Mutations in the HCN1 gene have been implicated in certain neurological disorders, particularly epilepsy. Over two dozen pathogenic epilepsy variants in this gene have been identified. Since there is some variability in the clinical expression of mutations of these gene, it will be added to the broad search terms of this SMQ.

MSSO Comment: The proposal to add PT Lacrimal canalicular laceration to Accidents and injuries (SMQ) as a Narrow term is approved as requested. Lacrimal canalicular lacerations usually result from facial trauma with injury to the lacrimal drainage system. Dog bites are a common cause of these lacerations because of the propensity of this type of injury to occur near the medial canthus. Blunt shear injuries are another mechanism. This term describes a specific type of injury and will be added to the narrow search terms of this SMQ.

MSSO Comment: The proposal to add PT Optic ataxia to Conditions associated with central nervous system haemorrhages and cerebrovascular accidents (SMQ) as a Narrow term is approved as requested. Optic ataxia is characterized by impaired visual control of the direction of an arm reaching to a visual target, accompanied by defective hand orientation and grip formation. In humans, optic ataxia is associated with lesions of the superior parietal lobule, which also affect visually guided saccades and other forms of eye–hand coordination. This term will be added to the narrow search of this SMQ which include conditions that may result in either ischemic or hemorrhagic cerebrovascular accidents.

MSSO Comment: The proposal to add PT Phosphorylated tau increased to Dementia (SMQ) as a Narrow term is approved as requested. Accumulation of phosphorylated tau is a key pathological feature of Alzheimer's disease. Its presence correlates with the severity of cognitive decline, making it a key biomarker for early diagnosis and progression monitoring of Alzheimer’s disease. Based upon the high specificity of this marker, it will be added to the narrow search terms of this SMQ.

MSSO Comment: The proposal to add PT Transplant associated thrombotic microangiopathy to Haemolytic disorders (SMQ) as a Narrow term is approved as requested. PT Transplant associated thrombotic microangiopathy was added in version 29.0 and represents a triad of endothelial cell activation, complement dysregulation and microvascular hemolytic anemia. Its addition with narrow scope is in line with the inclusion criterion for narrow terms: "Terms indicating hemolysis, i.e., containing the words “haemolysis” or “haemolytic,” are generally included" and consistent with the already included PT Microangiopathic haemolytic anaemia.

CR Number: 2025267044 **Implementation Date:** 26-Sep-25 Related CR: 2025267044

			0	

MSSO Comment: The proposal to add PT Apolipoprotein C-III increased to Dyslipidaemia (SMQ) as a Narrow term is approved as requested. PT Apolipoprotein C-III increased was added in version 29.0. Apolipoprotein C-III is a potent modulator of plasma triglyceride levels through effects in the intestine, plasma (inhibition of LPL hydrolysis of triglyceride-rich lipoproteins), and liver. Plasma apolipoprotein C-III concentration ranges from ≈10 mg/dL in normal humans to >30 mg/dL in hypertriglyceridemic subjects.

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome*	Approved as Requested	Proposed PT *Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome*	10092834
To SMQ	*Demyelination (SMQ)*		To SMQ *Demyelination (SMQ)*	20000154
Term scope	*Narrow*		Term scope *Narrow*	
			Term_category *A*	
			Term_weight *0*	

MSSO Comment: The proposal to add PT Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome to Demyelination (SMQ) as a Narrow term is approved as requested. Progressive multifocal leukoencephalopathy (PML) can occur in the context of immune reconstitution inflammatory syndrome (so called PML-IRIS). In PML-IRIS, lymphocytes infiltrate the CNS and attack JC virus-infected cells. This inflammatory reaction amplifies tissue damage, worsening demyelination. Because of the demyelinative pathology associated with this condition, it will be added to the narrow search terms of this SMQ.

CR Number: 2025267046 **Implementation Date:** 26-Sep-25 Related CR: 2025267046

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Anti-JC virus antibody positive*	Approved as Requested	Proposed PT *Anti-JC virus antibody positive*	10092894
To SMQ	*Demyelination (SMQ)*		To SMQ *Demyelination (SMQ)*	20000154
Term scope	*Broad*		Term scope *Broad*	
			Term_category *A*	
			Term_weight *0*	

MSSO Comment: The proposal to add PT Anti-JC virus antibody positive to Demyelination (SMQ) as a Broad term is approved as requested. A positive John Cunningham (JC) virus antibody test indicates that an individual has been exposed to the JC virus at some point. A positive result is the first step in determining the risk of developing progressive multifocal leukoencephalopathy (PML). PML is characterized by widespread central nervous system demyelination and other JC virus investigation terms have been included in the broad search terms of this SMQ.

MSSO Comment: The proposal to add PT Multiple self-healing squamous epithelioma to Skin tumours of unspecified malignancy (SMQ) as a Narrow term is approved as requested. Multiple self-healing squamous epithelioma, also known as Ferguson-Smith disease, is a rare inherited skin cancer syndrome characterized by the development of multiple locally invasive skin tumors resembling keratoacanthomas of the face and limbs which usually heal spontaneously after several months leaving pitted scars. Multiple self-healing squamous epithelioma will be added to the narrow scope of Skin tumours of unspecified malignancy (SMQ).

MSSO Comment: The proposal to add PT Subclavian artery angioplasty to Ischaemic central nervous system vascular conditions (SMQ) as a Narrow term is approved as requested. Subclavian artery angioplasty is a minimally invasive procedure to widen a narrowed subclavian artery (often using a stent) to restore normal blood flow. It is used to treat conditions like subclavian steal syndrome; a condition associated with vertebral artery hypoperfusion and ischemic strokes in the posterior cerebral circulation. This corrective procedure for an ischemic stroke risk factor will be included in this SMQ that contains only narrow terms.

MSSO Comment: The proposal to add PT Orthosis application to Osteoporosis/osteopenia (SMQ) as a Broad term is approved as requested. An orthosis is a mechanical device applied to the body in order to support a body segment, correct anatomical alignment, protect a body part, or assist motion to improve body function. Examples include spinal orthosis in the management of osteoporotic vertebral fractures to reduce pain and improve functional outcomes, postural stability and reduce kyphotic deformity. The PT will be added as a Broad term similar to existing PTs such as External fixation of fracture and Spinal prosthesis user.

			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Inferior vena cava compression to Retroperitoneal fibrosis (SMQ) as a Narrow term is approved as requested. Retroperitoneal fibrosis is a condition whose fibrotic process begins in the retroperitoneum just below the level of the renal arteries and gradually expands, encasing the ureters, inferior vena cava, aorta, mesenteric vessels, or sympathetic nerves. Inferior Vena Cava (IVC) compression refers to the partial or complete obstruction of the IVC, often resulting in lower extremity edema, abdominal distention, or impaired venous return. The PT Inferior vena cava compression will be added to this SMQ as a Narrow term similar to the existing PT Inferior vena cava syndrome.

MSSO Comment: The proposal to add PT Subclavian artery angioplasty to Other ischaemic heart disease (SMQ) as a Broad term is approved as requested. Subclavian artery angioplasty is a minimally invasive endovascular procedure used to treat stenosis or occlusion of the subclavian artery by dilating the narrowed segment, often with stent placement, to restore normal blood flow. It is indicated in conditions such as subclavian coronary steal syndrome, where a proximal subclavian stenosis causes retrograde flow through a left internal mammary artery (LIMA) graft, diverting blood away from the coronary circulation and resulting in myocardial ischemia. The PT will be added as Broad term to the SMQ.

			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Diastolic hyperaemia-free ratio to Other ischaemic heart disease (SMQ) as a Narrow term is approved as requested. The Diastolic hyperaemia-free ratio (DFR) is a physiological index used in cardiac catheterization to assess the severity of coronary artery stenosis. DFR measures the pressure difference across a blockage during diastole without inducing artificial hyperemia (increased blood flow) with medications like adenosine. This term will be added as a Narrow term similar to the existing PT Coronary artery stenosis as it denotes the existence of the condition of coronary stenosis.

MSSO Comment: The proposal to add PT Cardiac allograft vasculopathy to Cardiac failure (SMQ) as a Broad term is approved as requested. Cardiac allograft vasculopathy is a chronic form of cardiac graft rejection that affects transplant recipients. It is characterized by a diffuse and insidious proliferation of the intima in the graft's coronary arteries, which can involve both epicardial vessels and the microvasculature. The PT will be added as a Broad term to this SMQ as this progressive form of coronary artery disease occurs in heart transplant recipients and is similar to the PT Heart transplant failure that is already included in the broad scope

Proposed PT	*Bile reflux gastropathy*	Approved as Requested	Proposed PT	
To SMQ	*Gastrointestinal nonspecific inflammation (SMQ)*		*Bile reflux gastropathy*	10092852
Term scope	*Broad*		To SMQ	
			Gastrointestinal nonspecific inflammation (SMQ)	20000138
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Bile reflux gastropathy to Gastrointestinal nonspecific inflammation (SMQ) as a Broad term is approved as requested. The etiology of bile reflux gastropathy consists on the retrograde flow of bile-containing duodenal contents into the stomach, leading to chemical injury of the gastric mucosa. This condition most commonly arises after surgical procedures that disrupt normal gastrointestinal anatomy, such as Billroth I or II gastrectomy, Roux-en-Y gastric bypass, or cholecystectomy. However, medication-related factors also play a notable role: drugs such as opioids, anticholinergics, and calcium channel blockers may impair gastric motility or reduce pyloric tone, thereby indirectly facilitating bile reflux. Since bile reflux gastropathy is about injury or damage of the mucosa rather than direct inflammation, this PT will be added to the broad scope of the SMQ.

MSSO Comment: The proposal to add PT Biliary candidiasis to Infectious biliary disorders (SMQ) as a Narrow term is approved as requested. Biliary candidiasis is a Candida fungal infection involving the bile ducts, gallbladder, or both. It’s rare and usually occurs in immunocompromised patients or those with biliary instrumentation (ERCP, stents, drains). Biliary candidiasis should be included in the narrow search because it represents a clearly defined infectious process of the biliary tract with a specific pathogen, which is highly specific of what this SMQ is intended to capture.

			Hepatic failure, fibrosis and cirrhosis and other liver damage-related conditions (SMQ)	20000013
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Intrahepatic lymphatic stasis to Hepatic failure, fibrosis and cirrhosis and other liver damage-related conditions (SMQ) as a Broad term is approved as requested. Intrahepatic lymphatic stasis can be both consequence and cause of hepatic cirrhosis and fibrosis. In cirrhosis and advanced fibrosis, the distortion of hepatic architecture and increased sinusoidal resistance impair lymph outflow, producing intrahepatic lymphatic stasis and explaining why cirrhotic livers generate huge amounts of lymph and ascites. Conversely, impaired lymphatic clearance itself can worsen the local microenvironment by increasing edema and retaining cytokines and matrix proteins, which favors stellate cell activation and fibrosis progression. This term should be added to the broad scope, since beyond cirrhosis and fibrosis, intrahepatic lymphatic stasis can occur in several other acute hepatic conditions (chronic hepatitis, hepatic malignancies, liver transplantation, Budd–Chiari syndrome, etc).

Detail Report

CR Number: 2025267070 **Implementation Date:** 26-Sep-25 Related CR: 2025267070

Proposed PT	*Autoimmune pleuritis*	Approved as Requested	Proposed PT	
To SMQ	*Immune-mediated/autoimmune disorders (SMQ)*		*Autoimmune pleuritis*	10092888
Term scope	*Narrow*		To SMQ	
			Immune-mediated/autoimmune disorders (SMQ)	20000236
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Autoimmune pleuritis to Immune-mediated/autoimmune disorders (SMQ) as a Narrow term is approved as requested. Autoimmune pleuritis is inflammation of the pleura caused by an autoimmune process which can occur as a manifestation of various autoimmune diseases. Terms referring to immune-mediated and autoimmune disorders are in the narrow scope of this SMQ.

CR Number: 2025267071 **Implementation Date:** 26-Sep-25 Related CR: 2025267071

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Transplant associated thrombotic microangiopathy*	Approved as Requested	Proposed PT	
To SMQ	*Acute renal failure (SMQ)*		*Transplant associated thrombotic microangiopathy*	10092857
Term scope	*Broad*		To SMQ	
			Acute renal failure (SMQ)	20000003
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Transplant associated thrombotic microangiopathy to Acute renal failure (SMQ) as a Broad term is approved as requested. The kidney is typically the primary site of microangiopathy, causing proteinuria, acute kidney injury, hypertension, development of chronic kidney disease, or end stage renal disease. PT Transplant associated thrombotic microangiopathy will be added in broad scope.

Detail Report

CR Number: 2025267072 **Implementation Date:** 26-Sep-25 Related CR: 2025267072

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Retinol binding protein abnormal*	Approved as Requested	Proposed PT	
To SMQ	*Acute renal failure (SMQ)*		*Retinol binding protein abnormal*	10092910
Term scope	*Broad*		To SMQ	
			Acute renal failure (SMQ)	20000003
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Retinol binding protein abnormal to Acute renal failure (SMQ) as a Broad term is approved as requested. Elevated urinary retinol binding protein is an early marker of proximal tubular injury (before serum creatinine rises) and predicts acute renal failure onset and severity better than traditional markers and will be added in Broad scope.

CR Number: 2025267073 **Implementation Date:** 26-Sep-25 Related CR: 2025267073

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Retinol binding protein abnormal*	Approved as Requested	Proposed PT	
To SMQ	*Chronic kidney disease (SMQ)*		*Retinol binding protein abnormal*	10092910

MSSO Comment: The proposal to add PT Perineal oedema to Pregnancy, labour and delivery complications and risk factors (excl abortions and stillbirth) (SMQ) as a Broad term is approved as requested. This term fits the inclusion criteria for this SMQ. Similar terms such as PT Perineal swelling and PT Perineal injury are already included as broad scope terms.

Detail Report

CR Number: 2025267080 **Implementation Date:** 26-Sep-25 Related CR: 2025267080

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Biliary candidiasis*	Approved as Requested	Proposed PT	
To SMQ	*Opportunistic infections (SMQ)*		*Biliary candidiasis*	10092986
Term scope	*Narrow*		To SMQ	
			Opportunistic infections (SMQ)	20000235
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Biliary candidiasis to Opportunistic infections (SMQ) as a Narrow term is approved as requested. Biliary candidiasis qualifies for narrow scope inclusion because Candida infection of the biliary tract is very rare in immunocompetent host. This infection reflects important immune compromise and fulfills the criterion of infection by a usual pathogen in an unusual and clinically severe location.

CR Number: 2025267081 **Implementation Date:** 26-Sep-25 Related CR: 2025267081

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome*	Approved as Requested	Proposed PT	
			Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome	10092834
To SMQ	*Opportunistic infections (SMQ)*

			Opportunistic infections (SMQ)	20000235
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Progressive multifocal leukoencephalopathy associated immune reconstitution inflammatory syndrome to Opportunistic infections (SMQ) as a Narrow term is approved as requested. PML-IRIS differs from classic PML mainly in the context of an added intense inflammatory reaction. Even if it appears after immune recovery (e.g., starting ART), it is still a prototypical opportunistic infection in relation to JC virus reactivation in severely immunosuppressed patients, and will be added to the narrow.

Detail Report

CR Number: 2025267082 **Implementation Date:** 26-Sep-25 Related CR: 2025267082

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Anti-JC virus antibody positive*	Approved as Requested	Proposed PT	
To SMQ	*Opportunistic infections (SMQ)*		*Anti-JC virus antibody positive*	10092894
Term scope	*Broad*		To SMQ	
			Opportunistic infections (SMQ)	20000235
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Anti-JC virus antibody positive to Opportunistic infections (SMQ) as a Broad term is approved as requested. Anti-JC virus antibody positivity, while not diagnostic of active infection, represents a relevant laboratory investigation linked to a classical opportunistic pathogen. JC virus seropositivity is clinically meaningful as it identifies individuals at risk of developing progressive multifocal leukoencephalopathy. However, this term will be added to the broad scope - even if the related PT JC virus CSF test positive is in the narrow - because, the blood antibody test is rather a risk marker, while the CSF test demonstrates the direct presence of the virus in the central nervous system in an active infection.

CR Number: 2025267083 **Implementation Date:** 26-Sep-25 Related CR: 2025267083

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Transplant associated thrombotic microangiopathy*	Approved as Requested	Proposed PT	
To SMQ	*Renovascular disorders (SMQ)*		*Transplant associated thrombotic microangiopathy*	10092857
Term scope	*Broad*		To SMQ	
			Renovascular disorders (SMQ)	20000181
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Transplant associated thrombotic microangiopathy to Renovascular disorders (SMQ) as a Broad term is approved as requested. Transplant-associated thrombotic microangiopathy is a reno-vascular disease because its central pathogenic event is endothelial injury in the renal microvasculature after transplantation. The microvascular obstruction reduces renal blood flow, causing ischemia, hypertension, proteinuria, and progressive kidney dysfunction. Although it may involve other organs, the kidney is particularly vulnerable due to its dense microvascular network, making the renal vasculature the primary target. The term will be added to the broad scope since thrombotic microangiopathies are explicitly excluded for the narrow.

Detail Report

CR Number: 2025267084 **Implementation Date:** 26-Sep-25 Related CR: 2025267084

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Acquired renal arteriovenous fistula*	Approved as Requested	Proposed PT	
To SMQ	*Renovascular disorders (SMQ)*		*Acquired renal arteriovenous fistula*	10092818

			Renovascular disorders (SMQ)	20000181
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Acquired renal arteriovenous fistula to Renovascular disorders (SMQ) as a Narrow term is approved as requested. Acquired renal arteriovenous fistula is a vascular abnormality of the kidney that results in an abnormal communication between the arterial and venous systems. It can arise from trauma, surgery, biopsy, or other renal interventions, and leads to hemodynamic consequences such as hypertension, hematuria, or high-output cardiac failure. The term fulfills the first inclusion criterium ("renal vascular and ischaemic conditions") an will be added to the narrow scope of this SMQ.

CR Number: 2025267085 **Implementation Date:** 26-Sep-25 Related CR: 2025267085

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Retinol binding protein abnormal*	Approved as Requested	Proposed PT	
To SMQ	*Liver related investigations, signs and symptoms (SMQ)*		*Retinol binding protein abnormal*	10092910
Term scope	*Broad*		To SMQ	
			Liver related investigations, signs and symptoms (SMQ)	20000008
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Retinol binding protein abnormal to Liver related investigations, signs and symptoms (SMQ) as a Broad term is approved as requested. Retinol binding protein (RBP) abnormal reflects a potentially liver-related laboratory test because RBP is synthesized in the liver and its alteration may indicate decreased synthetic capacity. However, it is not very specific for the liver and it is not part of the standard panels for liver evaluation nor of the usual diagnostic criteria for drug-induced liver injury, for which reason the term will be added to the broad scope.

Detail Report

CR Number: 2025267086 **Implementation Date:** 26-Sep-25 Related CR: 2025267086

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Aspergillus otitis externa*	Approved as Requested	Proposed PT	
To SMQ	*Opportunistic infections (SMQ)*		*Aspergillus otitis externa*	10092897

			Opportunistic infections (SMQ)	20000235
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Aspergillus otitis externa to Opportunistic infections (SMQ) as a Broad term is approved as requested. Though this otitis is usually localized and limited in the immunocompetent person, in the immunocompromised patients or in patients with local propensity factors (prolonged use of topical antibiotics, anatomical alterations, chronic humidity) it may behave as an opportunistic infection, with a higher risk of spread and complications.

CR Number: 2025267087 **Implementation Date:** 03-Oct-25 Related CR: 2025267087

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Splenic vein dilatation*	Approved as Requested	Proposed PT	
To SMQ	*Hepatic failure, fibrosis and cirrhosis and other liver damage-related conditions (SMQ)*		*Splenic vein dilatation*	10092898
Term scope	*Broad*		To SMQ	
			Hepatic failure, fibrosis and cirrhosis and other liver damage-related conditions (SMQ)	20000013
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Splenic vein dilatation to Hepatic failure, fibrosis and cirrhosis and other liver damage-related conditions (SMQ) as a Broad term is approved as requested. Splenic vein dilatation often reflects portal hypertension, a frequent consequence of hepatic cirrhosis and advanced liver disease. Its detection can be a useful imaging marker of clinically significant portal hypertension, which is an important complication of cirrhosis and end-stage liver damage. The term will be added to the broad scope, because dilatation of the splenic vein is not specific to hepatic disease and can occur with localized splenic vein obstruction (e.g., thrombosis due to pancreatitis, pancreatic neoplasms).

Detail Report

			Embolic and thrombotic events, vessel type unspecified and mixed arterial and venous (SMQ)	20000083
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Transplant associated thrombotic microangiopathy to Embolic and thrombotic events, vessel type unspecified and mixed arterial and venous (SMQ) as a Narrow term is approved as requested. Transplant associated thrombotic microangiopathy (TA-TMA) is a heterogeneous, fatal disorder seen within 100 days post-transplant due to treatment related endothelial damage and underlying disease. It presents with thrombocytopenia, hemolysis, acute renal failure, mental status changes and involvement of other organs as in other TMAs. In general, organ injury is caused by the release of inflammatory cytokines that activates platelets and coagulation factors leading to thrombosis and fibrin deposition. This term fits the inclusion criteria of this SMQ for embolism and thrombosis terms from HLGT Embolism and thrombosis. All terms are narrow scope.

Detail Report

CR Number: 2025267089 **Implementation Date:** 26-Sep-25 Related CR: 2025267089

			Interstitial lung disease (SMQ)	20000042
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Interstitial lung thickening to Interstitial lung disease (SMQ) as a Narrow term is approved as requested. This term fits the inclusion criteria for the narrow search for this SMQ for terms referring to lung diseases characterized by alveolitis, interstitial inflammation, and fibrosis. Interstitial thickening of the lung refers to the abnormal widening of the interstitial space, often seen as reticular or linear opacities on imaging, indicating fibrosis, inflammation, or fluid accumulation. Common causes include pulmonary fibrosis, congestive heart failure, infections, and interstitial lung diseases. Similar PT Interstitial lung abnormality is already included as a narrow scope term.

CR Number: 2025267094 **Implementation Date:** 13-Oct-25 Related CR: 2025267094

MSSO Comment: The proposal to add PT Inferior vena cava compression to Embolic and thrombotic events, venous (SMQ) as a Narrow term is approved as requested. Inferior vena cava (IVC) compression is the partial or complete obstruction of the IVC, typically caused by external pressure. This condition can result in impaired blood flow, potentially leading to venous stasis, thrombosis, or embolic events. Similar terms such as PT Inferior vena cava syndrome or PT Inferior vena caval occlusion are already included. All terms in this SMQ are narrow scope.

Detail Report

CR Number: 2025267098 **Implementation Date:** 26-Sep-25 Related CR: 2025267098

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Morison's pouch cyst*	Rejected		

MSSO Comment: The proposal to add a new term Morison's pouch cyst is not approved. A Morison's pouch cyst isn't a specific condition, but rather a descriptive expression for a fluid-filled sac that develops in Morison's pouch, a potential space between the liver and right kidney. Morison's pouch does not produce cysts of its own; if a "cyst" is mentioned in that location, it refers to an adjacent cystic-appearing lesion or collection occupying that anatomical space. MedDRA cannot add all possible imaging descriptions resulting from the combination of a given lesion and the anatomical space or region where it is found.

CR Number: 2025267099 **Implementation Date:** 02-Oct-25 Related CR: 2025267099

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Ovarian vein dilatation*	Approved as Requested	Proposed PT	
			Ovarian vein dilatation	10093091
			HLT primary	
			Ovarian and fallopian tube disorders NEC	10013342
			SOC primary	
			Reproductive system and breast disorders	10038604
			HLT secondary	
			Site specific vascular disorders NEC	10057188
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new term Ovarian vein dilatation is approved as requested. Ovarian vein dilatation refers to pathological enlargement of the ovarian vein, typically resulting from venous valve insufficiency or impaired outflow that leads to venous stasis. It is most commonly associated with pelvic congestion syndrome but may also present as an incidental radiologic finding without clinical symptoms. Ovarian vein dilatation will be added as PT to primary HLT Ovarian and fallopian tube disorders NEC and secondary HLT Site specific vascular disorders NEC.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*High voltage QRS*	Rejected		
To PT	*Electrocardiogram QRS complex abnormal*			

MSSO Comment: The proposal to add a new LLT High voltage QRS to PT Electrocardiogram QRS complex abnormal is not approved. The concept exists in LLT QRS voltage increased (PT Electrocardiogram QRS complex abnormal).

CR Number: 2025269000 **Implementation Date:** 02-Oct-25 Related CR: 2025269000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Adrenal space-occupying lesion*	Rejected		

MSSO Comment: The proposal to add a new term Adrenal space-occupying lesion is not approved. The proposed term Adrenal space-occupying lesion is a general non-specific term that covers a broad spectrum of adrenal lesions from benign to neoplastic entities. The MSSO refrains from adding new lesion terms when the word “lesion” is not part of the wording of a medical precise diagnosis (e.g., PT Glomerulonephritis minimal lesion). Please reference section 5.1 of the MedDRA Introductory Guide under the topic of lesion.

CR Number: 2025270000 **Implementation Date:** 02-Oct-25 Related CR: 2025270000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pulmonary artery filling defect*	Approved as Requested	Proposed PT	
			Pulmonary artery filling defect	10093092
			HLT primary	
			Pulmonary thrombotic and embolic conditions	10037439
			SOC primary	
			Respiratory, thoracic and mediastinal disorders	10038738
			HLT secondary	
			Pulmonary embolism and thrombosis	10037379
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new term Pulmonary artery filling defect is approved as requested. The most common cause of pulmonary artery filling defects on computed tomography pulmonary angiography or magnetic resonance imaging is pulmonary thromboembolism. However, several other embolic and non-embolic etiologies need to be considered. Pulmonary artery filling defect will be added as PT to primary HLT Pulmonary thrombotic and embolic conditions and secondary HLT Pulmonary embolism and thrombosis.

Proposed LLT	*Symptomatic cerebral haemorrhage*	Approved as Requested	Proposed LLT		
To PT	*Cerebral haemorrhage*		*Symptomatic cerebral haemorrhage*	10093096	Current
			To PT		
			Cerebral haemorrhage	10008111	

MSSO Comment: The proposal to add a new LLT Symptomatic cerebral haemorrhage to PT Cerebral haemorrhage is approved as requested. A symptomatic cerebral hemorrhage is bleeding within the brain that causes noticeable neurological symptoms, such as sudden headache, weakness, speech difficulties, or loss of consciousness. It typically results from conditions like high blood pressure, trauma, or vascular abnormalities and requires urgent medical attention. In a related change, the American spelled counterpart will be added as LLT Symptomatic cerebral hemorrhage to PT Cerebral haemorrhage.

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Geographic atrophy*	Rejected		
From PT	*Dry age-related macular degeneration*			

MSSO Comment: The proposal to promote the LLT Geographic atrophy from PT Dry age-related macular degeneration is not approved. To avoid the overpopulation on PT level, Dry age-related macular degeneration and its closely related sub-concepts Geographic atrophy will remain in their current subordination. The distinction between dry age-related macular degeneration (AMD) and neovascular AMD becomes relevant only in late AMD, as patients usually do not have neovascularization at early and intermediate stages. Therefore, PT Dry age-related macular degeneration represents the dry as opposed to the wet form of advanced AMD. Early and intermediate forms are available as LLTs to PT Age-related macular degeneration.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Acquired aplasia*	Rejected		
To PT	*Bone marrow failure*			

MSSO Comment: The proposal to add a new LLT Acquired aplasia to PT Bone marrow failure is not approved. Aplasia is a very broad and general term and was made non-current for this reason. Congenital aplasia, although also broad refers to the absence or failure of development of a tissue, organ, or body part from birth. Acquired aplasia develops later in life due to various factors such as disease, trauma, or other environmental influences. It remains an ambiguous term as it can refer to bone marrow aplasia, but also to e.g. thymus aplasia or ovarian/testicular aplasia. Please consider internal conventions and medical judgement in cases where appropriate follow-up information cannot be obtained.

CR Number: 2025274000 **Implementation Date:** 07-Oct-25 Related CR: 2025274000

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Eyelid ecchymosis*	Rejected		
From PT	*Eyelid bleeding*			
To PT	*Eyelid contusion*			

MSSO Comment: The proposal to move the LLT Eyelid ecchymosis from PT Eyelid bleeding to PT Eyelid contusion is not approved. Ecchymosis is a visible discoloration caused by blood extravasation into the skin or mucous membranes, often without direct blunt trauma to the site. Contusion, by contrast, specifically denotes a traumatic injury caused by blunt trauma leading to tissue damage and subsequent bleeding under the skin. While contusions often produce ecchymosis, the reverse is not always true. Ecchymosis may arise from systemic conditions such as coagulopathies or thrombocytopenia, or from remote trauma, and therefore cannot be equated with contusion. For this reason, ecchymosis terms, including Eyelid ecchymosis, will remain aligned with hemorrhage/bleeding terms and not be relocated under contusion.

			Aseptic process simulation issue	10093104

MSSO Comment: The proposal to add a new LLT Media fill issue to PT Aseptic process simulation issue is approved as requested. In pharmaceutical manufacturing, a media fill issue is a problem or deviation identified during an aseptic process simulation (media fill), such as contamination, operator error, or process failure, which indicates a potential risk to sterility assurance in actual drug production.

Detail Report

CR Number: 2025274018 **Implementation Date:** 16-Oct-25 Related CR: 2025274018

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Computerized system validation issue*	Approved Not as Requested After Suspension	Proposed LLT		
To PT	*Validation issue*		*Computerized system validation issue*	10093169	Current
			To PT		
			Manufacturing validation issue	10093165	

MSSO Comment: The proposal to add a new LLT Computerized system validation issue to PT Validation issue is approved but not as requested after suspension. Computerized system validation issues are problems or deficiencies in proving and documenting that digital systems consistently perform as intended, which can disrupt operations and jeopardize regulatory compliance. Computerized system validation issue will be added as an LLT to the new PT Manufacturing validation issue, added in change request 2025274024.

CR Number: 2025274019 **Implementation Date:** 16-Oct-25 Related CR: 2025274019

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Equipment qualification issues*	Approved Not as Requested After Suspension	Proposed LLT		
To PT	*Qualification issue*		*Equipment qualification issue*	10093168	Current
			To PT		
			Manufacturing qualification issue	10093164	

MSSO Comment: The proposal to add a new LLT Equipment qualification issues to PT Qualification issue is approved but not as requested after suspension. Equipment qualification issues are problems or gaps in verifying and documenting that machinery operates as intended, potentially delaying production and risking regulatory noncompliance. The proposed term will be added in the singular form as LLT Equipment qualification issue to new PT Manufacturing qualification issue added in change request 2025274025.

CR Number: 2025274020 **Implementation Date:** 06-Oct-25 Related CR: 2025274020

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Incorrect component used in manufacturing*	Approved as Requested	Proposed LLT		
To PT	*Manufacturing materials issue*		*Incorrect component used in manufacturing*	10093112	Current
			To PT		
			Manufacturing materials issue	10077798	

MSSO Comment: The proposal to add a new LLT Incorrect component used in manufacturing to PT Manufacturing materials issue is approved as requested. In pharmaceutical manufacturing, “incorrect component used” refers to the use of the wrong raw material, ingredient, or part (such as an active pharmaceutical ingredient, excipient, or packaging component) in the production process, which can compromise product quality, patient safety, and regulatory compliance.

Detail Report

CR Number: 2025274021 **Implementation Date:** 07-Oct-25 Related CR: 2025274021

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Manufacturing equipment filter issue*	Approved as Requested	Proposed LLT	
From PT	*Manufacturing equipment issue*		*Manufacturing equipment filter issue*	10078635
HLT primary	*Manufacturing facilities and equipment issues*		From PT	
			Manufacturing equipment issue	10077795
			HLT primary	
			Manufacturing facilities and equipment issues	10077539
			SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to promote the LLT Manufacturing equipment filter issue from PT Manufacturing equipment issue to primary HLT Manufacturing facilities and equipment issues in SOC Product issues is approved as requested. Filters are an important part of manufacturing equipment and thus issues related to filters are important to be available on PT level.

CR Number: 2025274022 **Implementation Date:** 07-Oct-25 Related CR: 2025274022

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #

Computerised system validation issue will be added as the British English spelled counterpart LLT (American English spelled LLT added in change request 2025274018) to the new PT Manufacturing validation issue, added in change request 2025274024.

Detail Report

CR Number: 2025275000 **Implementation Date:** 07-Oct-25 Related CR: 2025275000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Benign neoplasm progression*	Approved as Requested	Proposed PT	
HLT primary	*Neoplasms benign site unspecified NEC*		*Benign neoplasm progression*	10093100
SOC primary	*Neoplasms benign, malignant and unspecified (incl cysts and polyps)*		HLT primary	
			Neoplasms benign site unspecified NEC	10029106
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104

MSSO Comment: The proposal to add a new PT Benign neoplasm progression to primary HLT Neoplasms benign site unspecified NEC in SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps) is approved as requested. In MedDRA, the progression of a disorder is usually considered to be a sub-concept of the respective medical condition, because progression is a potential characteristic of the natural history of most disorders. However, benign neoplasm progression may be a significant clinical event that warrants representation at the PT level especially in certain organs or locations.

CR Number: 2025279000 **Implementation Date:** 13-Oct-25 Related CR: 2025279000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Duffy null phenotype neutropenia*	Approved Not as Requested	Proposed PT	
			Benign ethnic neutropenia	10074832
			To HLT	
			Haematological disorders congenital NEC	10018848

MSSO Comment: The proposal to add a new term Duffy null phenotype neutropenia is approved but not as requested. Duffy-null–associated neutropenia (also known as benign ethnic neutropenia) is a benign, genetically determined condition characterized by chronically low neutrophil counts, most often observed in individuals of African, Middle Eastern, or West Indian ancestry. It results from homozygosity for the Duffy-null (ACKR1) polymorphism, which alters neutrophil regulation without impairing immune function. Despite lower absolute neutrophil counts, affected individuals remain clinically healthy and do not have an increased risk of infection. The proposed concept exists in PT Benign ethnic neutropenia, and the proposed term will not be added. However, in a related change, PT Benign ethnic neutropenia will be linked to HLT Haematological disorders congenital NEC and furthermore, the primary SOC for PT Benign ethnic neutropenia will be changed from SOC Blood and lymphatic system disorders to SOC Congenital, familial and genetic disorders. The current primary HLT Neutropenias will remain as secondary HLT for PT Benign ethnic neutropenia. Furthermore, to accommodate the genetic basis of the neutropenia, LLT Duffy null polymorphism will be added to a new PT ACKR1 gene polymorphism which will be added to HLT Genetic polymorphisms.

CR Number: 2025280000 **Implementation Date:** 13-Oct-25 Related CR: 2025280000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Hypertensive oedema*	Rejected		

MSSO Comment: The proposal to add a new term Hypertensive oedema is not approved. Although MedDRA still contains some legacy terms based on etiological relationships, current practice discourages further additions, since the number of potential combinations resulting from linking a manifestation to its many possible etiologies is virtually endless. As well, hypertension itself does not cause edema; edema in a hypertensive patient is usually due to an underlying condition (e.g., heart failure, renal impairment, or certain medications). The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance.

CR Number: 2025280001 **Implementation Date:** 13-Oct-25 Related CR: 2025280001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Maternal exposure during pregnancy, first, second and third trimesters*	Rejected		

MSSO Comment: The proposal to add a new term Maternal exposure during pregnancy, first, second and third trimesters is not approved. The proposed concept is already encompassed by the more general term Maternal exposure during pregnancy, since this broader term covers the entire pregnancy period unless a specific trimester is indicated. When it is known that the exposure was through all trimesters, consider using existing specific terms in combination, e.g. LLT Maternal exposure during pregnancy, first trimester, LLT Maternal exposure during pregnancy, second trimester, and LLT Maternal exposure during pregnancy, third trimester for this scenario depending on your conventions.

CR Number: 2025280002 **Implementation Date:** 13-Oct-25 Related CR: 2025280002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Maternal exposure during pregnancy, first and second trimesters*	Rejected		

MSSO Comment: The proposal to add a new term Maternal exposure during pregnancy, first and second trimesters is not approved. The proposed term represents a combination of the two existing LLT Maternal exposure during pregnancy, first trimester and LLT Maternal exposure during pregnancy, second trimester. Since these existing terms can be used in combination to accurately describe the same situation, the addition of this new proposed combined term is unnecessary.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Maternal exposure during pregnancy, second and third trimesters*	Rejected		

MSSO Comment: The proposal to add a new term Maternal exposure during pregnancy, second and third trimesters is not approved. The proposed term represents a combination of the two existing LLT Maternal exposure during pregnancy, second trimester and LLT Maternal exposure during pregnancy, third trimester. Since these existing terms can be used in combination to accurately describe the same situation, the addition of this new proposed combined term is unnecessary.

CR Number: 2025280005 **Implementation Date:** 15-Oct-25 Related CR: 2025280005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Neuroendocrine tumor of the ampulla of vater*	Approved Not as Requested	Proposed LLT		
			Neuroendocrine tumor of the ampulla of Vater	10093130	Current
			To PT		
			Gastroenteropancreatic neuroendocrine tumour disease	10077559	

MSSO Comment: The proposal to add a new term Neuroendocrine tumor of the ampulla of vater is approved but not as requested. Neuroendocrine tumors of the ampulla of Vater are extremely rare and its diagnosis is challenging. Systemic evaluation and a very high index of suspicion are required for diagnosis. Proposed term will be modified for MedDRA capitalization conventions and added as LLT Neuroendocrine tumor of the ampulla of Vater to PT Gastroenteropancreatic neuroendocrine tumour disease. In a related change, the British English spelled counterpart LLT Neuroendocrine tumour of the ampulla of Vater will also be added to PT Gastroenteropancreatic neuroendocrine tumour disease.

CR Number: 2025280007 **Implementation Date:** 13-Oct-25 Related CR: 2025280007

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Polymicrobial sepsis*	Approved Not as Requested	Proposed PT	
			Polymicrobial sepsis	10093125
			HLT primary	
			Sepsis, bacteraemia, viraemia and fungaemia NEC	10040054
			SOC primary	
			Infections and infestations	10021881

MSSO Comment: The proposal to add a new LLT Polymicrobial sepsis is approved but not as requested. Polymicrobial sepsis will often be associated with polymicrobial bacteraemia. Polymicrobial sepsis is a life-threatening condition where the body's response to an infection involving two or more different pathogens causes organ dysfunction and damage. Polymicrobial sepsis will be added as a PT to HLT Sepsis, bacteraemia, viraemia and fungaemia NEC.

CR Number: 2025281000 **Implementation Date:** 15-Oct-25 Related CR: 2025281000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Mobility difficulty*	Approved Not as Requested	Proposed LLT	
			Mobility impaired	10093132 Current
			To PT	
			Mobility decreased	10048334

MSSO Comment: The proposal to add a new LLT Mobility difficulty is approved but not as requested. Difficulty in mobility usually conveys that mobility is impaired. As such, and for better alignment, the proposed term will be modified and added as LLT Mobility impaired to PT Mobility decreased.

CR Number: 2025281001 **Implementation Date:** 08-Dec-25 Related CR: 2025281001

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Developmental and epileptic encephalopathy*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Developmental and epileptic encephalopathy is not approved after suspension. The proposed term is a broad grouping term and has been proposed as HLGT in change request 2025290000 and will be considered as a complex change for version 30.0.

Detail Report

CR Number: 2025281002 **Implementation Date:** 08-Dec-25 Related CR: 2025281002

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Early infantile epileptic encephalopathy*	Approved Not as Requested After Suspension	Proposed LLT		
			Early infantile epileptic encephalopathy	10093396	Current
			To PT		
			Early infantile developmental and epileptic encephalopathy	10093383	

MSSO Comment: The proposal to add a new PT Early infantile epileptic encephalopathy is approved but not as requested after suspension. Early infantile epileptic encephalopathy syndrome is characterized by frequent drug-resistant seizures that begin ≤3 months of age, with abnormal interictal EEG and neurological examination. Most cases are due to genetic or structural brain abnormalities present from conception or early brain development. Early infantile epileptic encephalopathy will be added as LLT to a new PT Early infantile developmental and epileptic encephalopathy added in change request 2025290005.

CR Number: 2025281003 **Implementation Date:** 08-Dec-25 Related CR: 2025281003

			Eyelid myoclonus with absence	10093397	Current
			To PT		
			Jeavons syndrome	10084303	

MSSO Comment: The proposal to add a new PT Eyelid myoclonus with absence is approved but not as requested after suspension. Eyelid myoclonus with absence is a rare form of generalized epilepsy that can have several possible seizure types. It is also known as Jeavons syndrome. Eyelid myoclonus with absence will be added as a synonym LLT to PT Jeavons syndrome.

CR Number: 2025281006 **Implementation Date:** 08-Dec-25 Related CR: 2025281006

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Eyelid myoclonus without absence*	Approved Not as Requested After Suspension	Proposed LLT		
			Eyelid myoclonus without absence	10093394	Current
			To PT		
			Jeavons syndrome	10084303	

MSSO Comment: The proposal to add a new PT Eyelid myoclonus without absence is approved but not as requested after suspension. Eyelid myoclonus without absence is a rare form of generalized epilepsy that can have several possible seizure types. It is also known as Jeavons syndrome. Eyelid myoclonus without absence will be added as a synonym LLT to PT Jeavons syndrome.

CR Number: 2025281007 **Implementation Date:** 08-Dec-25 Related CR: 2025281007

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Myoclonic tonic clonic seizure*	Approved After Suspension	Proposed PT	
			Myoclonic tonic clonic seizure	10093389
			HLT primary	
			Generalised tonic-clonic seizures	10018101
			SOC primary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Myoclonic tonic clonic seizure is approved as requested after suspension. A myoclonic–tonic–clonic seizure is a generalized seizure that begins with myoclonic jerks (brief, shock-like muscle contractions), followed immediately by a tonic phase with sustained muscle stiffening, and then a clonic phase with rhythmic jerking. It reflects a sequential activation of generalized myoclonic, tonic, and clonic motor patterns within a single seizure event. Myoclonic tonic clonic seizure will be added as a PT to HLT Generalised tonic-clonic seizures.

Detail Report

CR Number: 2025281008 **Implementation Date:** 08-Dec-25 Related CR: 2025281008

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Absence to tonic clonic seizure*	Approved After Suspension	Proposed PT	
			Absence to tonic clonic seizure	10093390
			HLT primary	
			Generalised tonic-clonic seizures	10018101
			SOC primary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Absence to tonic clonic seizure is approved as requested after suspension. An absence-to-tonic-clonic seizure is a generalized seizure that starts with a typical absence (brief impaired awareness with staring) and then evolves directly into a generalized tonic-clonic seizure. The absence phase is short and functions as the initial ictal onset, after which tonic stiffening and clonic jerking appear as part of the same continuous seizure event. Absence to tonic clonic seizure will be added as a PT to HLT Generalised tonic-clonic seizures.

CR Number: 2025281009 **Implementation Date:** 08-Dec-25 Related CR: 2025281009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Bilateral tonic clonic seizure*	Approved After Suspension	Proposed PT	
			Bilateral tonic clonic seizure	10093387
			HLT primary	
			Generalised tonic-clonic seizures	10018101
			SOC primary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Bilateral tonic clonic seizure is approved as requested after suspension. Bilateral tonic-clonic seizure is a type of seizure that involves both hemispheres. Bilateral tonic clonic seizure will be added as a PT to HLT Generalised tonic-clonic seizures.

CR Number: 2025281010 **Implementation Date:** 08-Dec-25 Related CR: 2025281010

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Focal preserved consciousness seizure*	Approved Not as Requested After Suspension	Proposed LLT		
			Focal preserved consciousness seizure	10093392	Current
			To PT		
			Simple partial seizures	10040703	

MSSO Comment: The proposal to add a new PT Focal preserved consciousness seizure is approved but not as requested after suspension. A focal preserved consciousness seizure is limited to one hemisphere of the brain and does not cause impairment of consciousness. Focal preserved consciousness seizure will be added as an LLT to PT Simple partial seizures, aligned with existing LLT Focal onset aware seizure.

CR Number: 2025281011 **Implementation Date:** 08-Dec-25 Related CR: 2025281011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Focal impaired consciousness seizure*	Approved Not as Requested After Suspension	Proposed LLT		
			Focal impaired consciousness seizure	10093393	Current
			To PT		
			Focal dyscognitive seizures	10079424	

MSSO Comment: The proposal to add a new PT Focal impaired consciousness seizure is approved but not as requested after suspension. A focal seizure with impaired consciousness is when a patient's awareness is impaired for any portion of the seizure. Focal impaired consciousness seizure will be added as an LLT to PT Focal dyscognitive seizures, aligned with existing LLT Focal onset impaired awareness seizure.

CR Number: 2025281012 **Implementation Date:** 08-Dec-25 Related CR: 2025281012

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Unknown bilateral tonic-clonic seizure*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Unknown bilateral tonic-clonic seizure is not approved after suspension. Generally, MedDRA does not add "unknown" qualifiers in term names and when diagnoses are uncertain, the condition is coded and addressed as a provisional diagnosis until confirmation is obtained. The MedDRA Term Selection Points to Consider document Section 3.1 provides guidance on how to select terms for provisional diagnoses.

CR Number: 2025281013 **Implementation Date:** 08-Dec-25 Related CR: 2025281013

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Unknown focal preserved consciousness seizure*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Unknown focal preserved consciousness seizure is not approved after suspension. Generally, MedDRA does not add "unknown" qualifiers in term names and when diagnoses are uncertain, the condition is coded and addressed as a provisional diagnosis until confirmation is obtained. The MedDRA Term Selection Points to Consider document Section 3.1 provides guidance on how to select terms for provisional diagnoses.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Ictal paresis*	Approved After Suspension	Proposed PT	
			Ictal paresis	10093388
			HLT primary	
			Seizures and seizure disorders NEC	10039912
			SOC primary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new PT Ictal paresis is approved as requested after suspension. Ictal paresis is a rare phenomenon. It is characterized by weakness or paralysis of a part of the body. Ictal paresis must be differentiated from ictal akinesia and ictal immobile limb in patients with temporal lobe epilepsy. Ictal paresis is almost always contralateral to the seizure onset zone and is likely to be produced by seizures that occur in close vicinity to the primary motor cortex. Ictal paresis will be added as PT to primary HLT Seizures and seizure disorders NEC.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Infantile epileptic spasm syndrome*	Approved After Suspension	Proposed LLT		
To PT	*Infantile spasms*		*Infantile epileptic spasm syndrome*	10093395	Current
			To PT		
			Infantile spasms	10021750	

MSSO Comment: The proposal to add a new LLT Infantile epileptic spasm syndrome to PT Infantile spasms is approved as requested after suspension. Infantile spasms is a seizure disorder that was first described by William West in 1841 and has been referred to as West syndrome. The spasms present with characteristic EEG changes known as hypsarrhythmia and a strong association with developmental delay or regression. The disorder has recently been reclassified into infantile epileptic spasms syndrome to include those patients who do not meet the full West syndrome criteria.

Detail Report

CR Number: 2025281017 **Implementation Date:** 08-Dec-25 Related CR: 2025281017

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Generalized epileptic spasms*	Approved Not as Requested After Suspension	Proposed LLT		
			Generalized epileptic spasms	10093391	Current
			To PT		
			Infantile spasms	10021750	

MSSO Comment: The proposal to add a new PT Generalized epileptic spasms is approved but not as requested after suspension. Generalized epileptic spasms are a type of seizure characterized by brief, sudden, involuntary muscle contractions that involve the whole body or both sides of the body simultaneously. Generalized epileptic spasms are often associated with infantile epileptic spasms syndrome. Generalized epileptic spasms will be added as an LLT to PT Infantile spasms. In a related change, the British English spelled counterpart will be added as LLT Generalised epileptic spasms to PT Infantile spasms.

CR Number: 2025342006 **Implementation Date:** 08-Dec-25 Related CR: 2025281017

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Generalised epileptic spasms*	Approved as Requested	Proposed LLT

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Neck infection*	Rejected		

MSSO Comment: The proposal to add a new term Neck infection is not approved. The proposed term represents only a broad regional placeholder without diagnostic precision, and encompasses multiple potential sources (dental, oropharyngeal, upper aerodigestive) and lacks clear pathological or microbiological definition.

CR Number: 2025282000 **Implementation Date:** 16-Oct-25 Related CR: 2025282000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Herpes simplex buttockalis*	Approved Not as Requested	Proposed PT	
			Gluteal herpes simplex infection	10093134
			HLT primary	
			Herpes viral infections	10019972
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Skin and subcutaneous tissue viral infections	10040797
			SOC secondary	
			Skin and subcutaneous tissue disorders	10040785

MSSO Comment: The proposal to add a new term Herpes simplex buttockalis is approved but not as requested. Gluteal herpes simplex infection refers to an extragenital manifestation of herpes simplex, usually resulting from reactivation of latent virus in the sacral nerve ganglia. The proposed term will be modified to represent the most frequent expression of this infection in medical literature and will be added as PT Gluteal herpes simplex infection with a primary link to HLT Herpes viral infections and a secondary link to HLT Skin and subcutaneous tissue viral infections.

CR Number: 2025282001 **Implementation Date:** 16-Oct-25 Related CR: 2025282001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Induced atopic dermatitis*	Rejected		

MSSO Comment: The proposal to add a new LLT Induced atopic dermatitis is not approved. Induced atopic dermatitis is usually clinically described as eczema flares caused by external factors like stress, irritants, and allergens, which trigger an immune response in genetically susceptible individuals. The proposed concept is represented by existing LLT Atopic dermatitis flare under PT Dermatitis atopic.

			Device optical issue	10069863	

MSSO Comment: The proposal to add a new LLT Device optical distortion to PT Device optical issue is approved as requested. Device optical distortion represents a problem associated with an optical defect in an image-forming system whereby the image is not the shape of an ideal image of the object.

CR Number: 2025285007 **Implementation Date:** 16-Oct-25 Related CR: 2025285007

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device light transmission obstruction*	Approved as Requested	Proposed LLT		
To PT	*Device optical issue*		*Device light transmission obstruction*	10093145	Current
			To PT		
			Device optical issue	10069863	

MSSO Comment: The proposal to add a new LLT Device light transmission obstruction to PT Device optical issue is approved as requested. Device light transmission obstruction represents a problem associated with the blocking of optical devices, e.g. visual pathways.

Detail Report

CR Number: 2025285008 **Implementation Date:** 16-Oct-25 Related CR: 2025285008

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device power source failure to discharge*	Approved Not as Requested	Proposed LLT		
To PT	*Device power source issue*		*Discharge failure of device power source*	10093158	Current
			To PT		
			Device power source issue	10069865	

MSSO Comment: The proposal to add a new LLT Device power source failure to discharge to PT Device power source issue is approved but not as requested. Discharge failure of device power source represents a problem associated with the failure of a battery or other charge storage device to appropriately discharge as intended. The proposed concept will be modified for clarity and added as LLT Discharge failure of device power source to PT Device power source issue.

CR Number: 2025285009 **Implementation Date:** 16-Oct-25 Related CR: 2025285009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Device electromagnetic compatibility issue*	Approved as Requested	Proposed PT	
HLT primary	*Device incompatibility issues*		*Device electromagnetic compatibility issue*	10093141
SOC primary	*Product issues*		HLT primary	
			Device incompatibility issues	10069792
			SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to add a new PT Device electromagnetic compatibility issue to primary HLT Device incompatibility issues in SOC Product issues is approved as requested. Device electromagnetic compatibility issue represents a problem associated with the ability of a system to function in its electromagnetic environment without introducing intolerable disturbances to anything in its environment.

CR Number: 2025285010 **Implementation Date:** 16-Oct-25 Related CR: 2025285010

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device audible prompt issue*	Approved as Requested	Proposed LLT		
To PT	*Device information output issue*		*Device audible prompt issue*	10093157	Current
			To PT		
			Device information output issue	10069842	

MSSO Comment: The proposal to add a new LLT Device audible prompt issue to PT Device information output issue is approved as requested. Device audible prompt issue represents a problem with any deviation from the documented specifications of the device that relate to audible feedback. e.g. voice prompts or beeps, but not safety related alarms.

			To PT		
			Device information output issue	10069842	

MSSO Comment: The proposal to add a new LLT Device tactile prompt issue to PT Device information output issue is approved as requested. Device tactile prompt issue represents a problem with any deviation from the documented specifications of the device that relate to tactile feedback, e.g. device vibrational prompt.

CR Number: 2025285012 **Implementation Date:** 16-Oct-25 Related CR: 2025285012

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Device output issue*	Approved as Requested	Proposed LLT	
From PT	*Device issue*		*Device output issue*	10092653
HLT primary	*Device issues NEC*		From PT	
			Device issue	10069868
			HLT primary	
			Device issues NEC	10069794
			SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to promote the LLT Device output issue from PT Device issue to primary HLT Device issues NEC in SOC Product issues is approved as requested. Device output issue is a unique concept that encompasses different types of expected device output (such as energy output, radiation output, gas output) representing deviation from the documented specifications of the device. As such, Device output issue will be represented at PT level.

CR Number: 2025285013 **Implementation Date:** 16-Oct-25 Related CR: 2025285013

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #

To PT	*Product contamination*		*Device contamination issue during reprocessing*	10093153	Current
			To PT		
			Product contamination	10069173	

MSSO Comment: The proposal to add a new LLT Device contamination issue during reprocessing to PT Product contamination is approved as requested. Device contamination issue during reprocessing represents a problem associated with a failure during any step of the reprocessing process (cleaning, disinfection, packaging, labeling, sterilization) of a used or opened but unused device.

Detail Report

CR Number: 2025286000 **Implementation Date:** 28-Oct-25 Related CR: 2025286000

Change Requested	Link (move) a PT to another HLT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Retinal disorder*	Rejected After Suspension		
From HLT	*Ocular disorders NEC*			
To HLT	*Retinopathies NEC*			

MSSO Comment: The proposal to move the PT Retinal disorder from HLT Ocular disorders NEC to HLT Retinopathies NEC is not approved after suspension. While the term retinopathy represents a specific subset of retinal damage most often involving systemic, metabolic or vascular damage of the retina, the concept of "retinal disorder" encompasses a far broader range of conditions, which includes degenerative, inflammatory, infectious, hereditary, traumatic, neoplastic, and structural abnormalities and thus better represented by the broader HLT Ocular disorders NEC.

CR Number: 2025286005 **Implementation Date:** 16-Oct-25 Related CR: 2025286005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Dysmorphic haematuria*	Approved Not as Requested	Proposed PT	
			Dysmorphic urinary red blood cells	10093138
			HLT primary	
			Urinalysis NEC	10046512
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term Dysmorphic haematuria is approved but not as requested. Dysmorphic haematuria refers to the presence of misshapen red blood cells in urine, which is a sign of a potential pathology in glomeruli. These cells have altered shapes, such as acanthocytes or stomatocytes, and their presence, especially along with red blood cell casts and proteinuria, suggests glomerular disease. The proposed term will be modified to represent the most commonly referenced form and added as PT Dysmorphic urinary red blood cells to HLT Urinalysis NEC.

CR Number: 2025287000 **Implementation Date:** 21-Oct-25 Related CR: 2025287000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Histotripsy*	Approved Not as Requested	Proposed PT	
To PT	*High intensity focused ultrasound*		*Histotripsy*	10093171
			HLT primary	
			Therapeutic procedures NEC	10027700
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new LLT Histotripsy to PT High intensity focused ultrasound is approved but not as requested. Histotripsy is the first noninvasive, non-ionizing, and non-thermal ablation technology guided by real-time imaging. Using focused ultrasound delivered from outside the body, histotripsy mechanically destroys tissue through cavitation, rendering the target into acellular debris. Histotripsy will be added as a PT to HLT Therapeutic procedures NEC.

CR Number: 2025287001 **Implementation Date:** 21-Oct-25 Related CR: 2025287001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Symptomatic ARIA-microhaemorrhages*	Approved as Requested	Proposed LLT		
To PT	*Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits*		*Symptomatic ARIA-microhaemorrhages*	10093173	Current
			To PT		
			Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits	10072601	

MSSO Comment: The proposal to add a new LLT Symptomatic ARIA-microhaemorrhages to PT Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits is approved as requested. While ARIA-microhemorrhages are generally asymptomatic, when they are symptomatic, a person may experience symptoms like headache, confusion, nausea, or dizziness. The distinction aids in guiding treatment decisions, monitoring, and safety assessment in clinical trials and practice. As well, the proposed term will be added to provide a coding option for a finding of symptomatic amyloid-related imaging abnormalities with microhaemorrhages. In a related change, the American English spelled counterpart LLT Symptomatic ARIA-microhemorrhages will also be added to PT Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits.

			To PT		
			Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits	10072601	

MSSO Comment: The proposal to add a new LLT Asymptomatic ARIA-microhaemorrhages to PT Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits is approved as requested. Asymptomatic ARIA-microhaemorrhages refers to amyloid-related imaging abnormalities with microhaemorrhages that occur without any accompanying clinical symptoms. The distinction aids in guiding treatment decisions, monitoring, and safety assessment in clinical trials and practice. As well, the proposed term will be added to provide a coding option for a finding of asymptomatic amyloid-related imaging abnormalities with microhaemorrhages. In a related change, the American English spelled counterpart LLT Asymptomatic ARIA-microhemorrhages will also be added to PT Amyloid related imaging abnormality-microhaemorrhages and haemosiderin deposits.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Superficial scleritis*	Rejected		

MSSO Comment: The proposal to add a new term Superficial scleritis is not approved. The proposed concept is not a standard description in medical literature. It is often a colloquial or clinically imprecise way to refer to episcleritis, which exists as LLT/PT Episcleritis.

Detail Report

CR Number: 2025290000 **Implementation Date:** 21-Nov-25 Related CR: 2025290000

Change Requested	Add a New HLGT	Final Disposition	Final Placement	MedDRA Code #
Proposed HLGT	*Developmental and epileptic encephalopathies*	Suspended		
To SOC	*Congenital, familial and genetic disorders*			

MSSO Comment: The proposal to add a new HLGT Developmental and epileptic encephalopathies to SOC Congenital, familial and genetic disorders is suspended. This is a 'Complex Change' to MedDRA since it affects one of the higher levels of the hierarchy. Complex Changes are only made in the X.0 release of MedDRA in March each year. As per MSSO policy for review and user consultation on all proposed Complex Changes, additional time is needed to consider this proposed change. You will be notified once a decision has been made on the disposition of your request. The proposed term will be processed as a complex change in MedDRA version 30.0 as it was submitted after the deadline for complex changes for version 29.0. The procedure for complex changes may sometimes involve user community input.

CR Number: 2025290001 **Implementation Date:** 08-Dec-25 Related CR: 2025290001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Gelastic seizures with hypothalamic hamartoma*	Rejected After Suspension		
To PT	*Gelastic seizure*			

MSSO Comment: The proposal to add a new LLT Gelastic seizures with hypothalamic hamartoma to PT Gelastic seizure is not approved after suspension. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. The proposed term maybe represented by existing LLT/PT Gelastic seizure and LLT/PT Hypothalamic hamartoma.

CR Number: 2025290002 **Implementation Date:** 21-Nov-25 Related CR: 2025290002

Proposed PT	*Infantile epileptic spasms syndrome*	Rejected After Suspension		
HLT primary	*Neonate/infant onset developmental and epileptic encephalopathy syndromes*			

MSSO Comment: The proposal to add a new PT Infantile epileptic spasms syndrome to primary HLT Neonate/infant onset developmental and epileptic encephalopathy syndromes is not approved after suspension. The proposed term was added as LLT Infantile epileptic spasm syndrome to PT Infantile spasms in change request 2025281016.

Detail Report

CR Number: 2025290005 **Implementation Date:** 08-Dec-25 Related CR: 2025290005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Early infantile developmental and epileptic encephalopathy*	Approved Not as Requested After Suspension	Proposed PT	
			Early infantile developmental and epileptic encephalopathy	10093383
HLT primary	*Neonate/infant onset developmental and epileptic encephalopathy syndromes*		HLT primary	
			Neurological disorders congenital NEC	10029300
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Seizures and seizure disorders NEC	10039912
			SOC secondary	
			Nervous system disorders	10029205
			HLT secondary	
			Pervasive developmental disorders NEC	10034740
			SOC secondary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new PT Early infantile developmental and epileptic encephalopathy to primary HLT Neonate/infant onset developmental and epileptic encephalopathy syndromes is approved but not as requested after suspension. Early infantile developmental and epileptic encephalopathy was previously known as Ohtahara syndrome or early infantile epileptic encephalopathy and early myoclonic encephalopathy. Early infantile developmental and epileptic encephalopathy will be added as PT to primary HLT Neurological disorders congenital NEC, to secondary HLT Seizures and seizure disorders NEC and to secondary HLT Pervasive developmental disorders NEC.

CR Number: 2025290006 **Implementation Date:** 08-Dec-25 Related CR: 2025290006

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Cyclin-dependent kinase-like 5 developmental and epileptic encephalopathy*	Approved Not as Requested After Suspension	Proposed LLT		
			Cyclin-dependent kinase-like 5 developmental and epileptic encephalopathy	10093385	Current
To PT	*Early infantile developmental and epileptic encephalopathy*		To PT		
			CDKL5 deficiency disorder	10083005	

MSSO Comment: The proposal to add a new LLT Cyclin-dependent kinase-like 5 developmental and epileptic encephalopathy to PT Early infantile developmental and epileptic encephalopathy is approved but not as requested after suspension. Cyclin-dependent kinase-like 5 developmental and epileptic encephalopathy is a rare genetic neurodevelopmental disorder characterized by early-onset drug-resistant seizures and severe neurodevelopmental impairment with major motor development delay. Cyclin-dependent kinase-like 5 developmental and epileptic encephalopathy will be added as an LLT to PT CDKL5 deficiency disorder.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Clustering epilepsy*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Clustering epilepsy is not approved after suspension. The proposed may be represented by existing LLT/PT Seizure cluster.

CR Number: 2025290008 **Implementation Date:** 08-Dec-25 Related CR: 2025290008

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*PCDH19 clustering epilepsy*	Approved After Suspension	Proposed LLT		
			PCDH19 clustering epilepsy	10093384	Current
			To PT		
			PCDH19 gene-related epilepsy	10087459	

MSSO Comment: The proposal to add a new LLT PCDH19 clustering epilepsy is approved as requested after suspension. PCDH19 clustering epilepsy is an X-linked condition characterized by refractory focal and/or generalized seizures, commonly fever-induced and in clusters, as well as behavioral and psychiatric comorbidity and varying degrees of intellectual disability. PCDH19 clustering epilepsy will be added as an LLT to PT PCDH19 gene-related epilepsy. In a related change, PT PCDH19 gene-related epilepsy will be added to HLT Neurological disorders congenital NEC. Furthermore, PT PCDH19 gene-related epilepsy primary SOC will be re-assigned from SOC Nervous system disorders to SOC Congenital, familial and genetic disorders. In addition, PT PCDH19 gene-related epilepsy will be added to HLT Pervasive developmental disorders NEC.

CR Number: 2025290009 **Implementation Date:** 08-Dec-25 Related CR: 2025290009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Developmental and epileptic encephalopathies with spike-and-wave activation in sleep*	Approved Not as Requested After Suspension	Proposed PT	
			Developmental and epileptic encephalopathy with spike-and-wave activation in sleep	10093382
HLT primary	*Childhood-onset Developmental and epileptic encephalopathy syndromes*		HLT primary	
			Seizures and seizure disorders NEC	10039912
			SOC primary	
			Nervous system disorders	10029205
			HLT secondary	
			Pervasive developmental disorders NEC	10034740
			SOC secondary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new PT Developmental and epileptic encephalopathies with spike-and-wave activation in sleep to primary HLT Childhood-onset Developmental and epileptic encephalopathy syndromes is approved but not as requested after suspension. A spectrum of conditions with varied degree of cognitive, language, behavioral, and motor regression associated with marked spike-wave activation in sleep. The proposed term will be modified to its singular form and added as PT Developmental and epileptic encephalopathy with spike-and-wave activation in sleep to primary HLT Seizures and seizure disorders NEC and to secondary HLT Pervasive developmental disorders NEC. In a related change, PT CSWS syndrome will be demoted under new PT Developmental and epileptic encephalopathy with spike-and-wave activation in sleep.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*BI-RADS incomplete/negative/abnormal*	Approved Not as Requested	Proposed PT	
			BI-RADS incomplete	10093176
			HLT primary	
			Reproductive organ and breast imaging procedures	10038602
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new PT BI-RADS incomplete/negative/abnormal is approved but not as requested. BI-RADS (Breast Imaging Reporting and Data System) is a system that radiologists use to describe results from breast imaging tests like ultrasound, mammography and MRI. A BI-RADS incomplete result means the radiologist may have seen a possible abnormal area, but they need further images to evaluate it, like a diagnostic mammogram or an ultrasound. Proposed term will be modified into a single concept and added as PT BI-RADS incomplete to HLT Reproductive organ and breast imaging procedures. In a related change, the spelled out LLT Breast imaging reporting and data system category incomplete will also be added to new PT BI-RADS incomplete. Furthermore, new PT BI-RADS negative will also be added to HLT Reproductive organ and breast imaging procedures to represent the result which means the radiologist didn't find a significant abnormality on the images. In addition, PT BI-RADS abnormal will also be added to HLT Reproductive organ and breast imaging procedures to represent the test results representing BI-RADS categories 2-6 which mean varying findings from benign to malignant. Additionally, the spelled out LLT Breast imaging reporting and data system category negative will be added to new PT BI-RADS negative. Also, the spelled out LLT Breast imaging reporting and data system category abnormal will also be added to new PT BI-RADS abnormal.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Radiotherapy to testes*	Approved Not as Requested	Proposed PT	
			Testicular radiotherapy	10093182
			HLT primary	
			Testicular and scrotal therapeutic procedures	10043297
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new PT Radiotherapy to testes is approved but not as requested. Testicular radiotherapy is a targeted form of radiation therapy directed at the testes to destroy malignant cells or prevent relapse in conditions such as leukemia or lymphoma. It is typically used prophylactically or therapeutically to eliminate cancerous infiltration while minimizing damage to surrounding tissues. The proposed term will be modified to natural word order and added as PT Testicular radiotherapy to HLT Testicular and scrotal therapeutic procedures.

CR Number: 2025293000 **Implementation Date:** 24-Oct-25 Related CR: 2025293000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Tendency to bleed longer than expected*	Rejected		
To PT	*Haemorrhagic diathesis*			

MSSO Comment: The proposal to add a new LLT Tendency to bleed longer than expected to PT Haemorrhagic diathesis is not approved. PT Haemorrhagic diathesis already represents the proposed concept. The proposed term if added would provide little additional value and does not conform to MedDRA term naming conventions.

Detail Report

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Silicone oil emulsification*	Approved Not as Requested	Proposed LLT		
To PT	*Ocular procedural complication*		*Intraocular silicone oil emulsification*	10093183	Current
			To PT		
			Eye complication associated with device	10069837	

MSSO Comment: The proposal to add a new LLT Silicone oil emulsification to PT Ocular procedural complication is approved but not as requested. Silicone oil emulsification describes a complication when intraocular silicone oil used for retinal detachment surgery breaks into tiny droplets, rather than remaining as a single, cohesive bubble. These droplets can spread throughout the eye, particularly into the anterior chamber and around the trabecular meshwork. The proposed term will be modified for anatomical specificity and added as LLT Intraocular silicone oil emulsification to PT Eye complication associated with device, aligned with other terms referring to intraocular silicone oil complications.

CR Number: 2025293002 **Implementation Date:** 24-Oct-25 Related CR: 2025293002

Proposed LLT	*Teeth temperature sensitivity*	Approved Not as Requested	Proposed LLT		
To PT	*Hyperaesthesia teeth*		*Temperature sensitivity of tooth*	10093184	Current
			To PT		
			Hyperaesthesia teeth	10082426	

MSSO Comment: The proposal to add a new LLT Teeth temperature sensitivity to PT Hyperaesthesia teeth is approved but not as requested. Teeth temperature sensitivity is a condition where teeth experience discomfort or pain in response to hot or cold stimuli. It often occurs when the protective enamel or dentin is worn down, exposing the underlying nerves. The proposed term will be modified to singular form and added as LLT Temperature sensitivity of tooth to PT Hyperaesthesia teeth.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Aborted stroke*	Rejected		
To PT	*Cerebral ischaemia*			

MSSO Comment: The proposal to add a new LLT Aborted stroke to PT Cerebral ischaemia is not approved. Aborted stroke describes stroke-like symptoms that reverse completely, usually after early reperfusion, with no or minimal infarction on brain imaging. The term is not a standard medical term and is only infrequently used in literature. The term usage varies, and it is often inferred from related concepts such as TIA and imaging-negative strokes.

Detail Report

CR Number: 2025293004 **Implementation Date:** 03-Nov-25 Related CR: 2025293004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Systemic administration reaction*	Rejected After Suspension		

MSSO Comment: The proposal to add a new PT Systemic administration reaction is not approved after suspension. A systemic administration reaction is a body-wide response to a substance and may encompass a wide range of signs/symptoms. As such, the term is a broad grouping term and for coding purposes it is best to capture the observed reaction(s).

CR Number: 2025293005 **Implementation Date:** 24-Oct-25 Related CR: 2025293005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*High grade serous ovarian carcinoma*	Approved as Requested	Proposed PT	
			High grade serous ovarian carcinoma	10093186
			HLT primary	
			Ovarian neoplasms malignant (excl germ cell)	10033129
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Ovarian and fallopian tube cysts and neoplasms	10033121
			SOC secondary	
			Reproductive system and breast disorders	10038604

MSSO Comment: The proposal to add a new term High grade serous ovarian carcinoma is approved as requested. High-grade serous ovarian carcinoma is an aggressive epithelial ovarian cancer and it typically presents at an advanced stage. It is considered a distinct tumor type from low-grade serous ovarian carcinoma rather than a spectrum, because they have different origins, as well as different morphology and molecular and genetic signatures. High grade serous ovarian carcinoma will be added as PT to primary HLT Ovarian neoplasms malignant (excl germ cell) and to secondary HLT Ovarian and fallopian tube cysts and neoplasms.

Detail Report

CR Number: 2025293006 **Implementation Date:** 24-Oct-25 Related CR: 2025293006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Uterine blood clot*	Approved as Requested	Proposed LLT		
			Uterine blood clot	10093187	Current
			To PT		
			Uterine haemorrhage	10046788	

MSSO Comment: The proposal to add a new term Uterine blood clot is approved as requested. A uterine blood clot is a mass of coagulated blood that forms within the uterus, often expelled during menstruation or after childbirth. It can be a normal part of menstrual flow, but large or frequent clots may indicate conditions such as fibroids, hormonal imbalance, or miscarriage. Uterine blood clot will be added as LLT to PT Uterine haemorrhage for consistency with other similar terms.

CR Number: 2025293007 **Implementation Date:** 24-Oct-25 Related CR: 2025293007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Intrauterine device expelled with blood clot*	Rejected		

MSSO Comment: The proposal to add a new term Intrauterine device expelled with blood clot is not approved. When an intrauterine device (IUD) is expelled with a blood clot, heavy bleeding or a clot can push the device out of the uterus. At the same time, the IUD can irritate the uterine lining, increasing bleeding and clot formation. This combination of mechanical pressure and uterine response causes the IUD to be expelled along with the clot. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance.

CR Number: 2025293008 **Implementation Date:** 24-Oct-25 Related CR: 2025293008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*B cell malignancy*	Approved Not as Requested	Proposed PT	
			B-cell malignancy	10093185
			HLT primary	
			Haematologic neoplasms NEC	10018845
			SOC primary	
			Neoplasms benign, malignant and unspecified (incl cysts and polyps)	10029104
			HLT secondary	
			Haematologic neoplasms NEC	10018845
			SOC secondary	
			Blood and lymphatic system disorders	10005329

MSSO Comment: The proposal to add a new term B cell malignancy is approved but not as requested. These malignancies, which include diseases such as chronic lymphocytic leukemia, diffuse large B-cell lymphoma, and multiple myeloma, are characterized by uncontrolled proliferation and accumulation of abnormal B cells, often leading to impaired immune function and organ damage. The proposed term will be modified to its hyphenated form and added as PT B-cell malignancy to bi-axial HLT Haematologic neoplasms NEC (primary SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps), secondary SOC Blood and lymphatic system disorders).

CR Number: 2025294000 **Implementation Date:** 24-Oct-25 Related CR: 2025294000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Posterior cord syndrome*	Approved Not as Requested	Proposed PT	
			Posterior cord syndrome	10093188
			HLT primary	
			Spinal cord and nerve root disorders NEC	10041544
			SOC primary	
			Nervous system disorders	10029205
			HLT secondary	
			Spinal cord injuries NEC	10027662
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new LLT Posterior cord syndrome is approved but not as requested. Posterior cord syndrome (PCS) is the least common of the spinal cord injury incomplete clinical syndromes. PCS is described as a selective dysfunction of the posterior columns of the spinal cord, resulting in impairments of proprioceptive and vibration sense, two-point discrimination, and to a more variable extent, sense of deep touch and pressure below the level of injury. Posterior cord syndrome will be added as PT to primary HLT Spinal cord and nerve root disorders NEC and to secondary HLT Spinal cord injuries NEC.

			Joint capsulotomy	10093190
			HLT primary	
			Joint therapeutic procedures	10023221
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new LLT Joint capsulotomy is approved but not as requested. Joint capsulotomy is defined as a surgical procedure that involves the incision of the joint capsule to release contractures and facilitate the correction of deformities. Joint capsulotomy will be added as PT to HLT Joint therapeutic procedures.

CR Number: 2025294002 **Implementation Date:** 24-Oct-25 Related CR: 2025294002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Cholecystokinin-cholescintigraphy*	Approved Not as Requested	Proposed PT	
			Cholecystokinin-cholescintigraphy	10093189
			HLT primary	
			Hepatobiliary imaging procedures	10019808
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Cholecystokinin-cholescintigraphy is approved but not as requested. Cholecystokinin-cholescintigraphy is the gold standard test for evaluating patients for obstructive cholecystitis or biliary dyskinesia. The finding of an abnormal gallbladder ejection fraction could signal the presence of an array of disease entities, including biliary dyskinesia, chronic or acute cholecystitis, and bile sludging. Cholecystokinin-cholescintigraphy will be added as a PT to HLT Hepatobiliary imaging procedures.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Cerebral hemiatrophy*	Approved Not as Requested	Proposed LLT		
HLT primary	*Cerebral disorders congenital*		*Cerebral hemiatrophy*	10093194	Current
SOC primary	*Congenital, familial and genetic disorders*		To PT		
			Cerebral atrophy	10008096	

MSSO Comment: The proposal to add a new PT Cerebral hemiatrophy to primary HLT Cerebral disorders congenital in SOC Congenital, familial and genetic disorders and secondary HLT Structural brain disorders NEC in SOC Nervous system disorders is approved but not as requested. Cerebral hemiatrophy is a rare neurological disorder where one cerebral hemisphere is significantly smaller than the other. This can result from congenital factors or acquired causes (such as stroke, infection, trauma, or prolonged seizures in early childhood). Cerebral hemiatrophy will be added as LLT to PT Cerebral atrophy aligned with similar concepts such as LLT Frontotemporal cortical atrophy.

CR Number: 2025294009 **Implementation Date:** 24-Oct-25 Related CR: 2025294009

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Right cerebral hemiatrophy*	Rejected		
To PT	*Cerebral hemiatrophy*			

MSSO Comment: The proposal to add a new LLT Right cerebral hemiatrophy to PT Cerebral hemiatrophy is not approved. MedDRA usually refrains from creating separate right or left variants of paired anatomical structures. Moreover, for the proposed concept, clinical differences between right and left cerebral hemiatrophy depend on the dominant hemisphere.

CR Number: 2025294010 **Implementation Date:** 24-Oct-25 Related CR: 2025294010

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Left cerebral hemiatrophy*	Rejected		
To PT	*Cerebral hemiatrophy*			

MSSO Comment: The proposal to add a new LLT Left cerebral hemiatrophy to PT Cerebral hemiatrophy is not approved. MedDRA usually refrains from creating separate right or left variants of paired anatomical structures. Moreover, for the proposed concept, clinical differences between right and left cerebral hemiatrophy depend on the dominant hemisphere.

Detail Report

CR Number: 2025294011 **Implementation Date:** 24-Oct-25 Related CR: 2025294011

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Primary cerebral hemiatrophy*	Approved Not as Requested	Proposed LLT		
To PT	*Cerebral hemiatrophy*		*Primary cerebral hemiatrophy*	10093195	Current
			To PT		
			Cerebral atrophy congenital	10052236	

MSSO Comment: The proposal to add a new LLT Primary cerebral hemiatrophy to PT Cerebral hemiatrophy is approved but not as requested. Primary (congenital) cerebral hemiatrophy arises due to developmental anomalies or vascular insults occurring before or around birth, leading to underdevelopment of one cerebral hemisphere. It typically presents early in life with delayed milestones, seizures, or weakness on one side of the body. Primary cerebral hemiatrophy will be added as LLT to PT Cerebral atrophy congenital.

CR Number: 2025294012 **Implementation Date:** 24-Oct-25 Related CR: 2025294012

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #

Proposed Term	*Glomerular hypertrophy*	Approved as Requested	Proposed LLT		
			Glomerular hypertrophy	10093197	Current
			To PT		
			Glomerulonephropathy	10051920	

MSSO Comment: The proposal to add a new term Glomerular hypertrophy is approved as requested. Glomerular hypertrophy is the enlargement of renal glomeruli, usually as an adaptive response to nephron loss or increased filtration load. It occurs in contexts of nephron loss or reduction, such as nephrectomy, chronic glomerulonephritis, or diabetic kidney disease. It is essentially a histological finding diagnosed by the pathologist when examining a renal biopsy. Glomerular hypertrophy will be added as LLT to PT Glomerulonephropathy.

MSSO Comment: The proposal to rename PT/LLT Laparoscopic surgery to Therapeutic laparoscopic surgery is approved but not as requested. It is not appropriate to modify MedDRA terms to resolve coding difficulties, as these result from implementation issues rather than a structural problem with the terminology. The proposed challenge may be best addressed with specific coding conventions to address the nuances. Instead of renaming, a new LLT Therapeutic laparoscopic surgery will be added to PT Laparoscopic surgery.

CR Number: 2025294016 **Implementation Date:** 24-Oct-25 Related CR: 2025294016

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Renal pelvic cyst*	Approved as Requested	Proposed LLT		
			Renal pelvic cyst	10093200	Current
			To PT		
			Renal cyst	10038423	

MSSO Comment: The proposal to add a new term Renal pelvic cyst is approved as requested. A renal pelvic cyst is a well-circumscribed, fluid-filled lesion arising within the renal pelvis or pelvicalyceal system. It is typically benign and asymptomatic, but large or obstructive cysts may lead to hydronephrosis, hematuria, or flank pain. Renal pelvic cyst will be added as LLT to PT Renal cyst.

Detail Report

CR Number: 2025294017 **Implementation Date:** 03-Nov-25 Related CR: 2025294017

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Necrotising enterocolitis*	Approved Not as Requested After Suspension	Proposed LLT		
From PT	*Necrotising colitis*		*Necrotising enterocolitis*	10028884	Current
HLT primary	*Gastrointestinal inflammatory disorders NEC*		From PT		
			Necrotising colitis	10051606	
			To PT		
			Necrotising enterocolitis neonatal	10055667	

MSSO Comment: The proposal to promote the LLT Necrotising enterocolitis from PT Necrotising colitis to primary HLT Gastrointestinal inflammatory disorders NEC in SOC Gastrointestinal disorders is approved but not as requested after suspension. Necrotizing enterocolitis (NEC) primarily affects premature infants and can involve both the small intestine and colon, whereas necrotizing colitis usually occurs in older children or adults and is limited to the colon. NEC is multifactorial, often linked to prematurity, formula feeding, and gut immaturity, while necrotizing colitis is typically caused by ischemia, infection, or inflammatory conditions. Clinically and radiologically, NEC presents with pneumatosis intestinalis and systemic instability, whereas necrotizing colitis shows colonic wall thickening and variable systemic effects. NEC almost exclusively occurs in neonates, especially premature infants, because it is closely linked to immature intestinal barriers, underdeveloped immunity, and altered gut microbiota. It is extremely rare in older children or adults, where it is now called neutropenic enterocolitis. LLT Necrotising enterocolitis will be moved from PT Necrotising colitis to PT Necrotising enterocolitis neonatal. In a related change, the following LLTs will be moved from PT Necrotising colitis to PT Necrotising enterocolitis neonatal: LLT Enterocolitis necrotizing, LLT Necrotizing enterocolitis and LLT Enterocolitis necrotising. Furthermore, new LLT Adult necrotising enterocolitis and LLT Adult necrotizing enterocolitis will be added to PT Neutropenic colitis to represent a rare condition in adults, typically caused by intestinal ischemia or severe systemic illness.

			Acute hemorrhagic necrotizing enteritis	10093205	Current
			To PT		
			Enteritis necroticans	10014878	

MSSO Comment: The proposal to add a new term Acute hemorrhagic necrotic enteritis is approved but not as requested. Acute hemorrhagic necrotizing enteritis, also called enteritis necroticans, is an acute, segmental necrotizing inflammation of the small intestine that leads to hemorrhage, ulceration, and sometimes perforation. It is most often associated with Clostridium perfringens type C infection. The proposed term will be modified to the form most commonly found in literature and added as LLT Acute hemorrhagic necrotizing enteritis to PT Enteritis necroticans. In a related change, the British English spelled counterpart term Acute haemorrhagic necrotising enteritis will also be added as LLT to PT Enteritis necroticans.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device cool temperature production insufficient*	Approved as Requested	Proposed LLT		
To PT	*Device temperature production issue*		*Device cool temperature production insufficient*	10093227	Current
			To PT		
			Device temperature production issue	10093225	

MSSO Comment: The proposal to add a new LLT Device cool temperature production insufficient to PT Device temperature production issue is approved as requested. Device cool temperature production insufficient represents a problem associated with the device not producing the intended cool temperature. LLT Device cool temperature production insufficient will be added to new PT Device temperature production issue which was added in change request 2025302008.

Detail Report

CR Number: 2025302007 **Implementation Date:** 30-Oct-25 Related CR: 2025302007

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device heat production insufficient*	Approved as Requested	Proposed LLT		
To PT	*Device temperature production issue*		*Device heat production insufficient*	10093231	Current
			To PT		
			Device temperature production issue	10093225	

MSSO Comment: The proposal to add a new LLT Device heat production insufficient to PT Device temperature production issue is approved as requested. Device heat production insufficient represents a problem associated with the device not producing the intended heat. LLT Device heat production insufficient will be added to new PT Device temperature production issue which was added in change request 2025302008.

CR Number: 2025302008 **Implementation Date:** 30-Oct-25 Related CR: 2025302008

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Device temperature production issue*	Approved as Requested	Proposed PT	
HLT primary	*Device issues NEC*		*Device temperature production issue*	10093225
SOC primary	*Product issues*		HLT primary	
			Device issues NEC	10069794
			SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to add a new PT Device temperature production issue to primary HLT Device issues NEC in SOC Product issues is approved as requested. Device temperature production issue encompasses different possible types of device temperature production problems to differentiate them from device inherent temperature problems internal to the device.

Detail Report

CR Number: 2025302009 **Implementation Date:** 03-Nov-25 Related CR: 2025302009

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Midfacial hypoplasia*	Approved Not as Requested	Proposed PT	
			Midface hypoplasia	10093233
			HLT primary	
			Musculoskeletal and connective tissue disorders of face, neck and jaw congenital	10028380
			SOC primary	
			Congenital, familial and genetic disorders	10010331
			HLT secondary	
			Musculoskeletal and connective tissue disorders of face, neck and jaw congenital	10028380
			SOC secondary	
			Musculoskeletal and connective tissue disorders	10028395
			HLT secondary	
			Bone and joint injuries NEC	10074485
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new LLT Midfacial hypoplasia is approved but not as requested. Midface hypoplasia is a craniomaxillofacial malformation caused by congenital or acquired factors, often associated with Apert syndrome, Crouzon syndrome, and other genetic diseases, and also seen in cleft lip and palate. Midface hypoplasia can cause narrow maxillary dental arch, depression of the midface, and class III malocclusion. The proposed term will be modified for the term most frequently found in medical literature and added as PT Midface hypoplasia to bi-axial HLT Musculoskeletal and connective tissue disorders of face, neck and jaw congenital (primary SOC Congenital, familial and genetic disorders, secondary SOC Musculoskeletal and connective tissue disorders) and secondary HLT Bone and joint injuries NEC.

CR Number: 2025303002 **Implementation Date:** 07-Nov-25 Related CR: 2025303002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Acute biliary pancreatitis*	Rejected		

MSSO Comment: The proposal to add a new term Acute biliary pancreatitis is not approved. MedDRA cannot accommodate specific terms with several qualifiers for every condition. This concept may be represented in MedDRA by coding with more than one term. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding coding approaches/considerations.

Detail Report

CR Number: 2025304000 **Implementation Date:** 07-Nov-25 Related CR: 2025304000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pulp exposure*	Approved Not as Requested	Proposed PT	
			Dental pulp exposure	10093239
			HLT primary	
			Dental pulp disorders	10044050
			SOC primary	
			Gastrointestinal disorders	10017947
			HLT secondary	
			Abdominal and gastrointestinal injuries NEC	10083613
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new term Pulp exposure is approved but not as requested. Pulp exposure is a condition in which the dental pulp becomes uncovered due to decay, trauma, or mechanical damage, creating a direct pathway to the external environment. It can lead to inflammation, infection, and pain if not promptly managed. The proposed term will be modified for clarity and added as PT Dental pulp exposure to primary HLT Dental pulp disorders and to secondary HLT Abdominal and gastrointestinal injuries NEC.

CR Number: 2025304001 **Implementation Date:** 07-Nov-25 Related CR: 2025304001

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Lichenoid drug reaction*	Rejected		
From PT	*Drug eruption*			
HLT primary	*Dermatitis ascribed to specific agent*			

MSSO Comment: The proposal to promote the LLT Lichenoid drug reaction from PT Drug eruption to primary HLT Dermatitis ascribed to specific agent in SOC Skin and subcutaneous tissue disorders and secondary HLT Allergies to foods, food additives, drugs and other chemicals in SOC Immune system disorders is not approved. Lichenoid drug reaction is considered a descriptive subgroup within drug eruptions, as it designates a specific histopathological and clinical pattern of drug-induced eruption with lichenoid features. The term is considered appropriately subordinated with other similar descriptive concepts.

Detail Report

CR Number: 2025304002 **Implementation Date:** 10-Nov-25 Related CR: 2025304002

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Myoclonus*	Approved Not as Requested	Proposed PT *Myoclonus*	10028622
To SMQ	*Dystonia (SMQ)*		To SMQ *Dystonia (SMQ)*	20000098
Term scope	*Narrow*		Term scope *Broad*	
			Term_category *A*	
			Term_weight *0*	

MSSO Comment: The proposal to add PT Myoclonus to Dystonia (SMQ) as a narrow term is approved but not as requested. The change request to add PT Myoclonus to Dystonia (SMQ) is approved, but not as requested. Myoclonus is a type of uncontrollable movement that includes sudden, brief involuntary twitching, jerking, or spasm of a single muscle or a group of muscles. A person experiencing myoclonus cannot control it. However, myoclonus is not synonymous with dystonia - which is another movement disorder that causes a muscle, or group of muscles, to contract, often leading to a temporarily sustained posture. There is a rare genetic condition, known as myoclonus - dystonia syndrome, in which both movement disorders occur in the same patient. In the interest of identifying cases of this rare disorder, PT Myoclonus will be added to the broad search of Dystonia (SMQ).

CR Number: 2025304003 **Implementation Date:** 10-Nov-25 Related CR: 2025304003

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Salivary hypersecretion*	Rejected		
To SMQ	*Parkinson-like events (SMQ)*			
Term scope	*Broad*			

MSSO Comment: The proposal to add PT Salivary hypersecretion to Parkinson-like events (SMQ) as a broad term is not approved. The proposal to add PT Salivary hypersecretion to Parkinson-like events (SMQ) is not approved. Many patients with Parkinson's disease display the clinical sign of drooling. Drooling occurs because patients are unable to control and swallow pooled saliva in their mouths. PT Drooling is already a broad search term in Parkinson-like events (SMQ). Salivary hypersecretion, on the other hand is a different disorder characterized by excessive production of saliva. It has many causes including salivary tumors, glandular ectasia and drug effects. Salivary gland function is not presumed to be abnormal in Parkinson's disease, instead patients may have drooling because of their inability to manage this fluid by normal protective mechanisms like swallowing.

Detail Report

CR Number: 2025304023 **Implementation Date:** 18-Nov-25 Related CR: 2025304023

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Incorrect dose selected by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Incorrect dose selected	10080239	Current
			From PT		
			Product selection error	10076542	
			To PT		
			Product selection issue	10093289	

MSSO Comment: The proposal to add a new term Incorrect dose selected by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Incorrect dose selected will be moved from PT Product selection error to new PT Product selection issue, which will be added in a related change to HLT Product selection errors and issues.

Detail Report

CR Number: 2025304024 **Implementation Date:** 18-Nov-25 Related CR: 2025304024

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Incorrect product storage by error.*	Approved Not as Requested After Suspension	Proposed LLT		
			Incorrect product storage	10069328	Current
			From PT		
			Product storage error	10079843	
			To PT		
			Product storage issue	10093285	

MSSO Comment: The proposal to add a new term Incorrect product storage by error. is approved but not as requested after suspension. The proposed term will not be added, instead LLT Incorrect product storage will be moved from PT Product storage error to new PT Product storage issue, added recently in change request 2025304010.

CR Number: 2025304025 **Implementation Date:** 18-Nov-25 Related CR: 2025304025

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Incorrect storage of drug by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Incorrect storage of drug	10064941	Current
			From PT		
			Product storage error	10079843	
			To PT		
			Product storage issue	10093285	

MSSO Comment: The proposal to add a new term Incorrect storage of drug by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Incorrect storage of drug will be moved from PT Product storage error to new PT Product storage issue, added recently in change request 2025304010.

Detail Report

CR Number: 2025304026 **Implementation Date:** 18-Nov-25 Related CR: 2025304026

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Injector positioned upside down by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Injector positioned upside down	10084372	Current
			From PT		
			Device use error	10072878	
			To PT		
			Device use issue	10077812	

MSSO Comment: The proposal to add a new term Injector positioned upside down by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Injector positioned upside down will be moved from PT Device use error to PT Device use issue.

CR Number: 2025304027 **Implementation Date:** 18-Nov-25 Related CR: 2025304027

Change Requested	Link (move) a PT to another HLT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Intentional medical device removal by patient*	Rejected After Suspension		
From HLT	*Intentional product use issues*			
To HLT	*Intentional product misuses*			

MSSO Comment: The proposal to move the PT Intentional medical device removal by patient from HLT Intentional product use issues to HLT Intentional product misuses is not approved after suspension. "Misuse" implies a therapeutic intent by consumer. A device removal can be intentional but without a therapeutic aim (e.g. a patient pulling off a catheter in a moment of anxiety or despair).

CR Number: 2025304028 **Implementation Date:** 18-Nov-25 Related CR: 2025304028

Change Requested	Link (move) a PT to another HLT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Intentional removal of drug delivery system by patient*	Rejected After Suspension		
From HLT	*Intentional product use issues*			
To HLT	*Intentional product misuses*			

MSSO Comment: The proposal to move the PT Intentional removal of drug delivery system by patient from HLT Intentional product use issues to HLT Intentional product misuses is not approved after suspension. "Misuse" implies a therapeutic intent by consumer. A device removal can be intentional but without a therapeutic aim (e.g. a patient pulling off drug delivery system in a moment of anxiety or despair).

Detail Report

CR Number: 2025304029 **Implementation Date:** 18-Nov-25 Related CR: 2025304029

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Pharmacy label placed incorrectly by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Pharmacy label placed incorrectly	10080421	Current
			From PT		
			Product dispensing error	10080359	
			To PT		
			Product dispensing issue	10081771	

MSSO Comment: The proposal to add a new term Pharmacy label placed incorrectly by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Pharmacy label placed incorrectly will be moved from PT Product dispensing error to PT Product dispensing issue.

CR Number: 2025304030 **Implementation Date:** 18-Nov-25 Related CR: 2025304030

Change Requested	Change Status of LLT	Final Disposition	Final Placement	MedDRA Code #	
LLT to change	*Product cleaning error by user*	Approved After Suspension	LLT to change		
Status	*non-current*		*Product cleaning error by user*	10079218	Current
			Status		
			non-current		

MSSO Comment: The proposal to change status of LLT Product cleaning error by user to non-current is approved as requested after suspension in order to remove an "error" term under PT Wrong technique in product usage process.

CR Number: 2025304031 **Implementation Date:** 18-Nov-25 Related CR: 2025304031

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Product concentrate not diluted by error.*	Approved Not as Requested After Suspension	Proposed LLT		
			Product concentrate not diluted	10082542	Current
			From PT		
			Product preparation error	10076869	
			To PT		
			Product preparation issue	10081301	

MSSO Comment: The proposal to add a new term Product concentrate not diluted by error. is approved but not as requested after suspension. The proposed term will not be added, instead LLT Product concentrate not diluted will be moved from PT Product preparation error to PT Product preparation issue.

Detail Report

CR Number: 2025304032 **Implementation Date:** 18-Nov-25 Related CR: 2025304032

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Product used prior to being brought to recommended temperature by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Product used prior to being brought to recommended temperature	10083148	Current
			From PT		
			Product preparation error	10076869	
			To PT		
			Product preparation issue	10081301	

MSSO Comment: The proposal to add a new term Product used prior to being brought to recommended temperature by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Product used prior to being brought to recommended temperature will be moved from PT Product preparation error to PT Product preparation issue.

CR Number: 2025304033 **Implementation Date:** 18-Nov-25 Related CR: 2025304033

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Reconstituted product storage time exceeded by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Reconstituted product storage time exceeded	10092041	Current
			From PT		
			Product storage error	10079843	
			To PT		
			Product storage issue	10093285	

MSSO Comment: The proposal to add a new term Reconstituted product storage time exceeded by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Reconstituted product storage time exceeded will be moved from PT Product storage error to new PT Product storage issue, added recently in change request 2025304010.

CR Number: 2025304034 **Implementation Date:** 18-Nov-25 Related CR: 2025304034

Change Requested	Change Status of LLT	Final Disposition	Final Placement	MedDRA Code #	
LLT to change	*Tablet split by mistake*	Approved After Suspension	LLT to change		
			Tablet split by mistake	10079566	Current
Status	*non-current*		Status		
			non-current		

MSSO Comment: The proposal to change status of LLT Tablet split by mistake to non-current is approved as requested after suspension. The proposal to change status of LLT Tablet split by mistake to non-current is approved as requested after suspension in order to remove an "error/mistake" term under PT Wrong technique in product usage process.

Detail Report

CR Number: 2025304035 **Implementation Date:** 18-Nov-25 Related CR: 2025304035

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Vaccine incorrect diluent used by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Vaccine incorrect diluent used	10087263	Current
			From PT		
			Product preparation error	10076869	
			To PT		
			Product preparation issue	10081301	

MSSO Comment: The proposal to add a new term Vaccine incorrect diluent used by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Vaccine incorrect diluent used will be moved from PT Product preparation error to PT Product preparation issue.

CR Number: 2025304036 **Implementation Date:** 18-Nov-25 Related CR: 2025304036

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Wrong concentration prepared by error*	Approved Not as Requested After Suspension	Proposed LLT		
			Wrong concentration prepared	10079997	Current
			From PT		
			Product preparation error	10076869	
			To PT		
			Product preparation issue	10081301	

MSSO Comment: The proposal to add a new term Wrong concentration prepared by error is approved but not as requested after suspension. The proposed term will not be added, instead LLT Wrong concentration prepared will be moved from PT Product preparation error to PT Product preparation issue.

Detail Report

CR Number: 2025304037 **Implementation Date:** 18-Nov-25 Related CR: 2025304037

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #

Proposed LLT	*Brook's Ileostomy*	Approved Not as Requested	Proposed LLT		
			Brooke ileostomy	10093240	Current
			To PT		
			Ileostomy	10021321	

MSSO Comment: The proposal to add a new LLT Brook's Ileostomy is approved but not as requested. Brooke ileostomy (also known as end ileostomy) is the simplest conventional type of ileostomy, in which the intestinal mucosal surface is everted and sutured to the skin to form the stoma, so that the serosal surface is not exposed to the air. Proposed term will be modified to the term most referenced in literature and added as LLT Brooke ileostomy to PT Ileostomy aligned with synonym LLT End ileostomy.

Change Requested	Add a new SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed SMQ	*Neurocognitive Impairment*	Suspended		

MSSO Comment: The proposal to add a new SMQ Neurocognitive Impairment is suspended. This request will be evaluated to make an initial recommendation on whether to proceed forward with developing the proposed SMQ. If the recommendation is to proceed, then a team comprised of regulatory and industry representatives will be formed to develop and test the proposed SMQ. Inclusion / exclusion criteria and other parts of the SMQ documentation will be created and the SMQ will be given to the MSSO for maintenance. If the answer is not to proceed forward, you will receive a justification explaining why the SMQ was not approved.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Squamous cell carcinoma of cornea*	Approved as Requested	Proposed LLT		
			Squamous cell carcinoma of cornea	10093241	Current
			To PT		
			Malignant neoplasm of cornea	10025871	

MSSO Comment: The proposal to add a new term Squamous cell carcinoma of cornea is approved as requested. Squamous cell carcinoma of the cornea is a rare malignant epithelial tumor belonging to the spectrum of ocular surface squamous neoplasias, which also includes epithelial dysplasia, carcinoma in situ, and invasive squamous cell carcinoma. Squamous cell carcinoma of cornea will be added as LLT to the PT Malignant neoplasm of cornea, similarly to the related LLT Squamous cell carcinoma of conjunctiva, which is also part of the spectrum of ocular surface squamous neoplasias.

Proposed LLT	*Ulcerative Colitis Flare*	Approved Not as Requested	Proposed LLT		
			Ulcerative colitis flare	10093253	Current
			To PT		
			Colitis ulcerative	10009900	

MSSO Comment: The proposal to add a new LLT Ulcerative Colitis Flare is approved but not as requested. An ulcerative colitis flare is a temporary worsening of inflammation in the colon that leads to symptoms like frequent bloody stools, abdominal pain, and urgency. Flares can be triggered by infections, stress, medication changes, or may occur without a clear cause. The proposed term will be modified for MedDRA capitalization rules and added as LLT Ulcerative colitis flare to PT Colitis ulcerative.

Proposed LLT	*Percutaneous transhepatic portal vein angioplasty*	Approved as Requested	Proposed LLT		
			Percutaneous transhepatic portal vein angioplasty	10093256	Current
			To PT		
			Portal vein reconstruction	10080966	

MSSO Comment: The proposal to add a new LLT Percutaneous transhepatic portal vein angioplasty is approved as requested. Percutaneous transhepatic portal vein angioplasty is a radiologic procedure in which a needle is passed through the liver into the portal vein, and a balloon catheter is used to widen a narrowed or obstructed portal vein. A stent is often placed to keep it open. Percutaneous transhepatic portal vein angioplasty will be added as LLT to PT Portal vein reconstruction.

Proposed LLT	*P terminal force V1 (PTFV1)*	Approved Not as Requested	Proposed LLT		
			P terminal force in lead V1	10093257	Current
			To PT		
			Electrocardiogram P wave	10083198	

MSSO Comment: The proposal to add a new LLT P terminal force V1 (PTFV1) is approved but not as requested. P-terminal force in lead V1 is an ECG marker indicating left atrial enlargement or abnormality, reflecting structural remodeling of the atrium. It is clinically significant because it helps identify patients at higher risk for atrial fibrillation, stroke, and underlying heart disease. The proposed term will be modified by removing the acronym and added as the form commonly found in literature as LLT P terminal force in lead V1 to PT Electrocardiogram P wave. In a related change, the acronym LLT PTF-V1 will also be added to PT Electrocardiogram P wave.

Proposed Term	*Intestinal failure- associated liver disease*	Approved Not as Requested	Proposed LLT		
			Intestinal failure-associated liver disease	10093251	Current
			To PT		
			Parenteral nutrition associated liver disease	10074151	

MSSO Comment: The proposal to add a new term Intestinal failure- associated liver disease is approved but not as requested. Intestinal failure-associated liver disease is a serious hepatobiliary complication of intestinal failure and long-term parenteral nutrition, resulting from a complex interplay of gut dysfunction, altered bile acid metabolism, microbiome disruption, nutrient/formula toxicity and recurrent infections. Early recognition, prevention of known risk factors and aggressive management of underlying intestinal failure are critical to improving outcomes. The proposed term will be modified by removing an excess space and added as LLT Intestinal failure-associated liver disease to PT Parenteral nutrition associated liver disease.

CR Number: 2025308005 **Implementation Date:** 10-Nov-25 Related CR: 2025308005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Intestinal failure*	Approved as Requested	Proposed PT	
			Intestinal failure	10093246
			HLT primary	
			Gastrointestinal disorders NEC	10017948
			SOC primary	
			Gastrointestinal disorders	10017947
			HLT secondary	
			Gastrointestinal and hepatobiliary procedural complications	10017927
			SOC secondary	
			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Food malabsorption and intolerance syndromes (excl sugar intolerance)	10016951
			SOC secondary	
			Metabolism and nutrition disorders	10027433

MSSO Comment: The proposal to add a new term Intestinal failure is approved as requested. Intestinal failure is a condition in which the intestines are unable to absorb enough nutrients and fluids to maintain health and growth, often due to extensive bowel resection, disease, or congenital defects. This insufficiency typically necessitates specialized nutritional support, such as parenteral nutrition, to sustain life. Intestinal failure will be added as PT to primary HLT Gastrointestinal disorders NEC, to secondary HLT Gastrointestinal and hepatobiliary procedural complications and to secondary HLT Food malabsorption and intolerance syndromes (excl sugar intolerance).

Proposed Term	*Defunctioning of a pouch*	Approved Not as Requested	Proposed LLT		
			Defunctioning stoma	10093254	Current
			To PT		
			Stoma creation	10080707	

MSSO Comment: The proposal to add a new term Defunctioning of a pouch is approved but not as requested. A defunctioning is the temporary diversion of intestinal content from a surgically constructed intestinal pouch by creating a stoma (usually a loop ileostomy) to reduce the risk of complications like leakage or inflammation while the pouch heals. The proposed term will be modified to describe both the purpose "defunctioning" as well as the procedure and added as LLT Defunctioning stoma to PT Stoma creation.

			Megaduodenum	10093247
			HLT primary	
			Gastrointestinal atonic and hypomotility disorders NEC	10017933
			SOC primary	
			Gastrointestinal disorders	10017947

MSSO Comment: The proposal to add a new term Megaduodenum is approved as requested. Megaduodenum is a rare condition characterized by abnormal dilation of the duodenum, often due to acquired obstruction or congenital muscular defects, leading to impaired motility and delayed gastric emptying. It typically presents with nausea, vomiting, abdominal fullness, and malnutrition, and treatment usually involves surgical correction or bypass. Megaduodenum will be added as PT to HLT Gastrointestinal atonic and hypomotility disorders NEC.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pseudo rheumatoid arthritis*	Rejected		

MSSO Comment: The proposal to add a new term Pseudo rheumatoid arthritis is not approved. The proposed term is an outdated description referring to Chronic calcium pyrophosphate (CPP) crystal inflammatory arthritis ("pseudo-rheumatoid arthritis"). The prefix "pseudo" is often used to highlight similarities between various manifestations of rheumatoid arthritis and other common rheumatic diseases, thus, making the term potentially ambiguous. The concept exists in LLT Calcium pyrophosphate dihydrate deposition disease.

			Abdominal and gastrointestinal injuries NEC	10083613
			SOC primary	
			Injury, poisoning and procedural complications	10022117
			HLT secondary	
			Gastrointestinal disorders NEC	10017948
			SOC secondary	
			Gastrointestinal disorders	10017947

MSSO Comment: The proposal to add a new term Traumatic disembowelment or abdominal evisceration is approved but not as requested. Traumatic disembowelment/evisceration is the forcible and violent rupture or removal of internal abdominal organs due to an external injury, accident, or violent assault. It typically results in severe hemorrhaging, shock, and is often immediately life-threatening. The proposed term will be modified and added as a single concept PT Traumatic abdominal evisceration to primary HLT Abdominal and gastrointestinal injuries NEC and secondary HLT Gastrointestinal disorders NEC.

			Vascular disorders	10047065
			HLT secondary	
			Abdominal and gastrointestinal injuries NEC	10083613
			SOC secondary	
			Injury, poisoning and procedural complications	10022117

MSSO Comment: The proposal to add a new term Hepatic vein haemorrhage is approved as requested. Hepatic vein haemorrhage is defined as the pathological bleeding originating from the hepatic veins, which constitute the major venous outflow channels of the liver into the inferior vena cava. It is a critical vascular event, frequently secondary to hepatic laceration, iatrogenic injury, or underlying hepatic parenchymal disease, and may result in massive hemoperitoneum and acute circulatory instability. Hepatic vein haemorrhage will be added as PT to primary HLT Hepatic vascular disorders, secondary HLT Haemorrhages NEC and secondary HLT Abdominal and gastrointestinal injuries NEC. In a related change, the American English spelled counterpart Hepatic vein hemorrhage will be added as LLT to new PT Hepatic vein haemorrhage.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*BRAF V600 mutation*	Approved Not as Requested	Proposed LLT		
To PT	*BRAF gene mutation*		*BRAF V600 gene mutation*	10093261	Current
			To PT		
			BRAF gene mutation	10075648	

MSSO Comment: The proposal to add a new LLT BRAF V600 mutation to PT BRAF gene mutation is approved but not as requested. A BRAF mutation refers broadly to any genetic alteration in the BRAF gene, which may occur at various positions and can affect signaling activity in different ways. A BRAF V600 mutation is a specific subset involving changes at codon 600—such as V600E or V600K—that typically result in strong kinase activation and have distinct therapeutic implications. The proposed term will be modified for clarity and added as LLT BRAF V600 gene mutation to PT BRAF gene mutation.

CR Number: 2025310002 **Implementation Date:** 19-Nov-25 Related CR: 2025310002

CR Number: 2025310004 **Implementation Date:** 11-Nov-25 Related CR: 2025310004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Gene silencing*	Approved Not as Requested	Proposed LLT		
HLT primary	*Gene analyses*		*Gene silencing*	10093262	Current
SOC primary	*Investigations*		To PT		
			Gene therapy	10090618	

MSSO Comment: The proposal to add a new PT Gene silencing to primary HLT Gene analyses in SOC Investigations is approved but not as requested. Gene silencing is the process by which the expression of a gene is suppressed or completely blocked, preventing the production of its corresponding protein. It can be induced through mechanisms such as RNA interference, antisense oligonucleotides, or epigenetic modifications like DNA methylation and histone alteration. The proposed term represents a type of treatment rather than an investigation, and therefore will be added as LLT Gene silencing to PT Gene therapy.

CR Number: 2025310005 **Implementation Date:** 11-Nov-25 Related CR: 2025310005

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*X-linked retinitis pigmentosa*	Approved as Requested	Proposed LLT		
To PT	*Retinitis pigmentosa*		*X-linked retinitis pigmentosa*	10093263	Current
			To PT		
			Retinitis pigmentosa	10038914	

MSSO Comment: The proposal to add a new LLT X-linked retinitis pigmentosa to PT Retinitis pigmentosa is approved as requested. X-linked retinitis pigmentosa is a severe hereditary form of retinitis pigmentosa caused by mutations in genes located on the X chromosome, mainly RPGR and RP2. It affects almost exclusively males, since they possess only one X chromosome, while carrier females usually present mild symptoms or may be asymptomatic.

From PT	*Congenital floppy infant*		*Floppy infant*	10051004
HLT primary	*Muscle tone abnormalities*		From PT	
			Congenital floppy infant	10053153
			HLT primary	
			Muscle tone abnormalities	10028343
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395
			HLT secondary	
			Muscle tone abnormal	10028342
			SOC secondary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to promote the LLT Floppy infant from PT Congenital floppy infant to primary HLT Muscle tone abnormalities in SOC Musculoskeletal and connective tissue disorders and secondary HLT Muscle tone abnormal in SOC Nervous system disorders is approved as requested. PT Floppy infant was demoted as LLT to PT Congenital floppy infant in a related change to change request 2025232005. As there are relevant acquired forms of Floppy infant and Hypotonia neonatal, LLT Floppy infant will be promoted again to PT level linked to primary HLT Muscle tone abnormalities, secondary HLT Muscle tone abnormal and secondary HLT Newborn complications NEC.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Disembodiment*	Approved After Suspension	Proposed LLT		
To PT	*Autoscopy*		*Disembodiment*	10093317	Current
			To PT		
			Autoscopy	10074080	

MSSO Comment: The proposal to add a new LLT Disembodiment to PT Autoscopy is approved as requested after suspension. An out of body experience is defined by the presence of three phenomenological characteristics: disembodiment (location of oneself outside one's body), the impression of seeing the world from a distant and elevated visuo-spatial perspective and the impression of seeing one's own body (or autoscopy) from this elevated perspective.

CR Number: 2025313004 **Implementation Date:** 14-Nov-25 Related CR: 2025313004

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Insightfulness*	Approved Not as Requested	Proposed PT	
To PT	*Magical thinking*		*Experience of insightfulness*	10093265
			HLT primary	
			Perception disturbances NEC	10082213
			SOC primary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new LLT Insightfulness to PT Magical thinking is approved but not as requested. An experience of insightfulness is an experience of awareness and understanding of the origins and meaning of one's attitudes, feelings, and behavior. Experience of insightfulness will be added as a PT to HLT Perception disturbances NEC.

CR Number: 2025313005 **Implementation Date:** 14-Nov-25 Related CR: 2025313005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Experience of unity*	Approved Not as Requested	Proposed LLT		
HLT primary	*Perception disturbances NEC*		*Experience of unity*	10093266	Current
SOC primary	*Psychiatric disorders*		To PT		
			Spiritual experience	10093264	

MSSO Comment: The proposal to add a new PT Experience of unity to primary HLT Perception disturbances NEC in SOC Psychiatric disorders is approved but not as requested. Experience of unity refers to a profound psychedelic state in which individuals often feel a dissolution of boundaries between self and environment, often accompanied by a sense of interconnectedness with people, nature, or the universe. This experience is typically associated with feelings of peace, meaningfulness, and insight, and is a core feature of “spiritual-type” psychedelic effects. Experience of unity will be added as an LLT to a new PT Spiritual experience, added in change request 2025313007.

HLT primary	*Perception disturbances NEC*		*Spiritual experience*	10093264
SOC primary	*Psychiatric disorders*		HLT primary	
			Perception disturbances NEC	10082213
			SOC primary	
			Psychiatric disorders	10037175

MSSO Comment: The proposal to add a new PT Spiritual experience to primary HLT Perception disturbances NEC in SOC Psychiatric disorders is approved as requested. A spiritual experience under psychedelics is a profound state characterized by a sense of unity or oneness, transcendence of time and space, deep positive mood, and ineffability, often accompanied by spiritual insight or feelings of sacredness. It represents an existential or ego-transcendent aspect of the psychedelic experience, distinct from purely sensory or cognitive effects.

MSSO Comment: The proposal to add a new LLT Seeing light in darkness is not approved. It is not possible to include all the variable expressions reported in questionnaires/surveys in MedDRA if a similar corresponding broader term exists. In addition, this term represents a symptom that may be found in ophthalmological or neurological related pathologies.

CR Number: 2025313026 **Implementation Date:** 14-Nov-25 Related CR: 2025313026

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Feeling of losing control*	Rejected		
HLT primary	*Perception disturbances NEC*			
SOC primary	*Psychiatric disorders*			

MSSO Comment: The proposal to add a new PT Feeling of losing control to primary HLT Perception disturbances NEC in SOC Psychiatric disorders is not approved. This is an ambiguous term and may be associated with numerous psychiatric conditions such as anxiety, stress or impulse-control or other depending on case context.

Detail Report

CR Number: 2025314000 **Implementation Date:** 14-Nov-25 Related CR: 2025314000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Systemic amyloidosis*	Approved as Requested	Proposed LLT	
			Systemic amyloidosis	10093270 Current
			To PT	
			Amyloidosis	10002022

MSSO Comment: The proposal to add a new LLT Systemic amyloidosis is approved as requested. Systemic amyloidosis is a disorder characterized by the extracellular deposition of insoluble fibrillar proteins called amyloid in multiple organs and tissues throughout the body. These amyloid deposits disrupt normal tissue structure and function, leading to progressive organ damage. Systemic amyloidosis will be added as LLT to PT Amyloidosis.

CR Number: 2025314001 **Implementation Date:** 14-Nov-25 Related CR: 2025314001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Near cardiac arrest*	Rejected		

MSSO Comment: The proposal to add a new LLT Near cardiac arrest is not approved. The proposed term is not a defined medical condition, rather it is the vulnerable time either before or immediately following a full cardiac arrest, when the patient's condition is unstable.

CR Number: 2025314006 **Implementation Date:** 14-Nov-25 Related CR: 2025314006

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Data management system issue*	Approved Not as Requested	Proposed PT	
HLT primary	*Quality system issues*		*Manufacturing data management system issue*	10093271
SOC primary	*Product issues*		HLT primary	
			Quality system issues	10091809
			SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to add a new PT Data management system issue to primary HLT Quality system issues in SOC Product issues is approved but not as requested. In product manufacturing, data management system issues often arise from inconsistent or incomplete data, leading to errors in inventory tracking, production scheduling, and quality control. Additionally, poor integration between systems can cause delays, miscommunication, and difficulty in making informed, real-time decisions. The proposed term will be modified for clarity and added as PT Manufacturing data management system issue to HLT Quality system issues.

Detail Report

CR Number: 2025314007 **Implementation Date:** 14-Nov-25 Related CR: 2025314007

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Manufacturing cybersecurity IT issue*	Approved Not as Requested	Proposed LLT		
To PT	*Data management system issue*		*Manufacturing cybersecurity IT issue*	10093272	Current
			To PT		
			Manufacturing data management system issue	10093271	

MSSO Comment: The proposal to add a new LLT Manufacturing cybersecurity IT issue to PT Data management system issue is approved but not as requested. In manufacturing, cybersecurity IT issues include vulnerabilities in industrial control systems and operational technology that can be exploited to disrupt production or steal sensitive data. Manufacturing cybersecurity IT issue will be added as LLT to new PT Manufacturing data management system issue added in change request 2025314006.

CR Number: 2025314008 **Implementation Date:** 14-Nov-25 Related CR: 2025314008

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Manufacturing data integrity issue*	Approved Not as Requested	Proposed LLT		
To PT	*Data management system issue*		*Manufacturing data integrity issue*	10093274	Current
			To PT		
			Manufacturing data management system issue	10093271	

MSSO Comment: The proposal to add a new LLT Manufacturing data integrity issue to PT Data management system issue is approved but not as requested. In manufacturing, data integrity issues occur when information is inaccurate, incomplete, or tampered with, leading to faulty production decisions and quality control problems. Such issues can stem from human error, system glitches, or lack of standardized processes, compromising product reliability and regulatory compliance. Manufacturing data integrity issue will be added as LLT to new PT Manufacturing data management system issue added in change request 2025314006.

CR Number: 2025314009 **Implementation Date:** 14-Nov-25 Related CR: 2025314009

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Laboratory data integrity issue*	Rejected		
To PT	*Data management system issue*			

MSSO Comment: The proposal to add a new LLT Laboratory data integrity issue to PT Data management system issue is not approved. Laboratory data integrity issues generally refer to problems with accuracy, completeness, and reliability of data in any lab setting, such as research or clinical labs. These issues affect experimental results, reporting, and scientific credibility. The term laboratory data integrity issue is broad and thus potentially ambiguous.

Detail Report

CR Number: 2025314010 **Implementation Date:** 14-Nov-25 Related CR: 2025314010

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Manufacturing laboratory data integrity issue*	Approved as Requested	Proposed LLT		
To PT	*Manufacturing laboratory controls issue*		*Manufacturing laboratory data integrity issue*	10093273	Current
			To PT		
			Manufacturing laboratory controls issue	10077797	

MSSO Comment: The proposal to add a new LLT Manufacturing laboratory data integrity issue to PT Manufacturing laboratory controls issue is approved as requested. Manufacturing laboratory data integrity issues specifically occur in labs tied to product manufacturing, like quality control or process development labs. Here, compromised data can directly impact production quality, regulatory compliance, and product safety.

CR Number: 2025314011 **Implementation Date:** 14-Nov-25 Related CR: 2025314011

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Skeeter syndrome*	Rejected		

MSSO Comment: The proposal to add a new LLT Skeeter syndrome is not approved. Skeeter syndrome is an exaggerated local mosquito bite allergy. The concept can be represented by existing LLT/PT Allergy to arthropod bite.

CR Number: 2025314012 **Implementation Date:** 14-Nov-25 Related CR: 2025314012

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Hydronephroureter*	Approved as Requested	Proposed LLT		
			Hydronephroureter	10093275	Current
			To PT		
			Hydronephrosis	10020524	

MSSO Comment: The proposal to add a new term Hydronephroureter is approved as requested. Hydronephrosis is the hydrostatic dilation of the renal pelvis and calyces as a result of obstruction to urine flow downstream. Alternatively, hydronephroureter describes the dilation of the entire upper urinary tract (both the renal pelvicalyceal system and the ureter). Hydronephroureter will be added as LLT to PT Hydronephrosis aligned with LLT Ureterohydronephrosis.

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Photosensitive rash*	Rejected		
From PT	*Photosensitivity reaction*			
To PT	*Solar dermatitis*			

MSSO Comment: The proposal to move the LLT Photosensitive rash from PT Photosensitivity reaction to PT Solar dermatitis is not approved. Photosensitivity or solar/sun sensitivity is an abnormally increased sensitivity of the skin to sunlight or other sources of ultraviolet light. Photosensitivity can be triggered by certain medications, underlying diseases (like lupus), genetic disorders, or topical/chemical exposures. A solar rash or solar dermatitis, on the other hand, is a rash caused directly by sun exposure in someone with normal skin sensitivity.

To PT	*Accidental exposure to product*		*Accidental contact of product with skin*	10093277	Current
			To PT		
			Accidental exposure to product	10073317	

MSSO Comment: The proposal to add a new LLT Accidental contact of product with skin to PT Accidental exposure to product is approved as requested. Accidental contact of a product with the skin can cause numerous reactions including redness, itching, swelling, and blisters, which may appear immediately or after a delay depending on the type of product.

CR Number: 2025316000 **Implementation Date:** 17-Nov-25 Related CR: 2025316000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Carotid plaque*	Rejected		

MSSO Comment: The proposal to add a new term Carotid plaque is not approved. Carotid plaque refers to a measurable atherosclerotic lesion whose size correlates directly with stroke risk. Atherosclerotic plaque is a non-site-specific term and thus correctly placed in HLT Non-site-specific necrosis and vascular insufficiency NEC. Coding in combination with PT Carotid arteriosclerosis will provide a location specific HLT.

Detail Report

CR Number: 2025316003 **Implementation Date:** 17-Nov-25 Related CR: 2025316003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Foodborne diarrhea*	Rejected		

MSSO Comment: The proposal to add a new term Foodborne diarrhea is not approved. “Foodborne diarrhea” is an umbrella term. While most commonly associated with infectious causes, foodborne diarrhea can also result from toxin-mediated mechanisms. MedDRA already includes specific terms for the underlying pathway of infection or intoxication.

CR Number: 2025317000 **Implementation Date:** 25-Nov-25 Related CR: 2025317000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*External supplier qualification issue in manufacturing*	Approved as Requested	Proposed PT	
			External supplier qualification issue in manufacturing	10093314
HLT primary	*Quality system issues*		HLT primary	
			Quality system issues	10091809
SOC primary	*Product issues*		SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to add a new PT External supplier qualification issue in manufacturing to primary HLT Quality system issues in SOC Product issues is approved as requested. An external supplier qualification issue in pharmaceutical manufacturing refers to any problem or non-compliance identified during the evaluation or ongoing monitoring of a third-party supplier that could affect the quality, safety, or reliability of supplied materials or components used in manufacturing. This includes deficiencies in documentation, processes, audits, or adherence to regulatory and internal quality standards.

CR Number: 2025317001 **Implementation Date:** 25-Nov-25 Related CR: 2025317001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Cell bank production issue*	Approved as Requested	Proposed LLT	
			Cell bank production issue	10093316 Current
To PT	*Cell bank issue*		To PT	
			Cell bank issue	10093102

MSSO Comment: The proposal to add a new LLT Cell bank production issue to PT Cell bank issue is approved as requested. A cell bank production issue in pharmaceutical manufacturing refers to any problem or deviation occurring during the creation, expansion, or maintenance of cell banks used as the source of biological materials for drug production. Such issues can impact the quality, consistency, or safety of the cell bank and, consequently, the final product.

CR Number: 2025317002 **Implementation Date:** 25-Nov-25 Related CR: 2025317002

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Analytical testing repeated without appropriate rationale*	Approved as Requested	Proposed PT	
			Analytical testing repeated without appropriate rationale	10093315
HLT primary	*Manufacturing laboratory controls issues*		HLT primary	
			Manufacturing laboratory controls issues	10077541
SOC primary	*Product issues*		SOC primary	
			Product issues	10077536

MSSO Comment: The proposal to add a new PT Analytical testing repeated without appropriate rationale to primary HLT Manufacturing laboratory controls issues in SOC Product issues is approved as requested. An analytical testing repeated without appropriate rationale in pharmaceutical manufacturing refers to instances where a test is performed multiple times on the same sample or batch without a justified scientific or regulatory reason. This can lead to unnecessary resource use, data redundancy, and potential misinterpretation of results.

CR Number: 2025317003 **Implementation Date:** 17-Nov-25 Related CR: 2025317003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Bexigoma*	Rejected		
To PT	*Urinary retention*			

MSSO Comment: The proposal to add a new LLT Bexigoma to PT Urinary retention is not approved. Bexigoma comes from Portuguese (bexiga = bladder + -oma as a suffix meaning a swelling or mass). It refers to a distended, palpable urinary bladder, typically due to urinary retention. Bexigoma is not an accepted medical term in English and can be represented with existing terms.

CR Number: 2025317004 **Implementation Date:** 17-Nov-25 Related CR: 2025317004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Belly dancer's dyskinesia*	Approved as Requested	Proposed LLT		
			Belly dancer's dyskinesia	10093276	Current
			To PT		
			Dyskinesia	10013916	

MSSO Comment: The proposal to add a new term Belly dancer's dyskinesia is approved as requested. Belly dancer's dyskinesia is a rare focal hyperkinetic movement disorder of the anterior abdominal wall, marked by involuntary, undulating, diaphragmatic or segmental motor discharges that cannot be voluntarily suppressed. It typically arises from medication effects (especially dopamine-modulating drugs), phrenic nerve irritation after surgery, or underlying neurological or metabolic disease. Belly dancer's dyskinesia will be added as an LLT to PT Dyskinesia.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Optic nerve calcification*	Approved Not as Requested	Proposed PT	
			Optic nerve calcification	10093280
			HLT primary	
			Optic disc abnormalities NEC	10030913
			SOC primary	
			Eye disorders	10015919
			HLT secondary	
			Optic nerve disorders NEC	10030933
			SOC secondary	
			Nervous system disorders	10029205

MSSO Comment: The proposal to add a new LLT Optic nerve calcification is approved but not as requested. Optic nerve calcification involves the deposition of calcium within or around the optic nerve, most commonly seen as optic nerve head drusen, and can be detected on CT scans or ophthalmoscopic examination. While often asymptomatic, it can sometimes cause visual field defects or mimic optic disc swelling, with management ranging from observation to intervention if associated with compressive lesions. Optic nerve calcification will be added as PT to primary HLT Optic disc abnormalities NEC and to secondary HLT Optic nerve disorders NEC. In a related change, PT Optic disc drusen will have a secondary HLT Optic nerve disorders NEC.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Traumatic ischemia*	Rejected		

MSSO Comment: The proposal to add a new PT Traumatic ischemia is not approved. Proposed term is ambiguous and the manifestation of ischemia due to trauma may manifest differently depending on the organ/site of occurrence. The actual site of traumatic ischemia may be coded using more than one MedDRA term. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding the coding of combination terms.

CR Number: 2025317009 **Implementation Date:** 17-Nov-25 Related CR: 2025317009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Lichenoid vulvar disease*	Rejected		

MSSO Comment: The proposal to add a new PT Lichenoid vulvar disease is not approved. Lichenoid vulvar dermatoses, which include lichen sclerosus (LS), lichen planus (LP), and lichen simplex chronicus (LSC), are chronic inflammatory conditions that can manifest with a variety of symptoms, most commonly pruritus or pain. Although there are overlapping clinical characteristics of LS, LP, and LSC, each condition also has its own unique features. Proposed term is an imprecise and broad grouping term.

CR Number: 2025317010 **Implementation Date:** 17-Nov-25 Related CR: 2025317010

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Vision degrading vitreopathy*	Rejected		

MSSO Comment: The proposal to add a new PT Vision degrading vitreopathy is not approved. The proposed concept is a descriptive term which combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance.

Detail Report

CR Number: 2025317011 **Implementation Date:** 17-Nov-25 Related CR: 2025317011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Cytomegalovirus Respiratory Tract Infection*	Approved Not as Requested	Proposed PT	
			Cytomegalovirus respiratory tract infection	10093281
			HLT primary	
			Cytomegaloviral infections	10011827
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Respiratory tract infections NEC	10057190
			SOC secondary	
			Respiratory, thoracic and mediastinal disorders	10038738

MSSO Comment: The proposal to add a new PT Cytomegalovirus Respiratory Tract Infection is approved but not as requested. Cytomegalovirus (CMV) respiratory tract infection refers to CMV replication within the respiratory tract, causing inflammation of the airway and/or lung tissue, most often in immunocompromised individuals. It ranges from mild upper-airway involvement to true CMV pneumonitis. The proposed term will be modified for MedDRA capitalization rules and added as PT Cytomegalovirus respiratory tract infection to primary HLT Cytomegaloviral infections and secondary HLT Respiratory tract infections NEC.

CR Number: 2025317012 **Implementation Date:** 17-Nov-25 Related CR: 2025317012

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Cytomegalovirus Pneumonitis*	Approved Not as Requested	Proposed LLT		
			Cytomegalovirus pneumonitis	10093282	Current
			To PT		
			Pneumonia cytomegaloviral	10035676	

MSSO Comment: The proposal to add a new PT Cytomegalovirus Pneumonitis is approved but not as requested. Cytomegalovirus (CMV) pneumonitis and pneumonia are often used interchangeably. Especially in immunocompromised patients (e.g., transplant recipients, advanced HIV, chemotherapy), CMV can cause CMV pneumonitis, characterized by viral replication in lung tissue, inflammation, and impaired gas exchange. The proposed term will be modified for MedDRA capitalization rules and added as LLT Cytomegalovirus pneumonitis to PT Pneumonia cytomegaloviral.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Insect bite dermatitis*	Rejected		

MSSO Comment: The proposal to add a new term Insect bite dermatitis is not approved. The proposed concept may be represented by combination coding as it is not possible to represent in MedDRA every possible cause of dermatitis. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding the coding of combination terms.

CR Number: 2025321000 **Implementation Date:** 18-Nov-25 Related CR: 2025321000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Conversion pause*	Approved Not as Requested	Proposed PT	
			Atrial fibrillation conversion pause	10093284
			HLT primary	
			Supraventricular arrhythmias	10042600
			SOC primary	
			Cardiac disorders	10007541

MSSO Comment: The proposal to add a new PT Conversion pause is approved but not as requested. A conversion pause after atrial fibrillation (AF) is a brief delay in which the sinus node takes a moment to resume normal pacing after the arrhythmia ends, creating a short transient pause that may occasionally cause lightheadedness if prolonged. It can be considered a physiological, transient pause after AF termination, not necessarily reflecting sinus node arrest or dysfunction. The proposed term will be modified for clarity and added as PT Atrial fibrillation conversion pause to HLT Supraventricular arrhythmias.

CR Number: 2025322024 **Implementation Date:** 21-Nov-25 Related CR: 2025322024

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Multiple acyl-CoA dehydrogenase deficiency*	Approved as Requested	Proposed LLT		
			Multiple acyl-CoA dehydrogenase deficiency	10093301	Current
			To PT		
			Multiple acyl-coenzyme A dehydrogenase deficiency	10090590	

MSSO Comment: The proposal to add a new LLT Multiple acyl-CoA dehydrogenase deficiency is approved as requested. Multiple acyl-CoA dehydrogenase deficiency is the standard abbreviation for Multiple acyl-coenzyme A dehydrogenase deficiency. Multiple acyl-CoA dehydrogenase deficiency will be added as the abbreviated form synonym LLT to PT Multiple acyl-coenzyme A dehydrogenase deficiency.

CR Number: 2025322025 **Implementation Date:** 21-Nov-25 Related CR: 2025322025

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Acylcarnitine*	Approved Not as Requested	Proposed PT	
			Acylcarnitine profile	10093299
			HLT primary	
			Metabolism tests NEC	10027434
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new LLT Acylcarnitine is approved but not as requested. An acylcarnitine profile is a tandem mass spectrometry analysis that measures multiple acylcarnitine species to identify characteristic patterns reflecting mitochondrial fatty-acid transport and β-oxidation. It can signal fatty-acid oxidation defects, organic acidemias, or carnitine transport disorders. The proposed term will be modified adding the word "profile" to it in order to reflect that this clinical test does not measure a single analyte, but a panel of many individual acylcarnitines. Acylcarnitine profile will be added as PT to HLT Metabolism tests NEC.

CR Number: 2025322026 **Implementation Date:** 21-Nov-25 Related CR: 2025322026

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Candida glabrata*	Approved Not as Requested	Proposed LLT		
			Candida glabrata infection	10093302	Current
			To PT		
			Candida infection	10074170	

MSSO Comment: The proposal to add a new LLT Candida glabrata is approved but not as requested. Candida glabrata is a Candida species characterized by low virulence but high resilience, notable intrinsic and acquired resistance—especially to azoles— making it a persistent pathogen particularly in older or azole-exposed patients. The proposed term will be modified for greater clarity and added as LLT Candida glabrata infection to PT Candida infection.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Attachment disturbance*	Approved Not as Requested	Proposed PT	
			Impaired maternal-infant bonding	10093307
			HLT primary	
			Postpartum complications NEC	10036416
			SOC primary	
			Pregnancy, puerperium and perinatal conditions	10036585

MSSO Comment: The proposal to add a new LLT Attachment disturbance is approved but not as requested. Impaired maternal–infant bonding represents a clinical observation in which a mother experiences reduced, delayed, or absent feelings of emotional connection toward her infant, without this necessarily constituting a psychiatric disorder. The concept reflects a mother's struggle to develop the expected sense of closeness or attachment. The proposed term will be modified to the most referenced form in literature and added as PT Impaired maternal-infant bonding to HLT Postpartum complications NEC.

CR Number: 2025322028 **Implementation Date:** 21-Nov-25 Related CR: 2025322028

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Mycobacterium abscessus infection in bladder and prostate*	Rejected		

MSSO Comment: The proposal to add a new LLT Mycobacterium abscessus infection in bladder and prostate is not approved. MedDRA cannot accommodate a specific anatomic location for every pathogen-qualified infection. Please refer to Section 3.8.2 of the MedDRA Term Selection: Points to Consider Document regarding coding approaches/considerations regarding No available MedDRA term includes both microorganism and anatomic location. Furthermore, MedDRA does not generally have terms for multiple anatomic sites.

			Urethral haemorrhage	10049710

MSSO Comment: The proposal to add a new term Urethrorrhagia is approved as requested. Urethrorrhagia is the flow of blood from the urethra and will be added as LLT to PT Urethral haemorrhage.

CR Number: 2025322041 **Implementation Date:** 21-Nov-25 Related CR: 2025322041

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Grippal syndrome*	Rejected		

MSSO Comment: The proposal to add a new LLT Grippal syndrome is not approved. The proposed term is not an English expression for the concept.

Detail Report

CR Number: 2025322042 **Implementation Date:** 21-Nov-25 Related CR: 2025322042

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Reticular dysgenesis*	Approved as Requested	Proposed LLT		
			Reticular dysgenesis	10093309	Current
			To PT		
			Combined immunodeficiency	10010099	

MSSO Comment: The proposal to add a new term Reticular dysgenesis is approved as requested. Reticular dysgenesis is a very severe, rare genetic disorder that is the most extreme form of severe combined immunodeficiency. It is characterized by a complete lack of both innate and adaptive immune cells, congenital deafness, and agranulocytosis. Reticular dysgenesis will be added as sub-concept LLT to PT Combined immunodeficiency.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Nomophobia*	Rejected		

MSSO Comment: The proposal to add a new term Nomophobia is not approved. The proposed terms in not a universally accepted concept.

CR Number: 2025322044 **Implementation Date:** 21-Nov-25 Related CR: 2025322044

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Internet addiction disorder*	Approved Not as Requested	Proposed LLT		
			Internet use disorder	10093311	Current
			To PT		
			Information technology use disorder	10093308	

MSSO Comment: The proposal to add a new term Internet addiction disorder is approved but not as requested. Internet use disorder is characterized by excessive or poorly controlled preoccupations, urges or behaviors regarding computer use and internet access that lead to impairment or distress. The proposed term will be modified for clarity and added as LLT Internet use disorder to new PT Information technology use disorder which will be added, in a related change, to HLT Substance related and addictive disorders.

Detail Report

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Generative AI addictive syndrome*	Rejected		

MSSO Comment: The proposal to add a new term Generative AI addictive syndrome is not approved. It is not possible to add every possible granular disorder term for technology related addictions.

CR Number: 2025323000 **Implementation Date:** 21-Nov-25 Related CR: 2025323000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Pregnancy prevention programm issue*	Rejected		
HLT primary	*Medication errors, product use errors and issues NEC*			
SOC primary	*Injury, poisoning and procedural complications*			

MSSO Comment: The proposal to add a new PT Pregnancy prevention programm issue to primary HLT Medication errors, product use errors and issues NEC in SOC Injury, poisoning and procedural complications is not approved. MedDRA limits the inclusion of generic drug names and generally does not include trial/study or program terms. A pregnancy-prevention-program issue is not a valid MedDRA concept because, although MedDRA includes terminology for prophylaxis (e.g., “pregnancy prophylaxis,” “contraception,” “contraceptive therapy”), it does not contain terms describing failure of specific program steps or procedural non-compliance.

Detail Report

CR Number: 2025323001 **Implementation Date:** 21-Nov-25 Related CR: 2025323001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Victim of suspected chemical submission*	Approved as Requested	Proposed LLT		
To PT	*Victim of chemical submission*		*Victim of suspected chemical submission*	10093295	Current
			To PT		
			Victim of chemical submission	10072662	

MSSO Comment: The proposal to add a new LLT Victim of suspected chemical submission to PT Victim of chemical submission is approved as requested, aligned with LLT Suspected chemical submission. Chemical submission is challenging to diagnose because many incapacitating agents are rapidly metabolized or excreted, resulting in minimal or transient detectable biomarkers in blood or urine. Additionally, the clinical presentation—such as acute cognitive impairment, anterograde amnesia, and central nervous system depression—is nonspecific and can mimic ethanol intoxication or other pharmacologic or metabolic encephalopathies.

CR Number: 2025323002 **Implementation Date:** 21-Nov-25 Related CR: 2025323002

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Chemcial vulnerability*	Rejected		
HLT primary	*Crime victims*			
SOC primary	*Social circumstances*			

MSSO Comment: The proposal to add a new PT Chemcial vulnerability to primary HLT Crime victims in SOC Social circumstances and secondary HLT Cognitive and attention disorders and disturbances NEC in SOC Psychiatric disorders is not approved. The proposed term is ambiguous and not a uniformly understood concept.

CR Number: 2025323003 **Implementation Date:** 21-Nov-25 Related CR: 2025323003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Off label technique in drug usage process*	Approved as Requested	Proposed LLT		
To PT	*Off label use*		*Off label technique in drug usage process*	10093296	Current
			To PT		
			Off label use	10053762	

MSSO Comment: The proposal to add a new LLT Off label technique in drug usage process to PT Off label use is approved as requested. Off-label drug use can include not only unapproved indications but also modifications to the approved administration method.

Detail Report

CR Number: 2025323004 **Implementation Date:** 21-Nov-25 Related CR: 2025323004

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Drug effect stronger than expected*	Approved Not as Requested	Proposed PT	
HLT primary	*Therapeutic and nontherapeutic responses*		*Drug effect more than expected*	10093294
SOC primary	*General disorders and administration site conditions*		HLT primary	
			Therapeutic and nontherapeutic responses	10043409
			SOC primary	
			General disorders and administration site conditions	10018065

MSSO Comment: The proposal to add a new PT Drug effect stronger than expected to primary HLT Therapeutic and nontherapeutic responses in SOC General disorders and administration site conditions is approved but not as requested. A drug effect stronger than expected occurs when a medication produces a more intense or exaggerated response than anticipated at a given dose. The proposed term will be modified for better alignment and added as PT Drug effect more than expected to HLT Therapeutic and nontherapeutic responses.

CR Number: 2025323005 **Implementation Date:** 25-Nov-25 Related CR: 2025323005

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Anaphylaxis criteria (Sampson)*	Rejected		

MSSO Comment: The proposal to add a new PT Anaphylaxis criteria (Sampson) is not approved. The proposed concept is not a sign/symptom, condition nor investigative term, but a grouping of criteria which is not in scope of MedDRA. There are existing terms for the conditions mentioned in the criteria which may be used later to evaluate if the criteria are met. MedDRA provides an SMQ for retrieval of cases of anaphylaxis including an algorithm to refine the search.

CR Number: 2025324000 **Implementation Date:** 01-Dec-25 Related CR: 2025324000

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Invasive extraintestinal pathogenic E. coli disease*	Approved Not as Requested After Suspension	Proposed LLT		
			Invasive extraintestinal pathogenic E. coli disease infection	10093329	Current
			To PT		
			Escherichia infection	10061126	

MSSO Comment: The proposal to add a new LLT Invasive extraintestinal pathogenic E. coli disease is approved but not as requested after suspension. Invasive extraintestinal pathogenic E. coli disease is an infection caused by E. coli strains that normally live harmlessly in the gut but become pathogenic when they reach normally sterile body sites. These strains can invade the bloodstream or deep tissues, producing illnesses such as bacteremia, sepsis, meningitis, or severe urinary tract–related infections. The proposed term will be modified and added as LLT Invasive extraintestinal pathogenic E. coli disease infection to PT Escherichia infection.

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Blood infection*	Rejected		
To PT	*Haematological infection*			

MSSO Comment: The proposal to add a new LLT Blood infection to PT Haematological infection is not approved. The proposed concept may be represented by existing LLT Bloodstream infection, which means an infection of blood caused by blood-borne pathogens.

CR Number: 2025325003 **Implementation Date:** 01-Dec-25 Related CR: 2025325003

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Periungual fibroma*	Approved as Requested	Proposed LLT		
To PT	*Tuberous sclerosis complex*		*Periungual fibroma*	10093321	Current
			To PT		
			Tuberous sclerosis complex	10080584	

MSSO Comment: The proposal to add a new LLT Periungual fibroma to PT Tuberous sclerosis complex is approved as requested. Periungual fibroma is a smooth, firm, protruding nodule on a nail fold and is also known as Koenen tumor; is histologically a angiofibroma, and is considered to be pathognomonic of tuberous sclerosis complex.

CR Number: 2025325004 **Implementation Date:** 01-Dec-25 Related CR: 2025325004

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Subungual fibromas*	Approved Not as Requested	Proposed LLT		
To PT	*Tuberous sclerosis complex*		*Subungual fibroma*	10093322	Current
			To PT		
			Tuberous sclerosis complex	10080584	

MSSO Comment: The proposal to add a new LLT Subungual fibromas to PT Tuberous sclerosis complex is approved but not as requested. Benign fibrous tumors located beneath the nail plate, within the nail bed. They can cause nail elevation, ridging, or deformation as they grow. Histologically, they are the same type of lesion as periungual fibromas but in a deeper location. The proposed concept will be modified into the singular form and added as LLT Subungual fibroma to PT Tuberous sclerosis complex.

Detail Report

CR Number: 2025325005 **Implementation Date:** 01-Dec-25 Related CR: 2025325005

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*CT angiography*	Rejected		
From PT	*Angiogram*			
To PT	*Computerised tomogram*			

MSSO Comment: The proposal to move the LLT CT angiography from PT Angiogram to PT Computerised tomogram is not approved. A CT angiography (CTA) is a specific type of CT with contrast, designed to visualize arteries and veins. The body site specific terms link to the CT (body site) specific PT as the broader CT of the body site also showed the angiogram of the site, whereas, the non-specific LLT CT angiography is appropriately linked to the unqualified PT Angiogram and any changes would impact legacy data.

CR Number: 2025325006 **Implementation Date:** 01-Dec-25 Related CR: 2025325006

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*CT angiography neck*	Approved as Requested	Proposed LLT		
From PT	*Arteriogram carotid*		*CT angiography neck*	10089571	Current
To PT	*Computerised tomogram neck*		From PT		
			Arteriogram carotid	10003194	
			To PT		
			Computerised tomogram neck	10082961	

MSSO Comment: The proposal to move the LLT CT angiography neck from PT Arteriogram carotid to PT Computerised tomogram neck is approved as requested. For better alignment with related concepts, the body site specific term will be linked to the CT (body site) specific PT as the broader CT of the body site also show the angiogram of the site. Furthermore, the angiography of neck is a broader concept and includes more than the carotid artery. In a related change, LLT Computed tomogram angiography neck will also be moved from PT Arteriogram carotid to PT Computerised tomogram neck for better alignment. Additionally, LLT Magnetic resonance angiography neck and LLT MR angiography neck will both be moved from PT Arteriogram carotid to PT Magnetic resonance imaging neck.

CR Number: 2025325009 **Implementation Date:** 01-Dec-25 Related CR: 2025325009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Hereditary gene mutation*	Rejected		
HLT primary	*Gene mutations and other alterations NEC*			
SOC primary	*Congenital, familial and genetic disorders*			

MSSO Comment: The proposal to add a new PT Hereditary gene mutation to primary HLT Gene mutations and other alterations NEC in SOC Congenital, familial and genetic disorders is not approved. Generally, gene mutations are understood to be hereditary and in MedDRA the most common concept is unqualified, whereas the parallel form of the concept is added in qualified form such as LLT/PT Acquired gene mutation.

CR Number: 2025325010 **Implementation Date:** 01-Dec-25 Related CR: 2025325010

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Chronic pain syndrome*	Rejected		

MSSO Comment: The proposal to add a new PT Chronic pain syndrome is not approved. Chronic pain syndrome (CPS) is a poorly defined condition, CPS is just a constellation of symptoms of pain which lasts more than 6 months. Most references consider ongoing pain lasting longer than 6 months as diagnostic, and others have used 3 months as the minimum criterion.

CR Number: 2025325011 **Implementation Date:** 01-Dec-25 Related CR: 2025325011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Mechanical insufflation-exsufflation*	Approved Not as Requested	Proposed LLT		
			Mechanical insufflation-exsufflation therapy	10093323	Current
			To PT		
			Airway secretion clearance therapy	10074363	

MSSO Comment: The proposal to add a new PT Mechanical insufflation-exsufflation is approved but not as requested. Mechanical insufflation-exsufflation devices simulate a cough and assist airway mucus clearance. The device is used with patients with neuromuscular disease and muscle weakness due to central nervous system injury. The device gradually inflates the lungs (insufflation), followed by an immediate and abrupt change to negative pressure, which produces a rapid exhalation (exsufflation), which simulates a cough. Proposed term will be modified for clarity and added as LLT Mechanical insufflation-exsufflation therapy to PT Airway secretion clearance therapy.

MSSO Comment: The proposal to add PT High grade serous ovarian carcinoma to Ovarian malignant tumours (SMQ) as a Narrow term is approved as requested. High-grade serous ovarian carcinoma (HGSOC) is an aggressive epithelial ovarian cancer that most often arises from the fallopian tube epithelium and is characterized by TP53 mutations and genomic instability. It typically presents at an advanced stage. It is considered a distinct tumor type from low-grade serous ovarian carcinoma rather than a spectrum, because they have different origins, as well as different morphology and molecular and genetic signatures. The term matches the inclusion criteria of the SMQ and will be added to the narrow scope.

			0	

MSSO Comment: The proposal to add PT High grade serous ovarian carcinoma to Uterine and fallopian tube malignant tumours (SMQ) as a Broad term is approved as requested. High-grade serous ovarian carcinoma (HGSOC) is an aggressive epithelial ovarian cancer that most often arises from the fallopian tube epithelium and is characterized by TP53 mutations and genomic instability. It typically presents at an advanced stage. It is considered a distinct tumor type from low-grade serous ovarian carcinoma rather than a spectrum, because they have different origins, as well as different morphology and molecular and genetic signatures. As a term for a tubo-ovarian carcinoma without specific mention of the fallopian tube, the term will be added to the broad scope of the SMQ.

CR Number: 2025325029 **Implementation Date:** 25-Nov-25 Related CR: 2025325029

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #

			Term_weight	
			0	

MSSO Comment: The proposal to add PT Natural killer/T-cell lymphoma to Haematological malignant tumours (SMQ) as a Narrow term is approved as requested. NK/T-cell lymphoma is an aggressive type of non-Hodgkin lymphoma that arises from natural killer (NK) cells or, less commonly, cytotoxic T cells. It most often involves the nasal cavity and upper aerodigestive tract and is strongly associated with Epstein–Barr virus (EBV) infection. The term matches the inclusion criteria of the SMQ which only has narrow search terms.

Detail Report

MSSO Comment: The proposal to add PT Histotripsy to Malignancy related therapeutic and diagnostic procedures (SMQ) as a Narrow term is approved as requested. Histotripsy is the first noninvasive, non-ionizing, and non-thermal ablation technology guided by real-time imaging. Using focused ultrasound delivered from outside the body, histotripsy mechanically destroys tissue through cavitation, rendering the target into acellular debris. Its main indication are liver tumors, but it is also investigated in other solid tumors and some non-tumor indications. The term fits the inclusion criteria and will be added to the SMQ which only includes narrow search terms.

MSSO Comment: The proposal to add PT Ocular drug delivery device placement to Glaucoma (SMQ) as a Broad term is approved as requested. Ocular drug-delivery devices, such as sustained-release inserts, implants, and punctal plugs, aim to improve medication penetration and maintain therapeutic drug levels in the eye over time while reducing dosing frequency. In glaucoma, these devices can enhance intraocular pressure control and improve adherence compared with traditional eye drops, potentially slowing disease progression. The term matches the inclusion criteria and will be added to the broad scope of the SMQ, as it is a broad treatment description which is not specific to glaucoma.

Detail Report

			Retinal disorders (SMQ)	20000158
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Ocular drug delivery device placement to Retinal disorders (SMQ) as a Broad term is approved as requested. Ocular drug delivery in retinal disorders often relies on intravitreal injections, implants, or sustained-release systems to directly target the posterior segment and overcome the blood-retinal barrier. These approaches enable precise, long-lasting treatment of conditions like age-related macular degeneration and diabetic retinopathy, reducing the need for frequent injections and improving patient outcomes. The term will be added aligned with other therapeutic terms although not specifically mentioned in the inclusion criteria of the SMQ. The term will be added to the broad scope, as it is not specific to retinal treatments.

MSSO Comment: The proposal to add PT Ocular drug delivery device placement to Lens disorders (SMQ) as a Broad term is approved as requested. Ocular drug delivery for lens disorders, such as cataracts, is being explored through nanoparticle-based systems, eye drops, and injectable formulations to deliver antioxidants or anti-cataract agents directly to the lens. These targeted approaches aim to slow lens opacity progression and improve lens transparency while minimizing systemic side effects. The term matches the inclusion criteria for therapeutic interventions and will be added to the broad scope of the SMQ, as it is not specific for lens disorders.

			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Carotid artery pseudoaneurysm to Conditions associated with central nervous system haemorrhages and cerebrovascular accidents (SMQ) as a Narrow term is approved as requested. A pseudoaneuyrsm of the carotid artery is a contained rupture of the carotid arterial wall in which blood collects between vessel layers or in the surrounding tissue, forming a sac that communicates with the arterial lumen. Unlike a true aneurysm, it does not involve all three layers of the arterial wall. These are significant lesions because, when they occur in an intracranial segment of the carotid artery, there is a risk for complete rupture of the vessel wall resulting in a parenchymal brain hemorrhage. Because of the significant neurologic impairment associated with intraparenchymal hemorrhage, this term will be added to the narrow terms of this SMQ.

			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Cholecystokinin-cholescintigraphy to Biliary system related investigations, signs and symptoms (SMQ) as a Narrow term is approved as requested. Cholecystokinin-cholescintigraphy is the gold standard test for evaluating patients for obstructive cholecystitis or biliary dyskinesia. The finding of an abnormal gallbladder ejection fraction could signal the presence of an array of disease entities, including biliary dyskinesia, chronic or acute cholecystitis, and bile sludging. Cholecystokinin-cholescintigraphy is a highly specific investigation in the diagnosis of conditions Cholelithiasis obstructive and Biliary dyskinesia, both in the narrow scope of the neighboring Gallbladder related disorders (SMQ). Like several other highly specific terms under the HLT Hepatobiliary imaging procedures included in this Biliary system related investigations, signs and symptoms (SMQ), Cholecystokinin-cholescintigraphy will be added to the narrow scope.

			Retroperitoneal fibrosis (SMQ)	20000065
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Flank discomfort to Retroperitoneal fibrosis (SMQ) as a Broad term is approved as requested. The most common presenting symptom of retroperitoneal fibrosis is relatively vague discomfort, typically described as dull pain in the abdomen, back, inguinal, or flank areas, affecting over 90% of patients. The PT Flank discomfort will be added as a Broad term to this SMQ, similar to the existing PT Flank pain that is already included in the broad scope.

CR Number: 2025325056 **Implementation Date:** 25-Nov-25 Related CR: 2025325056

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Dysmorphic urinary red blood cells*	Approved as Requested	Proposed PT	
To SMQ	*Systemic lupus erythematosus (SMQ)*		*Dysmorphic urinary red blood cells*	10093138

			Systemic lupus erythematosus (SMQ)	20000045
			Term scope	
			Broad	
			Term_category	
			F	
			Term_weight	
			1	

MSSO Comment: The proposal to add PT Dysmorphic urinary red blood cells to Systemic lupus erythematosus (SMQ) as a Broad term is approved as requested. Most patients with systemic lupus erythematosus (SLE) will have clinical evidence of kidney disease, usually an abnormal urinalysis, at some point in the course of their disease. Lupus nephritis (LN) is a severe manifestation of SLE and typically develops early in the disease course. Clinically evident kidney disease eventually occurs in up to one-half of patients with SLE, and up to 10 percent of patients with LN will develop end-stage kidney disease. The presence of lupus nephritis should be suspected in patients with known SLE who develop an active urinary sediment with persistent hematuria (five or more red blood cells, most of which are dysmorphic). The PT Dysmorphic urinary red blood cells will be added as a Broad term under Category F (Renal disorder), Term Weight 1, similar to existing PTs such as Protein urine present and Urinary casts present.

			Myocardial infarction (SMQ)	20000047
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Creatine kinase MB abnormal to Myocardial infarction (SMQ) as a Narrow term is approved as requested. PT Creatine kinase MB abnormal will be added to the narrow scope of this SMQ similar to the previous PT-level term which has now been demoted LLT Blood creatine phosphokinase MB abnormal. Creatine kinase (CK) and its MB isoenzyme (CK-MB) were the most commonly used serologic tests for the diagnosis of myocardial infarction prior to the widespread adoption of troponin.

			Myocardial infarction (SMQ)	20000047
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Post-cardiac injury syndrome to Myocardial infarction (SMQ) as a Broad term is approved as requested. The term post-cardiac injury syndrome encompasses a group of pericardial inflammatory syndromes that occur after injury to the myocardium, pericardium, or both. This syndrome includes Dressler's syndrome (after myocardial infarction), post-pericardiotomy syndrome (after cardiac surgery), and other forms of pericarditis secondary to cardiac trauma or invasive procedures. Since this could occur outside the setting of myocardial infarction, this will be added to the SMQ as a broad term.

MSSO Comment: The proposal to add PT Pulmonary artery filling defect to Embolic and thrombotic events, venous (SMQ) as a Narrow term is approved as requested. This term fits the inclusion criteria for investigation terms related to embolism and thrombosis. A pulmonary artery filling defect seen on imaging (like CT pulmonary angiography) typically represents a pulmonary embolism, which is part of venous thromboembolism (VTE). Related PT Pulmonary embolism is already included in this SMQ.

Detail Report

CR Number: 2025328000 **Implementation Date:** 01-Dec-25 Related CR: 2025328000

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Hepatic venous aneurysm*	Rejected		

MSSO Comment: The proposal to add a new PT Hepatic venous aneurysm is not approved. Most splanchnic venous aneurysms arise in the portal region (≈70–80%). Visceral sites (superior mesenteric, splenic, gastric) are far less common (≈10–20%). Intrahepatic hepatic-vein aneurysms are rare (<5%), and suprahepatic ones at the hepatic-vein/inferior vena cava confluence are exceptional (<1–2%). Hepatic venous aneurysm is a concept which represents an unspecific anatomic location, for other venous aneurysms terms, these usually relate to a specific vein, and not all the venous vessels in an organ.

CR Number: 2025328001 **Implementation Date:** 01-Dec-25 Related CR: 2025328001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Hyperbileacidemia*	Rejected		

MSSO Comment: The proposal to add a new term Hyperbileacidemia is not approved. Hyperbileacidemia is not a standard medical term in English. The concept is usually expressed in English as elevated bile acids, or when referring to a disorder as cholestasis or other specific disorder of bile metabolism.

CR Number: 2025328002 **Implementation Date:** 25-Nov-25 Related CR: 2025328002

Proposed PT	*Visual perceptual alteration*	Approved Not as Requested After Suspension	Proposed LLT		
HLT primary	*Perception disturbances NEC*		*Visual perceptual alteration*	10093381	Current
SOC primary	*Psychiatric disorders*		To PT		
			Perceptual disturbance	10034378	

MSSO Comment: The proposal to add a new PT Visual perceptual alteration to primary HLT Perception disturbances NEC in SOC Psychiatric disorders is approved but not as requested after suspension. Visual perceptual alteration is a type of perceptual disturbance. After reconsideration, the MSSO views perceptual disturbance as a broader and more inclusive concept than illusion or hallucination, because it captures alterations in perception that do not require misinterpretation of an external stimulus (illusion) and do not involve perceiving something that is not present (hallucinations). It includes changes in intensity, quality, or form of sensory experience—such as distortions, intensifications, and qualitative shifts—that are common in psychedelic states and other non-pathological conditions. Visual perceptual alteration will be added as a sub-concept LLT to the newly promoted PT Perceptual disturbance. In a related change, the LLT Perceptual disturbance will be promoted from PT Illusion to the HLT Perception disturbances NEC. Furthermore, the LLT Perceptual distortion and LLT Perceptual distortions will both be moved from PT Illusion to new PT Perceptual disturbance.

Change Requested	Demote a PT	Final Disposition	Final Placement	MedDRA Code #
PT to merge	*Increased dose administered*	Rejected		
To PT	*Incorrect dose administered*			

MSSO Comment: The proposal to demote the PT Increased dose administered under PT Incorrect dose administered is not approved. Administration of an increased dose can be in error or intentional and does not imply that an incorrect dose was administered. Please consider defining in your companies' data entry and coding conventions, whether information on a therapy change will need to be recorded in a different manner in separate data fields (similar to the principles for death, hospitalization etc.).

CR Number: 2025329011 **Implementation Date:** 01-Dec-25 Related CR: 2025329011

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Papillary thyroid microcarcinoma*	Approved as Requested	Proposed LLT	
			Papillary thyroid microcarcinoma	10093325 Current
			To PT	
			Papillary thyroid cancer	10033701

MSSO Comment: The proposal to add a new term Papillary thyroid microcarcinoma is approved as requested. Papillary thyroid microcarcinoma (PTMC) implies a papillary thyroid carcinoma of which maximal diameter is 10 mm or smaller. Not all PTMCs are classified as low-risk, because they sometimes have high-risk features. Papillary thyroid microcarcinoma will be added as LLT to PT Papillary thyroid cancer.

CR Number: 2025329012 **Implementation Date:** 01-Dec-25 Related CR: 2025329012

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Device migration NEC*	Rejected		
HLT primary	*Device issues NEC*			
SOC primary	*Product issues*			

MSSO Comment: The proposal to add a new PT Device migration NEC to primary HLT Device issues NEC in SOC Product issues is not approved. Generally, MedDRA does not add terms ending in NEC at PT level. Also, the concepts are closely related and do not each warrant PT level as this may cause signal dispersion.

Detail Report

CR Number: 2025330000 **Implementation Date:** 01-Dec-25 Related CR: 2025330000

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Intrapulmonary shunt*	Rejected		
From PT	*Ventilation perfusion mismatch*			

MSSO Comment: The proposal to promote the LLT Intrapulmonary shunt from PT Ventilation perfusion mismatch is not approved. Intrapulmonary shunt is a physiopathologic mechanism broadly used as a synonym of V/Q mismatch, not a distinct disease entity. It is a conceptual mechanism, and does not define a concrete structural modification. However, microvascular intrapulmonary shunt (i.e., microvascular pulmonary AVMs in hepatopulmonary syndrome) refers to a structural change based on microvascular dilatation not seen in imaging, but still leading to hypoxemia; it is therefore a diagnostic term based on (between many others) the "intrapulmonary shunting" pathophysiologic mechanism. Although the terms may sound similar, they are in fact different unique medical concepts.

CR Number: 2025330001 **Implementation Date:** 01-Dec-25 Related CR: 2025330001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Anaemia induced angina pectoris*	Rejected		

MSSO Comment: The proposal to add a new term Anaemia induced angina pectoris is not approved. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. When considering the addition of such combination terms, MedDRA generally attempts to limit inclusion to those terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Examples include terms such as diabetic retinopathy, hypertensive cardiomegaly and eosinophilic pneumonia.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Periappendicular abscess*	Approved Not as Requested	Proposed LLT		
			Periappendiceal abscess	10093326	Current
			To PT		
			Appendiceal abscess	10049764	

MSSO Comment: The proposal to add a new term Periappendicular abscess is approved but not as requested. A periappendiceal abscess is an intra-abdominal abscess near the vermiform appendix in perforating appendicitis. The proposed term will be modified to the standard and most widely used expression in English and added as LLT Periappendiceal abscess to PT Appendiceal abscess aligned with subordination of LLT Periappendictis to PT Appendicitis.

CR Number: 2025330009 **Implementation Date:** 02-Dec-25 Related CR: 2025330009

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Hyaline occlusive glomerular microangiopathy*	Approved Not as Requested	Proposed PT	
HLT primary	*Renal vascular disorders NEC*		*Hyaline occlusive glomerular microangiopathy*	10093335
SOC primary	*Vascular disorders*		HLT primary	
			Glomerulonephritis and nephrotic syndrome	10018365
			SOC primary	
			Renal and urinary disorders	10038359
			HLT secondary	
			Renal embolism and thrombosis	10038434
			SOC secondary	
			Vascular disorders	10047065

MSSO Comment: The proposal to add a new PT Hyaline occlusive glomerular microangiopathy to primary HLT Renal vascular disorders NEC in SOC Vascular disorders is approved but not as requested. Hyaline occlusive glomerular microangiopathy arises from endothelial leakage followed by subendothelial accumulation of serum proteins. The presumed mechanism is drug-induced injury to glomerular endothelial cells, leading to leakage of plasma proteins and gradual occlusion of capillaries, rather than a coagulation/thrombosis process, most frequently observed in patients treated with VEGF/VEGFR inhibitors. Hyaline occlusive glomerular microangiopathy will be added as new PT to primary HLT Glomerulonephritis and nephrotic syndrome and secondary HLT Renal embolism and thrombosis.

CR Number: 2025330010 **Implementation Date:** 02-Dec-25 Related CR: 2025330010

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Intraocular pressure increased post injection*	Rejected		

MSSO Comment: The proposal to add a new PT Intraocular pressure increased post injection is not approved. The injection time point and intraocular pressure increase time point can be captured in different database fields and used in assessment. Alternatively, the proposed concept may be captured with existing LLT Post injection phenomenon and LLT Intraocular pressure increased. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding the coding of combination terms.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Medication re-dose*	Rejected		

MSSO Comment: The proposal to add a new PT Medication re-dose is not approved. A medication re-dose generally means giving an additional dose of a drug after an initial dose has already been administered. It is not a formally standardized medical term and can be ambiguous unless context is provided. Because the term varies by specialty and situation, without additional details, “re-dose” can be ambiguous.

CR Number: 2025330015 **Implementation Date:** 01-Dec-25 Related CR: 2025330015

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Concomitant medication advice error*	Rejected		

MSSO Comment: The proposal to add a new PT Concomitant medication advice error is not approved. MedDRA terms are generally not specific to certain drugs or therapies. For the described scenario, consider existing terms such as LLT/PT Duplicate therapy issue (recently added) or LLT/PT Duplicate therapy error, as well as LLT/PT Deprescribing error depending on your scenario.

Proposed Term	*Vulvoplasty*	Approved as Requested	Proposed PT	
			Vulvoplasty	10093336
			HLT primary	
			External female genital therapeutic procedures	10015738
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Vulvoplasty is approved as requested. Vulvoplasty is a surgical procedure involving the reconstruction or modification of the vulva, which is the external female genitalia, including the labia majora, labia minora, clitoris, and surrounding tissues. The goal of vulvoplasty can vary, ranging from reconstructions of traumatic or congenital anomalies to aesthetic considerations as well as gender-affirming surgery. Vulvoplasty will be added as PT to HLT External female genital therapeutic procedures.

Proposed Term	*Vvi pacemaker*	Approved Not as Requested	Proposed LLT		
			VVI pacemaker generated rhythm	10093337	Current
			To PT		
			Pacemaker generated rhythm	10059831	

MSSO Comment: The proposal to add a new term Vvi pacemaker is approved but not as requested. VVI pacemaker rhythm refers to a pacemaker generated rhythm, which paces the ventricles, senses in the ventricle and in which a sensed event inhibits the output pulse and causes the pacemaker to recycle for one or more timing cycles. The proposed term will be modified for capitalization and clarity and added as LLT VVI pacemaker generated rhythm to PT Pacemaker generated rhythm as one of the most common pacemaker generated rhythms.

CR Number: 2025331004 **Implementation Date:** 02-Dec-25 Related CR: 2025331004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Post traumatic vision syndrome*	Rejected		

MSSO Comment: The proposal to add a new term Post traumatic vision syndrome is not approved. The proposed term is rarely found in recent medical literature and although visual dysfunction is described as a consequence of traumatic brain injury, concussion, or stroke, this syndrome is not a fully standardized, universally accepted diagnostic entity. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. When considering the addition of such combination terms, MedDRA generally attempts to limit inclusion to those terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Examples include terms such as diabetic retinopathy, hypertensive cardiomegaly and eosinophilic pneumonia.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Post traumatic tremor syndrome*	Rejected		

MSSO Comment: The proposal to add a new term Post traumatic tremor syndrome is not approved. There is clear and consistent scientific evidence that brain trauma can lead to tremor (postural, kinetic, resting, intention, or mixed), sometimes with delayed onset. However, “post-traumatic tremor” is not an internationally standardized diagnostic syndrome. The proposed term combines a medical concept with additional medical wording related to etiology and/or pathophysiology. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance. When considering the addition of such combination terms, MedDRA generally attempts to limit inclusion to those terms which describe important, distinct and robust medical concepts which are internationally recognized diagnostic entities. Examples include terms such as diabetic retinopathy, hypertensive cardiomegaly and eosinophilic pneumonia.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Bacterospermia*	Approved as Requested	Proposed PT	
			Bacterospermia	10093338
			HLT primary	
			Bacterial infections NEC	10004047
			SOC primary	
			Infections and infestations	10021881
			HLT secondary	
			Spermatogenesis and semen disorders	10013358
			SOC secondary	
			Reproductive system and breast disorders	10038604

MSSO Comment: The proposal to add a new term Bacterospermia is approved as requested. Bacteriospermia is the presence of bacteria in semen, which can be a sign of an infection in the male urogenital tract and is clinically diagnosed when bacteria exceed 1,000 colony-forming units (CFU/mL). It can negatively impact male fertility by causing issues like reduced sperm motility, increased DNA damage, and poor morphology. Bacterospermia will be added as PT with a primary link to HLT Bacterial infections NEC and a secondary link to HLT Spermatogenesis and semen disorders.

			Product ineffective for unapproved use	10093362	

MSSO Comment:

Detail Report

CR Number: 2025331022 **Implementation Date:** 04-Dec-25 Related CR: 2025331022

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Drug ineffective in unapproved use*	Rejected		

MSSO Comment: The proposal to add a new LLT Drug ineffective in unapproved use is not approved. The proposed concept was modified and added as LLT Drug ineffective for unapproved use in change request 2025331021.

CR Number: 2025331023 **Implementation Date:** 02-Dec-25 Related CR: 2025331023

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Suspected infection*	Rejected		

MSSO Comment: The proposal to add a new PT Suspected infection is not approved. Aside from a few terms of particular interest in pharmacovigilance, MedDRA does not add terms representing conditions not yet confirmed. Please reference section 3.1 Definitive and Provisional Diagnoses with or without Signs and Symptoms of the Term Selection Points to Consider document, in which the preferred option for a provisional diagnosis is to select a term for the diagnosis, i.e. in this case, LLT Infection.

CR Number: 2025332000 **Implementation Date:** 03-Dec-25 Related CR: 2025332000

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Device positioned inappropriately*	Approved as Requested	Proposed LLT		
From PT	*Device placement error*		*Device positioned inappropriately*	10070695	Current
To PT	*Device placement issue*		From PT		
			Device placement error	10092959	
			To PT		
			Device placement issue	10083995	

MSSO Comment: The proposal to move the LLT Device positioned inappropriately from PT Device placement error to PT Device placement issue is approved as requested. LLT Device positioned inappropriately will be moved from PT Device placement error to PT Device placement issue as the term name is not indicating an error.

Detail Report

CR Number: 2025332001 **Implementation Date:** 03-Dec-25 Related CR: 2025332001

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Post-SSRI Sexual Dysfunction*	Rejected		
From PT	*Sexual dysfunction*			

MSSO Comment: The proposal to promote the LLT Post-SSRI Sexual Dysfunction from PT Sexual dysfunction is not approved. MedDRA generally avoids medication-class–specific terminology, and when such terms are included, they are generally added at the LLT level. The wide range of symptoms attributed to post-SSRI sexual dysfunction (PSSD) is already more effectively captured through the Sexual dysfunction SMQ, which provides a more comprehensive search strategy than a single term. Moreover, if this specific concept is considered essential for analysis, it remains fully accessible by querying the LLT directly, without altering current hierarchy. Finally, although persistent sexual symptoms after SSRI use are recognized, PSSD itself remains under investigation, lacking a definitive clinical definition or consensus, making its promotion premature, if ever indicated.

CR Number: 2025332002 **Implementation Date:** 03-Dec-25 Related CR: 2025332002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Celotomy*	Rejected		

MSSO Comment: The proposal to add a new LLT Celotomy is not approved. The proposed term is an outdated term, which based on its linguistic closeness to celiotomy is ambiguous.

CR Number: 2025332003 **Implementation Date:** 02-Dec-25 Related CR: 2025332003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Omphaloliths*	Approved Not as Requested	Proposed LLT	
			Omphalolith	10093340 Current
			To PT	
			Omphalith	10087339

MSSO Comment: The proposal to add a new term Omphaloliths is approved but not as requested. An omphalolith, also known as a umbolith, omphalith, navel stone, or umbilical concretion is a periumbilical mass that may form due to the accumulation of sebum and keratin. Proposed term will be modified to represent the singular form and added as synonym LLT Omphalolith to PT Omphalith.

Detail Report

CR Number: 2025332004 **Implementation Date:** 02-Dec-25 Related CR: 2025332004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Acute sore throat*	Rejected		

MSSO Comment: The proposal to add a new term Acute sore throat is not approved. It is not possible to add all "acute" forms of conditions in MedDRA unless the concept is uniquely distinctive from the baseline condition.

CR Number: 2025332005 **Implementation Date:** 02-Dec-25 Related CR: 2025332005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Perirenal fluid effusion*	Rejected		

MSSO Comment: The proposal to add a new term Perirenal fluid effusion is not approved. The proposed concept may be represented by existing LLT Perinephric effusion under PT Perinephric collection.

CR Number: 2025332006 **Implementation Date:** 04-Dec-25 Related CR: 2025332006

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Pachychoroid pigment epitheliopathy*	Approved Not as Requested	Proposed PT	
			Pachychoroid pigment epitheliopathy	10093364
			HLT primary	
			Retinopathies NEC	10038932
			SOC primary	
			Eye disorders	10015919

MSSO Comment: The proposal to add a new LLT Pachychoroid pigment epitheliopathy is approved but not as requested. Pachychoroid Pigment Epitheliopathy is a condition characterized by a thickened, hyperpermeable choroid and mild alterations of the retinal pigment epithelium without subretinal fluid. It is considered the earliest stage of the pachychoroid spectrum and can progress to central serous chorioretinopathy, in which dysfunction of the retinal pigment epithelium leads to fluid leakage and serous retinal detachment. Like existing related PT Central serous chorioretinopathy, Pachychoroid pigment epitheliopathy will be added as PT to the HLT Retinopathies NEC.

Detail Report

CR Number: 2025332007 **Implementation Date:** 02-Dec-25 Related CR: 2025332007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Bone marrow lesion*	Rejected		

MSSO Comment: The proposal to add a new term Bone marrow lesion is not approved. MedDRA generally tries to limit the inclusion of further "lesion" terms, as a broad “lesion” term only adds an additional imprecise term to existing “disorder” concepts.

CR Number: 2025332008 **Implementation Date:** 02-Dec-25 Related CR: 2025332008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Humerus head fracture*	Approved Not as Requested	Proposed LLT		
			Head of humerus fracture	10093341	Current
			To PT		
			Humerus fracture	10020462	

MSSO Comment: The proposal to add a new term Humerus head fracture is approved but not as requested. A humerus head fracture, also known as a proximal humerus fracture, occurs at the upper part of the humerus bone near the shoulder. This type of fracture is commonly caused by falls, particularly when falling onto an outstretched hand, and is more prevalent in older adults with osteoporotic bones. The proposed term will be modified to represent the form most commonly found in literature and added as LLT Head of humerus fracture to PT Humerus fracture.

CR Number: 2025332009 **Implementation Date:** 02-Dec-25 Related CR: 2025332009

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Alcohol steatofibrosis*	Rejected		

MSSO Comment: The proposal to add a new term Alcohol steatofibrosis is not approved. MedDRA cannot accommodate terms with several qualifiers. Important combination concepts as LLT/PT Fatty liver alcoholic are included in MedDRA, but a further combination with all possible subtypes is not possible. Please refer to Section 3.5 of the MedDRA Term Selection: Points to Consider Document regarding coding approaches/considerations.

Detail Report

CR Number: 2025332010 **Implementation Date:** 02-Dec-25 Related CR: 2025332010

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Coronary thrombectomy*	Approved Not as Requested	Proposed PT	
			Coronary artery thrombectomy	10093342
			HLT primary	
			Arterial therapeutic procedures (excl aortic)	10003167
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Coronary thrombectomy is approved but not as requested. A coronary thrombectomy is a procedure that is performed to remove a blood clot from the coronary arteries. Proposed term will be modified for better alignment and added as PT Coronary artery thrombectomy to HLT Arterial therapeutic procedures (excl aortic).

CR Number: 2025332011 **Implementation Date:** 03-Dec-25 Related CR: 2025332011

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Atrial electromechanical dissociation*	Approved as Requested	Proposed PT	
HLT primary	*Supraventricular arrhythmias*		*Atrial electromechanical dissociation*	10093358
SOC primary	*Cardiac disorders*		HLT primary	
			Supraventricular arrhythmias	10042600
			SOC primary	
			Cardiac disorders	10007541

MSSO Comment: The proposal to add a new PT Atrial electromechanical dissociation to primary HLT Supraventricular arrhythmias in SOC Cardiac disorders is approved as requested. Atrial electromechanical dissociation is a phenomenon where the atria show electrical activity (e.g., P waves or atrial depolarization) but fail to contract mechanically.

CR Number: 2025333000 **Implementation Date:** 04-Dec-25 Related CR: 2025333000

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pharyngeal lesion excision*	Rejected		

MSSO Comment: The proposal to add a new term Pharyngeal lesion excision is not approved. The proposed concept is a non-specific vague term. Please provide the specific need and context for the use of this term.

Detail Report

CR Number: 2025333001 **Implementation Date:** 04-Dec-25 Related CR: 2025333001

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Nose lesion excision*	Rejected		

MSSO Comment: The proposal to add a new term Nose lesion excision is not approved. The proposed concept is a non-specific vague term. Please provide the specific need and context for the use of this term. Please consider LLT/PT External nose lesion excision for your coding needs.

CR Number: 2025333002 **Implementation Date:** 04-Dec-25 Related CR: 2025333002

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Urine sperm*	Approved Not as Requested	Proposed PT	
			Post-ejaculation urinalysis	10093367
			HLT primary	
			Fertility analyses and other reproductive function procedures	10088575
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term Urine sperm is approved but not as requested. A post-ejaculatory urinalysis is a test in which a person urinates immediately after ejaculating so the urine can be examined under a microscope for sperm. It is mainly used to diagnose retrograde ejaculation or investigate certain fertility issues. The proposed term will be modified to the most common clinical description and added as PT Post-ejaculation urinalysis to HLT Fertility analyses and other reproductive function procedures.

CR Number: 2025333003 **Implementation Date:** 04-Dec-25 Related CR: 2025333003

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Intraoperative movement*	Rejected		

MSSO Comment: The proposal to add a new term Intraoperative movement is not approved. “Intraoperative movement” is a descriptive term used in anesthesia and surgery, but it is not a formally defined, clear concept, as it lacks standardization with respect to the type and severity of movement and has a variety of heterogenous causes. The term is inherently ambiguous, context-dependent, and multifactorial. Please consider existing MedDRA terms for your coding scenario or resubmit with a clear justification on the need of the term supported by medical references.

Detail Report

CR Number: 2025333004 **Implementation Date:** 04-Dec-25 Related CR: 2025333004

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Red cell distribution width coefficient of variation*	Approved as Requested	Proposed LLT		
			Red cell distribution width coefficient of variation	10093370	Current
			To PT		
			Red cell distribution width	10051168	

MSSO Comment: The proposal to add a new term Red cell distribution width coefficient of variation is approved as requested. Red cell distribution width coefficient of variation (RDW-CV) is the red cell distribution width expressed as a percentage of the mean corpuscular volume (MCV), reflecting the relative variation in red blood cell sizes. Unlike red cell distribution width standard deviation, which gives the absolute spread in femtoliters, RDW-CV normalizes this variation to the average cell size, allowing comparison across different MCVs. Red cell distribution width coefficient of variation will be added as LLT to PT Red cell distribution width.

CR Number: 2025333005 **Implementation Date:** 04-Dec-25 Related CR: 2025333005

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Red cell distribution width standard deviation*	Approved as Requested	Proposed LLT		
			Red cell distribution width standard deviation	10093372	Current
			To PT		
			Red cell distribution width	10051168	

MSSO Comment: The proposal to add a new term Red cell distribution width standard deviation is approved as requested. Red cell distribution width standard deviation measures the absolute variation in red blood cell sizes in femtoliters, reflecting the width of the red blood cell (RBC) size distribution. Unlike Red cell distribution width coefficient of variation, it is independent of the mean cell size and directly shows how much RBC sizes differ from each other. Red cell distribution width standard deviation will be added as LLT to PT Red cell distribution width.

CR Number: 2025333006 **Implementation Date:** 04-Dec-25 Related CR: 2025333006

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Posterior cruciate ligament reconstruction*	Approved as Requested	Proposed LLT		
			Posterior cruciate ligament reconstruction	10093373	Current
			To PT		
			Ligament operation	10065122	

MSSO Comment: The proposal to add a new term Posterior cruciate ligament reconstruction is approved as requested. Posterior cruciate ligament (PCL) reconstruction is surgery to rebuild a PCL in the knee. PCL tears occur due to trauma, such as automobile accidents, or falling on the knee when bent. They are common sports-related injuries and usually cause severe pain and disability. Posterior cruciate ligament reconstruction will be added as LLT to PT Ligament operation aligned with LLT Anterior cruciate ligament reconstruction.

Detail Report

CR Number: 2025333007 **Implementation Date:** 04-Dec-25 Related CR: 2025333007

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Fallopian tube calculus*	Rejected		

MSSO Comment: The proposal to add a new term Fallopian tube calculus is not approved. The proposed concept is rarely found in medical literature as a defined concept. Please resubmit with valid medical references and specific need for the term.

CR Number: 2025333008 **Implementation Date:** 04-Dec-25 Related CR: 2025333008

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Lateral pharyngeal wall suspension*	Approved as Requested	Proposed LLT	
			Lateral pharyngeal wall suspension	10093371 Current
			To PT	
			Pharyngeal reconstruction	10034833

MSSO Comment: The proposal to add a new term Lateral pharyngeal wall suspension is approved as requested. Lateral pharyngeal wall suspension manages obstructive sleep apnea through the myotomy and repositioning of the muscles of the lateral pharyngeal wall. Lateral pharyngeal wall suspension will be added as an LLT to PT Pharyngeal reconstruction aligned with LLT Pharyngoplasty.

CR Number: 2025333009 **Implementation Date:** 04-Dec-25 Related CR: 2025333009

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Recruitment maneuver*	Rejected		

MSSO Comment: The proposal to add a new term Recruitment maneuver is not approved. Recruitment maneuvers involve transient elevations in airway pressure applied during mechanical ventilation to open ('recruit') collapsed lung units and increase the number of alveoli participating in tidal ventilation. The concept is part of the many steps in mechanical ventilation and as such it is not possible to add all steps which are in a therapy.

CR Number: 2025333010 **Implementation Date:** 04-Dec-25 Related CR: 2025333010

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Plicationofsmallintestine*	Rejected		

MSSO Comment: The proposal to add a new term Plicationofsmallintestine is not approved. The proposed concept term, once corrected for spelling "Plication of small intestine" may be represented by existing LLT/PT Intestinal plication surgery.

CR Number: 2025333011 **Implementation Date:** 04-Dec-25 Related CR: 2025333011

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pituitary atrophy*	Rejected		

MSSO Comment: The proposal to add a new term Pituitary atrophy is not approved. The most common causes of shrinkage of the pituitary gland is hypopituitarism and as such, the signs and symptoms, lab hormone values are the primary factors that lead to a diagnosis. Please provide the specific context and need for the proposed concept, which is the morphological substrate of adeno-hypophysis shrinkage and subsequent hypofunction.

CR Number: 2025333012 **Implementation Date:** 04-Dec-25 Related CR: 2025333012

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Anterior vaginal wall prolapse*	Approved Not as Requested	Proposed LLT	
			Anterior vaginal prolapse	10093375 Current
			To PT	
			Vaginal prolapse	10046940

MSSO Comment: The proposal to add a new term Anterior vaginal wall prolapse is approved but not as requested. Anterior vaginal wall prolapse is commonly referred to as cystocele (protrusion of the bladder) or urethrocele (urethra). The proposed term will be modified to Anterior vaginal prolapse which is the most commonly referenced form in medical literature and added as LLT to the broad PT Vaginal prolapse.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Tinnitus cerebri*	Rejected		

MSSO Comment: The proposal to add a new term Tinnitus cerebri is not approved. Please resubmit with medical references describing the condition and your specific scenario in which you need the term.

CR Number: 2025333014 **Implementation Date:** 04-Dec-25 Related CR: 2025333014

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Respiratory tract obstruction*	Rejected		

MSSO Comment: The proposal to add a new term Respiratory tract obstruction is not approved. Please consider existing relevant concepts related to airway obstructions, e.g. LLT/PT Upper airway obstruction, LLT Respiratory obstruction unspecified, LLT Lower airway obstruction or other depending on your specific coding scenario.

CR Number: 2025333015 **Implementation Date:** 04-Dec-25 Related CR: 2025333015

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Ligament oedema*	Approved as Requested	Proposed PT	
			Ligament oedema	10093368
			HLT primary	
			Ligament disorders	10052774
			SOC primary	
			Musculoskeletal and connective tissue disorders	10028395

MSSO Comment: The proposal to add a new term Ligament oedema is approved as requested. Ligament edema refers to increased fluid content within a ligament, which makes it appear thickened and hyperintense on fluid-sensitive sequences on MRI. Ligament oedema will be added as a PT to HLT Ligament disorders. In a related change, the American English spelled counterpart LLT Ligament edema will be added to PT Ligament oedema.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Ear mass*	Rejected		

MSSO Comment: The proposal to add a new term Ear mass is not approved. “Mass” is an imprecise word, and terms containing this word will generally not be added into MedDRA when a more precise “disorder” terms exist (e.g., PT Ear disorder).

CR Number: 2025333017 **Implementation Date:** 04-Dec-25 Related CR: 2025333017

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Submandibular excision*	Rejected		

MSSO Comment: The proposal to add a new term Submandibular excision is not approved. The concept exists in LLT Submandibular gland excision. If this is not the intended request, please resubmit providing relevant scientific justification and medical references.

Detail Report

CR Number: 2025333018 **Implementation Date:** 04-Dec-25 Related CR: 2025333018

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*End-diastolic volume*	Approved Not as Requested	Proposed PT	
			Left ventricular end-diastolic volume	10093365
			HLT primary	
			Cardiac function diagnostic procedures	10007566
			SOC primary	
			Investigations	10022891

MSSO Comment: The proposal to add a new term End-diastolic volume is approved but not as requested. End Diastolic Volume (EDV) is the volume of blood in a ventricle at the end of diastole reflecting the maximum amount of blood the ventricle holds during the cardiac cycle, or pre-load. While left EDV is the major determinant of systemic stroke volume and cardiac output, the right EDV reflects pulmonary circulation. The proposed term will be modified for specificity and added as PT Left ventricular end-diastolic volume to HLT Cardiac function diagnostic procedures, to reflect the clinically most relevant form.

Proposed Term	*Breast lesion excision*	Approved as Requested	Proposed LLT	
			Breast lesion excision	10093374 Current
			To PT	
			Breast operation	10061734

MSSO Comment: The proposal to add a new term Breast lesion excision is approved as requested. Breast lesion excision refers broadly to the surgical removal of any abnormal area (lesion) in the breast, without specifying the nature, extent, or purpose of that removal. Breast lesion excision will be added as LLT to PT Breast operation.

CR Number: 2025333023 **Implementation Date:** 04-Dec-25 Related CR: 2025333023

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Subretinal injection*	Approved as Requested	Proposed PT	
			Subretinal injection	10093366
			HLT primary	
			Retinal therapeutic procedures	10038890
			SOC primary	
			Surgical and medical procedures	10042613

MSSO Comment: The proposal to add a new term Subretinal injection is approved as requested. Subretinal injection is a well-established and widely used technique consisting in the delivery of a substance (typically gene therapy vectors, stem cells, or drugs) into the potential space between the neurosensory retina and the retinal pigment epithelium. Subretinal injection will be added as PT to the HLT Retinal therapeutic procedures.

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Anti-treponema pallidum antibody*	Rejected		

MSSO Comment: The proposal to add a new term Anti-treponema pallidum antibody is not approved. The term Anti-treponema pallidum antibody refers nonspecifically to the antibodies detected by treponemal tests (FTA-ABS, TP-PA, EIA/CLIA). It describes the common target of all treponemal tests but is not associated with any specific technique. It can be represented by existing LLT Treponema pallidum antibody or LLT Treponema test.

CR Number: 2025333025 **Implementation Date:** 04-Dec-25 Related CR: 2025333025

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #	
Proposed Term	*Alveolar epithelial hyperplasia*	Approved Not as Requested	Proposed LLT		
			Pulmonary alveolar epithelial hyperplasia	10093369	Current
			To PT		
			Diffuse alveolar damage	10060902	

MSSO Comment: The proposal to add a new term Alveolar epithelial hyperplasia is approved but not as requested. Alveolar epithelial hyperplasia is a usual and standard descriptive term in pathology used to describe a reactive proliferation of type II pneumocytes in settings such as diffuse alveolar damage, interstitial lung diseases, organizing pneumonia, and peritumoral reactive changes. The proposed term will be modified for clarity and added as LLT Pulmonary alveolar epithelial hyperplasia to PT Diffuse alveolar damage.

CR Number: 2025333026 **Implementation Date:** 04-Dec-25 Related CR: 2025333026

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Pulmonary atypical hyperplasia*	Rejected		

MSSO Comment: The proposal to add a new term Pulmonary atypical hyperplasia is not approved. Pulmonary atypical hyperplasia is not a recognized diagnostic entity, but only an unspecific descriptive change that can reflect a wide range of reactive epithelial proliferations with an undefined degree of atypia. Its use carries a significant risk of confusion with atypical adenomatous hyperplasia (PT Pulmonary atypical adenomatous hyperplasia), which on the contrary is a well-defined preneoplastic lesion with established diagnostic criteria).

			To PT		
			Conversion disorder	10010893	

MSSO Comment: The proposal to demote the PT Neurologic somatic symptom disorder under PT Conversion disorder is approved as requested. Neurologic somatic symptom disorder is considered a synonym of PT Conversion disorder and therefore will be merged under PT Conversion disorder for better alignment.

CR Number: 2025333029 **Implementation Date:** 05-Dec-25 Related CR: 2025333029

Change Requested	Link (move) an LLT to another PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Abscess genital organ (male)*	Approved Not as Requested	PT to merge		
From PT	*Penile abscess*		*Penile abscess*	10034294	Current
To PT	*Genital abscess*		To PT		
			Genital abscess male	10093378	

MSSO Comment: The proposal to move the LLT Abscess genital organ (male) from PT Penile abscess to PT Genital abscess is approved but not as requested. PT Penile abscess will be demoted under new PT Genital abscess male to represent the broader concept on PT level. In a related change, new PT Genital abscess male will be linked to primary HLT Male reproductive tract infections and to secondary HLT Penile and scrotal infections and inflammations.

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #	
Proposed PT	*Distal symmetrical polyneuropathy*	Approved Not as Requested	Proposed LLT		
			Distal symmetrical polyneuropathy	10093360	Current
			To PT		
			Polyneuropathy	10036105	

MSSO Comment: The proposal to add a new PT Distal symmetrical polyneuropathy is approved but not as requested. Distal symmetrical polyneuropathy is a chronic length-dependent peripheral neuropathy characterized by symmetric involvement of the distal extremities, initially affecting sensory fibers and manifesting as paresthesia, dysesthesia, and loss of vibration and proprioception. As the disease progresses, motor fibers may become involved, resulting in distal weakness, atrophy, and hyporeflexia or areflexia. Distal symmetrical polyneuropathy will be added as an LLT to PT Polyneuropathy.

CR Number: 2025335002 **Implementation Date:** 04-Dec-25 Related CR: 2025335002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Maxillofacial cancer*	Rejected		

MSSO Comment: The proposal to add a new LLT Maxillofacial cancer is not approved. Maxillofacial cancer is a broad, descriptive term that encompasses multiple distinct malignancies rather than a single disease with specific histopathological or molecular characteristics. Each tumor within the maxillofacial region, such as squamous cell carcinoma, salivary gland tumors, or osteosarcoma, has unique etiology, behavior, and treatment protocols. Therefore, labeling a patient's condition simply as "maxillofacial cancer" is insufficient for diagnosis, prognosis, or management.

Detail Report

CR Number: 2025335016 **Implementation Date:** 05-Dec-25 Related CR: 2025335016

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Victim of bullying*	Approved as Requested	Proposed PT	
			Victim of bullying	10093377
			HLT primary	
			Crime victims	10047402
			SOC primary	
			Social circumstances	10041244

MSSO Comment: The proposal to add a new PT Victim of bullying is approved as requested. A victim of bullying is a person who is repeatedly subjected to intentional harm —physical, verbal, social, or psychological— from others who use greater power or influence to cause distress or harm. Victim of bullying will be added as PT to the HLT Crime victims.

CR Number: 2025335017 **Implementation Date:** 05-Dec-25 Related CR: 2025335017

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Precum decreased*	Rejected		

MSSO Comment: The proposal to add a new PT Precum decreased is not approved. The proposed term is a colloquialism not used in medicine and is difficult to translation in other languages. The term is used in the common English language to refer to pre-ejaculate secretions.

CR Number: 2025335018 **Implementation Date:** 05-Dec-25 Related CR: 2025335018

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Absence of pre-ejaculate*	Rejected		

MSSO Comment: The proposal to add a new PT Absence of pre-ejaculate is not approved. Although the decrease of pre-ejaculate may be of some interest as part of the evaluation of male infertility (due to a possible alteration in natural lubrication or problems in the Cowper gland) or in the context of sexual dysfunctions, it usually has no clinical significance. Please resubmit with context for use/need of the term.

Detail Report

CR Number: 2025335019 **Implementation Date:** 05-Dec-25 Related CR: 2025335019

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Exposure by child after cutaneous drug administration by parent*	Rejected		

MSSO Comment: The proposal to add a new term Exposure by child after cutaneous drug administration by parent is not approved. The proposed scenario can be represented with existing MedDRA terms. It is a combination of PT Accidental exposure to product by child and with PT Exposure via skin contact, depending on the context of the case report. Section 3.5 of the MedDRA Term Selection Points to Consider (MTS:PTC) document defines these as "combination terms" and provides coding guidance.

CR Number: 2025335020 **Implementation Date:** 04-Dec-25 Related CR: 2025335020

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Burnt-like appearance*	Rejected		

MSSO Comment: The proposal to add a new LLT Burnt-like appearance is not approved. Please provide additional information as to the appearance of the "burn-like" skin so the term concept may be medically relevant. Many skin conditions such as allergic eczema and rashes may appear like "burns". Please provide references for the use of this term as a medical concept.

CR Number: 2025335021 **Implementation Date:** 04-Dec-25 Related CR: 2025335021

Change Requested	Add a New Term	Final Disposition	Final Placement	MedDRA Code #
Proposed Term	*Shiny skin*	Rejected		

MSSO Comment: The proposal to add a new term Shiny skin is not approved. All healthy skin has some shine and natural glow, except for dry skin, which does not shine. The natural glow and shine means that sebum production is normal. Shiny skin develops into problems when it becomes oily skin. Abnormal shiny appearance of skin can result from multiple, clinically distinct processes, such as lymphedema, scleroderma, venous stasis, or neuropathic changes. Without precise descriptors, it can lead to variable interpretation and offers limited diagnostic usefulness.

Detail Report

CR Number: 2025335026 **Implementation Date:** 05-Dec-25 Related CR: 2025335026

Change Requested	Add a New PT	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Penile aneurysm*	Rejected		
HLT primary	*Aneurysms and dissections site specific NEC*			
SOC primary	*Vascular disorders*			

MSSO Comment: The proposal to add a new PT Penile aneurysm to primary HLT Aneurysms and dissections site specific NEC in SOC Vascular disorders and secondary HLT Penile disorders NEC (excl erection and ejaculation) in SOC Reproductive system and breast disorders is not approved. There is no well-defined entity in the literature corresponding to a true penile aneurysm. What is actually described is the related (but different) traumatic pseudoaneurysm of the dorsal or cavernosal artery after trauma, surgery, or injection. True arterial aneurysms of the penis do not exist as a recognized diagnosis, and when the term aneurysm appears, it almost always refers to a pseudoaneurysm. Additionally, some papers use the word aneurysm for a different issue: bulging of a penile prosthesis cylinder, not a vascular lesion. Please resubmit with medical references for the submitted concept term.

CR Number: 2025336001 **Implementation Date:** 05-Dec-25 Related CR: 2025336001

Change Requested	Promote an LLT	Final Disposition	Final Placement	MedDRA Code #
Proposed LLT	*Device migration*	Suspended		
From PT	*Device dislocation*			

MSSO Comment: The proposal to promote the LLT Device migration from PT Device dislocation is suspended. The MSSO would like to take additional time to study this proposed change. You will be notified once a decision has been made on the disposition of your request.

CR Number: 2025343001 **Implementation Date:** 10-Dec-25 Related CR: 2025343001

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Anti-microbial drug ineffective*	Approved Not as Requested	Proposed LLT		
To PT	*Drug ineffective*		*Antimicrobial drug ineffective*	10093400	Current
			To PT		
			Drug ineffective	10013709	

MSSO Comment: The proposal to add a new LLT Anti-microbial drug ineffective to PT Drug ineffective is approved but not as requested. Antimicrobials in contrast to other drugs, are subject to specific monitoring for their continued efficacy after approval. Emergence of antimicrobial resistance stems from an interplay of microbe-related, patient-related, and drug-related factors, which make monitoring efficacy in this group of drugs unique and important. The proposed term is clinically relevant because antimicrobial inefficacy may have multiple mechanisms, including but not limited to resistance. Treatment failure with antimicrobials may arise from inappropriate drug–pathogen matching, inadequate dosing, impaired drug absorption or distribution, host factors (such as immunosuppression), or the presence of mixed or atypical infections. For this reason, the inclusion of Antimicrobial drug ineffective provides a necessary level of specificity within the broad category of lack of efficacy, allowing cases related to antimicrobial treatment failure to be clearly distinguished from inefficacy associated with other therapeutic areas. The proposed term will be modified without the hyphen and added as LLT Antimicrobial drug ineffective to PT Drug ineffective.

Detail Report

CR Number: 2025343002 **Implementation Date:** 10-Dec-25 Related CR: 2025343002

Change Requested	Add a New LLT	Final Disposition	Final Placement	MedDRA Code #	
Proposed LLT	*Heteroresistance*	Approved as Requested	Proposed LLT		
To PT	*Pathogen resistance*		*Heteroresistance*	10093399	Current
			To PT		
			Pathogen resistance	10034133	

MSSO Comment: The proposal to add a new LLT Heteroresistance to PT Pathogen resistance is approved as requested. Heteroresistance is a phenomenon in which a preexisting subpopulation of resistant bacterial cells can rapidly replicate in the presence of a given antibiotic, whereas the majority population of susceptible bacterial cells is killed.

CR Number: 2025346001 **Implementation Date:** 16-Dec-25 Related CR: 2025346001

			Term_weight	
			0	

MSSO Comment: The proposal to add PT PCDH19 gene-related epilepsy to Congenital, familial and genetic disorders (SMQ) as a Narrow term is approved as requested. This term fits the inclusion criteria for this SMQ which includes all PTs in SOC Congenital, familial and genetic disorders. All terms in this SMQ are narrow in scope.

CR Number: 2026007007 **Implementation Date:** 09-Jan-26 Related CR: 2026007007

Term scope	*Narrow*		To SMQ	
			Optic nerve disorders (SMQ)	20000148
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Optic nerve calcification to Optic nerve disorders (SMQ) as a Narrow term is approved as requested. Optic nerve calcification involves the deposition of calcium within or around the optic nerve, most commonly seen as optic nerve head drusen, and can be detected on CT scans or ophthalmoscopic examination. While often asymptomatic, it can sometimes cause visual field defects or mimic optic disc swelling, with management ranging from observation to intervention if associated with compressive lesions. Optic nerve calcification will be added to the narrow scope of Optic nerve disorders (SMQ).

To SMQ	*Gastrointestinal nonspecific dysfunction (SMQ)*		*Intestinal failure*	10093246
Term scope	*Broad*		To SMQ	
			Gastrointestinal nonspecific dysfunction (SMQ)	20000139
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Intestinal failure to Gastrointestinal nonspecific dysfunction (SMQ) as a Broad term is approved as requested. The European Society for Clinical Nutrition and Metabolism defined intestinal failure (IF) as "the reduction of gut function below the minimum necessary for the absorption of macronutrients and/or water and electrolytes, such that intravenous supplementation is required to maintain health and/or growth". This SMQ gathers any nonspecific functional condition affecting any part of the gastrointestinal tract. However, this SMQ is constructed around symptoms frequently attributed to drugs, (e.g., nausea, vomiting, dyspepsia, gastroesophageal reflux disease, diarrhea and constipation), whereas intestinal failure occurs in conditions needing or resulting from surgery, short bowel syndrome being its most frequent cause. For all the reasons above, this term will be added in the broad scope of the SMQ.

MSSO Comment: The proposal to add PT Hyaline occlusive glomerular microangiopathy to Acute renal failure (SMQ) as a Broad term is approved as requested. Hyaline occlusive glomerular microangiopathy will be added in Broad scope as Hyaline occlusive glomerular microangiopathy differs from thrombotic microangiopathy and includes hyaline pseudothrombi pathology. Recent studies have shown that severe kidney-specific endothelial injury may be responsible for the development of this unique extracapillary glomerulopathy as a side effect of certain treatments especially in cancer therapy.

MSSO Comment: The proposal to add PT Pachychoroid pigment epitheliopathy to Retinal disorders (SMQ) as a Narrow term is approved as requested. Pachychoroid pigment epitheliopathy is a condition characterized by a thickened, hyperpermeable choroid and mild alterations of the retinal pigment epithelium without subretinal fluid. It is considered the earliest stage of the pachychoroid spectrum and can progress to central serous chorioretinopathy, in which dysfunction of the retinal pigment epithelium leads to fluid leakage and serous retinal detachment. Pachychoroid pigment epitheliopathy will be added to the narrow scope of Retinal disorders (SMQ).

			Opportunistic infections (SMQ)	20000235
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Cytomegalovirus respiratory tract infection to Opportunistic infections (SMQ) as a Narrow term is approved as requested. Although cytomegalovirus (CMV) respiratory tract infection is a broad term, when it is used without further specification it most frequently refers to an infection in an immunocompromised host, since in the immunocompetent patient, CMV may be detected in the respiratory tract as subclinical replication or an incidental finding, without true pathogenic significance. In contrast, in immunocompromised patients this broad term may be used to refer to CMV pneumonitis, which is a significant lung disease that requires specific antiviral treatment. The term will be added to the narrow scope of the SMQ, like other CMV infection sites already included.

To SMQ	*Sexual dysfunction (SMQ)*		*Retrograde ejaculation*	10038967
Status	*I*		To SMQ	
			Sexual dysfunction (SMQ)	20000238
			Status	
			I	

MSSO Comment: The proposal to Change status of the term Retrograde ejaculation in Sexual dysfunction (SMQ) to Inactive is approved as requested. Including PT Retrograde ejaculation under Sexual dysfunction (SMQ) is inappropriate because it does not represent a decrease in sexual desire, arousal, or orgasmic capacity, which are the core elements targeted by this SMQ. Its underlying mechanism is peripheral and mechanical, related to failure of bladder neck closure, rather than the central neuropsychophysiological disturbances that define medication-induced sexual dysfunction. Retrograde ejaculation is primarily a fertility issue with preserved orgasmic sensation, not a disorder of sexual experience or response. Retrograde ejaculation is mainly produced by drugs that impair sympathetic (α-adrenergic) tone at the bladder neck, the main categories of which are α-1 adrenergic blockers used for lower urinary tract symptoms/BPH. Differently, Sexual dysfunction (SMQ) was mainly created for drug-induced sexual dysfunction.

			Cardiomyopathy (SMQ)	20000150
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Atrial electromechanical dissociation to Cardiomyopathy (SMQ) as a Broad term is approved as requested. Atrial electromechanical dissociation (EMD) could be seen as a significant indicator of cardiomyopathy, particularly in the context of cardiac amyloidosis. It is characterized by a decrease in mechanical activity of the atria, which can be observed during atrial fibrillatiom (AF). This dissociation is associated with atrial myopathy and can be an early prognostic indicator for rhythm control in patients with AF. The presence of atrial EMD suggests that the atria may be unable to maintain a contractile function, which can lead to atrial standstill and subsequent complications such as atrial thrombi. Therefore, identifying atrial EMD can play an important role in diagnosing and managing cardiomyopathy, especially in patients with cardiac amyloidosis. The PT Atrial electromechanical dissociation will be added to the Broad scope of this SMQ.

			Term_weight *0*	

MSSO Comment: The proposal to add PT Soluble ST2 increased to Myocardial infarction (SMQ) as a Broad term is approved as requested. The demoted PT Soluble suppression of tumourigenicity 2 elevated was previously linked under Broad scope to this SMQ as studies have reported that serum sST2 levels may be higher after MI, especially in the post-acute phase after 3-5 days. Elevated ST2 levels are often associated with poor prognosis and may be used to evaluate risk of death or heart failure after MI. Accordingly, the PT Soluble ST2 increased will be added to this SMQ within the broad scope.

			Term_category *A*	
			Term_weight *0*	

MSSO Comment: The proposal to add PT Early infantile developmental and epileptic encephalopathy to Noninfectious encephalopathy/delirium (SMQ) as a Narrow term is approved as requested. Early infantile developmental and epileptic encephalopathy (EIDEE) is a rare form of neonatal epilepsy occurring in 10 in 100,000 live births. EIDEE was previously known as Ohtahara syndrome. Children with EIDEE may have frequent and drug-resistant seizures in the first 3 months of life and may also have an abnormal neurological exam even before their seizures start. Many also have abnormal EEG findings between seizures. Family history, birth, and birth history are often normal for infants with this condition. In up to 80% of patients, EIDEE is caused by an underlying structural, genetic, or metabolic reason. A causative genetic change is found in more than half of babies. The outlook for infants with EIDEE is often poor. Many children progress to have infantile epileptic spasms syndrome (West Syndrome) or Lennox-Gastaut syndrome (LGS). Some children with EIDEE syndrome may die early in life usually due to lung infections related to severe disability. Those who survive are typically left with severe physical and cognitive disabilities. This disorder, which has multiple non-infectious etiologies, describes a specific type of encephalopathy and meets criteria for inclusion in the narrow search terms of this SMQ.

			Accidents and injuries (SMQ)	20000135
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Traumatic abdominal evisceration to Accidents and injuries (SMQ) as a Narrow term is approved as requested. Traumatic abdominal evisceration is the forcible and violent rupture or removal of internal abdominal organs due to an external injury, accident, or violent assault. It typically results in severe hemorrhaging, shock, and is often immediately life-threatening. This term, which describes a specific type of traumatic injury, meets the criteria for inclusion in the narrow search terms of this SMQ.

CR Number: 2026007033 **Implementation Date:** 09-Jan-26 Related CR: 2026007033

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Temporoparietooccipital disconnection surgery*	Approved as Requested	Proposed PT	
To SMQ	*Convulsions (SMQ)*		*Temporoparietooccipital disconnection surgery*	10093320
Term scope	*Broad*		To SMQ	
			Convulsions (SMQ)	20000079
			Term scope	
			Broad	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Temporoparietooccipital disconnection surgery to Convulsions (SMQ) as a Broad term is approved as requested. Temporoparietooccipital disconnection surgery removes the front portion of the temporal lobe and disconnects the occipital and parietal lobes. This procedure is indicated for select children with refractory focal or generalized seizures with localization to the posterior quadrant on one side, with or without a discrete lesion on MR imaging. This term, which describes a specific surgery for the treatment of epilepsy, meets the criteria for inclusion in the broad search terms of this SMQ.

Detail Report

CR Number: 2026007034 **Implementation Date:** 09-Jan-26 Related CR: 2026007034

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Absence to tonic clonic seizure*	Approved as Requested	Proposed PT

			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Absence to tonic clonic seizure to Convulsions (SMQ) as a Narrow term is approved as requested. An absence to tonic clonic seizure is a generalized seizure that starts with a typical absence (brief impaired awareness with staring) and then evolves directly into a generalized tonic-clonic seizure. The absence phase is short and functions as the initial ictal onset, after which tonic stiffening and clonic jerking appear as part of the same continuous seizure event. This term, which describes a specific type of seizure, meets the criteria for inclusion in the narrow search terms of this SMQ.

CR Number: 2026007035 **Implementation Date:** 09-Jan-26 Related CR: 2026007035

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #

MSSO Comment: The proposal to add PT Bilateral tonic clonic seizure to Convulsions (SMQ) as a Narrow term is approved as requested. Bilateral tonic clonic seizure is a whole-body seizure involving rigid tonic phase (stiffening) and a rhythmic, jerking clonic phase, leading to loss of consciousness. This term, which describes a specific type of seizure, meets the criteria for inclusion in the narrow search terms of this SMQ.

Detail Report

CR Number: 2026007036 **Implementation Date:** 09-Jan-26 Related CR: 2026007036

Term scope	*Narrow*		Term scope *Narrow*	
			Term_category *A*	
			Term_weight *0*	

MSSO Comment: The proposal to add PT Developmental and epileptic encephalopathy with spike-and-wave activation in sleep to Convulsions (SMQ) as a Narrow term is approved as requested. Developmental and epileptic encephalopathy with spike-and-wave activation in sleep is one of a group of conditions associated with variable degrees of cognitive, language, behavioral, and motor regression with marked spike-wave activation in sleep. This term, which describes a specific disorder associated with seizure activity, meets the criteria for inclusion in the narrow search terms of this SMQ.

CR Number: 2026007037 **Implementation Date:** 09-Jan-26 Related CR: 2026007037

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #

CR Number: 2026007038 **Implementation Date:** 09-Jan-26 Related CR: 2026007038

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Epileptic negative myoclonus*	Approved as Requested	Proposed PT	
To SMQ	*Convulsions (SMQ)*		*Epileptic negative myoclonus*	10093386
Term scope	*Narrow*		To SMQ	
			Convulsions (SMQ)	20000079
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Epileptic negative myoclonus to Convulsions (SMQ) as a Narrow term is approved as requested. Epileptic negative myoclonus is a brief, involuntary loss of muscle tone caused by a transient interruption of cortical motor output due to an epileptic discharge. Epileptic negative myoclonus is not a distinct epilepsy syndrome, but rather a motor seizure descriptor that can appear in several epileptic syndromes. This term, which describes a motor epilepsy-related event, meets the criteria for inclusion in the narrow search terms of this SMQ.

CR Number: 2026007039 **Implementation Date:** 09-Jan-26 Related CR: 2026007039

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Ictal paresis*	Approved as Requested	Proposed PT	
To SMQ	*Convulsions (SMQ)*		*Ictal paresis*	10093388

			Convulsions (SMQ)	20000079
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Ictal paresis to Convulsions (SMQ) as a Narrow term is approved as requested. Ictal paresis is a rare phenomenon that is characterized by weakness or paralysis of a part of the body. Ictal paresis must be differentiated from ictal akinesia and ictal immobile limb in patients with temporal lobe epilepsy. Ictal paresis is almost always contralateral to the seizure onset zone and is likely to be produced by seizures that occur in close vicinity to the primary motor cortex.This term, which describes a motor epilepsy-related event, meets the criteria for inclusion in the narrow search terms of this SMQ.

Detail Report

CR Number: 2026007040 **Implementation Date:** 09-Jan-26 Related CR: 2026007040

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Myoclonic tonic clonic seizure*	Approved as Requested	Proposed PT	
To SMQ	*Convulsions (SMQ)*		*Myoclonic tonic clonic seizure*	10093389
Term scope	*Narrow*		To SMQ	
			Convulsions (SMQ)	20000079
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Myoclonic tonic clonic seizure to Convulsions (SMQ) as a Narrow term is approved as requested. A myoclonic tonic clonic seizure is a generalized seizure that begins with myoclonic jerks (brief, shock-like muscle contractions), followed immediately by a tonic phase with sustained muscle stiffening, and then a clonic phase with rhythmic jerking. It reflects a sequential activation of generalized myoclonic, tonic, and clonic motor patterns within a single seizure event. This term, which describes a specific seizure type, meets the criteria for inclusion in the narrow search terms of this SMQ.

CR Number: 2026007041 **Implementation Date:** 09-Jan-26 Related CR: 2026007041

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Bilateral tonic clonic seizure*	Approved as Requested	Proposed PT	
To SMQ	*Generalised convulsive seizures following immunisation (SMQ)*		*Bilateral tonic clonic seizure*	10093387
Term scope	*Narrow*		To SMQ	
			Generalised convulsive seizures following immunisation (SMQ)	20000212
			Term scope	
			Narrow	
			Term_category	
			A	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Bilateral tonic clonic seizure to Generalised convulsive seizures following immunisation (SMQ) as a Narrow term is approved as requested. The generalized seizures which occur post-immunization are classically generalized tonic-clonic febrile seizures (presumably triggered by the vaccine), related to the rapid rise of temperature. They are usually self-limited and do not recur, unless there is another subsequent temperature spike. Bilateral tonic clonic seizures, when associated with impaired consciousness and awareness, are synonymous with the generalized tonic clonic seizure concept and this term will be added to the narrow search terms of this SMQ.

CR Number: 2026007042 **Implementation Date:** 09-Jan-26 Related CR: 2026007042

Change Requested	Change term status in a SMQ	Final Disposition	Final Placement	MedDRA Code #
Proposed PT	*Hypotonia neonatal*	Approved as Requested	Proposed PT	
To SMQ	*Hypotonic-hyporesponsive episode (SMQ)*		*Hypotonia neonatal*	10021119
Status	*A*		To SMQ	
			Hypotonic-hyporesponsive episode (SMQ)	20000211
			Status	
			A	

MSSO Comment: The proposal to change status of the term Hypotonia neonatal in Hypotonic-hyporesponsive episode (SMQ) to Active is approved as requested. Hypotonia is a clinical hallmark of the Brighton Collaboration algorithm of diagnostic certainty for identification of a hypotonic-hyporesponsive episode. As many neonates receive immunizations as a recognized standard of care, these episodes can be seen within this population. The term (Hypotonia neonatal) will have its status changed to "Active" and will inherit the Category B search status already assigned to it for this SMQ.

CR Number: 2026007043 **Implementation Date:** 09-Jan-26 Related CR: 2026007043

Change Requested	Add term to SMQ	Final Disposition	Final Placement	MedDRA Code #

			Hypotonic-hyporesponsive episode (SMQ)	20000211
			Term scope	
			Broad	
			Term_category	
			B	
			Term_weight	
			0	

MSSO Comment: The proposal to add PT Floppy infant to Hypotonic-hyporesponsive episode (SMQ) as a broad term is approved but not as requested. Hypotonia (i.e., decreased muscle tone, or floppiness) is a clinical hallmark of the Brighton Collaboration algorithm of diagnostic certainty for identification of a hypotonic-hyporesponsive episode. As many infants receive immunizations as a recognized standard of care, these episodes can be seen within this population. Floppy infant will have the Category selection be changed from -1 to B for this SMQ.
